DELIVERABLE STYLE GUIDE

Governing provision

Severity terms are defined by fund policy; produce the required registers and model schedules.

Controls, Exceptions, and Version Administration

Deliverable Style Guide identifies its authority, effective date, scope, defined terms, mandatory controls, evidence owners, approvers, escalation paths, exceptions, monitoring, and version history.

An exception requires written rationale, compensating controls, approval, expiry, and continuing monitoring; a prior exception does not create a standing waiver.

Superseded drafts remain available for history but do not control a current transaction merely because they contain later edits or more detailed examples.

Section 1. Standing of this Guide and the Governing Edition

1.1 This guide states the required form of every deliverable the firm issues from an investment or monitoring engagement. Edition 9 was approved on 2026-02-23 and has been in force since 2026-03-02. The most recently published edition of this guide governs the form of a deliverable issued on or after its effective date; an earlier edition retained in the firm's records is an archive copy and governs only a deliverable issued while it was in force.

1.2 A deliverable is judged against the edition in force on the date it is issued, not the date the engagement began. Where an engagement spans an amendment, the preparer applies the new edition from its effective date and states in the deliverable that both editions applied during the engagement; the preparer may not complete an engagement under a superseded edition because it was the edition in force when the work started.

1.3 Form is not decoration. A deliverable that reaches a correct conclusion in a form this guide prohibits is returned unissued, because the form is what allows a reader who was not present to test the conclusion. The senior reviewer refuses issue rather than issuing with a note about the form, and the refusal is recorded.

1.4 Where this guide and an engagement letter conflict on the form of a deliverable, the engagement letter governs to the extent of the conflict and the preparer records the conflict in the deliverable. Where this guide and another internal policy conflict on a matter of substance rather than form, the other policy governs and this guide yields.

Section 2. Required Work Product and the Deliverable Register

Each engagement produces the deliverables listed for it in the engagement letter, and at a minimum the deliverables marked as always required in the register to this section. A deliverable that the engagement does not require is not produced; a deliverable the engagement requires and the preparer cannot produce is reported as not produced, with the reason, rather than replaced by an approximation.

The fields of each register and schedule are specified in the schedule the deliverable register names for it, and not in this guide. The preparer takes the field list from that schedule in the edition in force, produces every field it specifies, and records the schedule edition on the face of the register. A register missing a specified field is incomplete whether or not the missing field has content.

A register is produced as a register even where it has one row or none. An empty register states that it is empty and why, because an omitted register cannot be distinguished by a reader from an overlooked one. The senior reviewer checks specifically for omitted registers before issue and records the check.

Deliverables are issued as a set with a single issue date, and a deliverable issued separately is identified as a supplement to a named set. Reissuing one deliverable from a set without identifying the set is prohibited, because the reader cannot then tell which other deliverables the reissued one is consistent with.

Register 2.5 - Required work product, ownership and where its fields are specified

Ref	Deliverable	Form	Prepared by	Reviewed by	Fields specified in
D-01	Findings register	Tabular register, one row per finding	Engagement reviewer	Senior reviewer	Schedule F

Ref	Deliverable	Form	Prepared by	Reviewed by	Fields specified in
D-02	Discrepancy schedule	Tabular register maintained under the review protocol	Reviewer	Senior reviewer	Review protocol section 8
D-03	Capitalization schedule	Tabular schedule with an instrument reference per line	Deal analytics	Transaction counsel	Schedule C
D-04	Reserve schedule	Tabular schedule by position	Reserve analyst	Chief financial officer	Reserve policy schedules
D-05	Deviation register	Tabular register, one row per deviation	Engagement reviewer	Chief compliance officer	Schedule S
D-06	Evidence index	Index of every document cited in the deliverable	Preparer	Senior reviewer	Schedule E
D-07	Reconciliation statement	Statement tying reported figures to their source	Fund controller	Chief financial officer	Conventions memorandum section 10
D-08	Model documentation pack	Inputs list, conventions declaration and change log	Model owner	Head of valuation	Conventions memorandum section 11
D-09	Narrative memorandum	Prose memorandum with cited findings	Preparer	Senior reviewer	This guide, sections 3 and 4
D-10	Open items list	List of unresolved matters with owners	Preparer	Senior reviewer	This guide, section 8

Section 3. Structure and Ordering Within a Deliverable

A deliverable follows the order in the table to this section. The order is mandatory because it puts the scope and the limitations in front of the conclusions; a deliverable that opens with its conclusions invites a reader to stop before reaching the limitations that qualify them.

Findings appear in the order of the findings register and not in the order they were discovered or the order of the documents they came from. The register order is fixed when the register is closed for issue, and a finding added afterwards is added at the end with its own reference rather than inserted, so that references in correspondence remain resolvable.

A conclusion may not appear anywhere other than in the conclusions section and the register entry it corresponds to. In particular a conclusion may not be introduced in the scope section, in a footnote to a schedule, or in a covering note; a reader who reads the deliverable in order must encounter every conclusion in the place this guide puts them.

Table 3.4 - Mandatory order of the parts of a deliverable

Position	Part	Required	Rule applied to this part
1	Statement of what was asked and what was delivered	Always	One paragraph; no findings stated here
2	Scope, sources examined, and limitations	Always	Limitations stated affirmatively, never implied by omission
3	Conclusions, each with its severity term and citation	Always	No conclusion without both
4	Findings in the order of the register, not of discovery	Always	Register order is the authoritative order
5	Registers and schedules required by the engagement	Where required	Each with the fields its schedule specifies
6	Open items and matters escalated but not resolved	Always	Empty list stated as empty, never omitted
7	Evidence index	Always	Every citation in the body appears here
8	Reviewer identification and date of issue	Always	Preparer and reviewer both named

Section 4. Evidencing a Finding

A finding states what was found, the evidence it rests on, and the consequence the preparer draws from it. All three are required: a statement without evidence is an assertion, evidence without a consequence leaves the reader to draw the conclusion the preparer declined to draw, and a consequence without a statement of what was found cannot be tested.

The evidence required for each kind of assertion is set out in the matrix to this section, and the matrix states what is not sufficient as well as what is. Where the preparer cannot obtain the evidence the matrix requires, the finding is stated as unevidenced and appears in the open items list; it is not downgraded to a lower severity term to reflect the weakness of the evidence, because severity describes the matter and not the preparer's confidence.

A finding may not cite a document the preparer has not examined. Where the preparer relies on another person's examination, the reliance is disclosed with the name of that person and the date of their examination, and the finding states what the reliance covers. Reliance on a data room index, a document list or a counterparty's description of a document is never sufficient.

Where two findings rest on the same evidence, each cites the evidence in full rather than cross-referring to the other. The evidence index resolves the duplication for the reader; the body of the deliverable must remain readable in any order, because reviewers and readers frequently read a single finding on its own.

A finding states what was found rather than what the preparer recommends be done about it. Where the engagement asks for a recommendation, the recommendation is a separate statement that names the findings it rests on, so that a reader who disagrees with the recommendation can still use the findings. Merging the two produces a deliverable whose findings cannot be separated from the preparer's view of them.

A negative finding is stated as positively as a positive one. Where the preparer examined a matter and found nothing, the deliverable says what was examined, how, and that nothing was found; silence about an examined matter is read by every reader as an omission rather than as a clean result, and the firm has been asked to re-perform work for that reason alone.

The consequence a finding draws must be within the preparer's competence and must say whose question it answers. A finding on a legal question drawn by a person who is not counsel states that counsel has not been asked; a finding on a valuation question drawn without the valuation team states the same. The limitation belongs in the finding rather than in a general disclaimer at the front of the deliverable.

Evidence obtained under a restriction carries the restriction with it. Where a document was made available for inspection but not for copying, or was provided on terms that limit onward reference, the finding records the restriction and the evidence index records that the document is not held; a citation that implies the firm holds a document it inspected only once is misleading about what could be re-examined.

Table 4.5 - Evidence required by kind of assertion

Assertion	Evidence required	Citation must contain	Not sufficient
A term of the transaction	The governing instrument identified by class and date	Instrument name, clause, execution date	A summary or register alone
A figure derived by computation	The model version and the tie-out evidence	Model reference, version, tie-out reference	A figure quoted without its model
A figure taken from a document	The document and the page it appears on	Document name, page, date	A recollection of the figure
A governance authority	The resolution or consent and the charter provision	Resolution date, charter article	An officer's oral assurance
A date	The document bearing the date and which date it is	Document, date type, date	A file name or folder date
An absence of a document	The record of the search performed	Search scope, date, searcher	A statement that none was found
A policy requirement	The policy edition in force for the matter	Policy name, edition, effective date	A citation without the edition
A third party conclusion	The report and the basis stated in it	Report name, as-of date, stated basis	The conclusion restated without its basis

Governing provision and cross-references

Severity terms are defined by fund policy; produce the required registers and model schedules.

This provision is read with the defined terms, the schedules to this instrument, and any consent or waiver recorded against it; a summary prepared from it does not vary it.

Section 5. Severity Terms: Source, Assignment, and Use

5.1 Severity terms are drawn from a closed list held in Schedule S to this guide, and each term is defined in that schedule. The definitions are not restated here and may not be restated in a deliverable: a deliverable that paraphrases a definition creates a second definition, and a reader comparing two deliverables can no longer tell whether the same term was applied to the same standard.

5.2 A preparer may use only a term that appears in the closed list, and must use the term whose schedule definition the finding meets. A term may not be softened or intensified by an adverb, may not be combined with another term, and may not be qualified by a phrase that narrows the schedule definition. Where the preparer believes no term in the list fits the finding, the preparer escalates to the chief compliance officer, who either identifies the term that applies or initiates an amendment to Schedule S; the preparer may not coin a term in the meantime.

5.3 Every finding carries exactly one severity term, assigned by the preparer and confirmed by the senior reviewer. Where the two disagree, the disagreement is escalated and resolved before issue, and the deliverable records only the resolved term; a deliverable may not present two candidate terms or express the term as a range.

5.4 A term in the closed list that no finding in the engagement meets is not used at all. A preparer may not apply a term for emphasis, for consistency with a previous engagement, or because the term appeared in a source document; the source document's own characterisation of a matter is quoted as a quotation and is not adopted as the firm's severity assignment.

5.5 The deviation register records, for each entry, the severity term assigned and the evidence the assignment rests on. The chief compliance officer reviews the register before issue against the closed list, and a term outside the list stops the issue; the officer records the stop and the correction so the frequency of the error is visible across engagements.

Section 6. Citation Form for Source Documents

A citation identifies a document precisely enough that a reader with access to the same sources can retrieve it and reach the same place in it. The elements required for each type of source are in the table to this section; a citation missing a required element is incomplete even where the document is obvious from the context of the deliverable.

Citations to internal policies must state the edition and the effective date, because a policy citation without an edition does not identify a rule. Where the matter cited was decided under a superseded edition, the citation gives that edition and states that it was the edition in force for the matter, and the reader is not left to infer it from the date of the deliverable.

A citation to a document the firm did not receive in its final form states the form received. A draft is cited as a draft with its circulation date; an extract is cited as an extract with the document it was extracted from; an unsigned counterpart is cited as unsigned. The document review protocol governs what may be concluded from each, and the citation form is what allows the reader to apply it.

Every citation in the body of a deliverable appears in the evidence index, and every entry in the index is cited somewhere in the body. The senior reviewer tests the correspondence in both directions before issue, since an index entry that nothing cites usually marks a finding that was removed without its evidence being removed.

Table 6.5 - Citation elements required by source type

Source type	Elements required	Rule on form
Executed agreement	Document title, execution date, clause reference	Cite the clause, never the page alone
Charter or constitutional document	Document title, filing date, article and section	Cite the article; a page reference is insufficient
Board or stockholder resolution	Body, date of the resolution, resolution reference	Identify whether minuted or by written consent
Exhibit or schedule	Parent instrument, exhibit designation, and the exhibit's own reference	The parent instrument is always named first
Certificate	Officer, capacity, date, and the fact certified	Cite the fact, not merely the certificate
Third party report	Author, report title, as-of date, page	As-of date and preparation date both given where they differ
Internal register or model	Register or model name, version, and the line or cell	The primary source is cited alongside
Correspondence	Author, recipient, date, and that it is correspondence	Cited only for chronology or for the fact that it exists

Source type	Elements required	Rule on form
Internal policy	Policy name, edition, effective date, section	Edition and effective date are mandatory

Section 7. Register and Schedule Field Discipline

A register field is completed, or it carries the reason it is not completed. A blank cell is prohibited: where a value does not exist the register states that it does not exist, and where the preparer could not establish it the register states that it could not be established. The two are different facts and a reader who sees a blank cannot tell which applies.

A field takes the form the specifying schedule states for it. A date field carries a date and not a description of a date; a reference field carries a reference that resolves; a term field carries a term from the applicable closed list. A field that carries prose where the schedule specifies a value is corrected before issue rather than annotated.

Rows are records and are not summaries. A register may not carry a row that aggregates other rows, and a total is presented outside the register or in a clearly identified total row that no reference points to. This keeps a register countable, which is what allows a reviewer to test completeness against the source population.

Where a register is restated, the restated version carries a new date and the previous version is retained. Row references are stable across restatements: a row is never renumbered, and a row removed on restatement is retained with its reference and marked as removed with the reason.

Section 8. The Completeness Standard

A deliverable is complete when it states everything the engagement required, everything the preparer found that a reasonable reader of the deliverable would want to know, and everything the preparer could not establish. The third limb is the one most often failed: a deliverable that is silent about what it could not establish presents itself as more complete than it is.

Completeness is tested against the engagement letter and the open items list, not against the preparer's sense of having covered the ground. The senior reviewer works through the engagement letter requirement by requirement and marks each as delivered or not delivered, and the marked copy is retained with the deliverable as the evidence that the test was performed.

An open item is a matter the engagement required and the preparer could not close. Each open item names the matter, what was attempted, what is needed to close it, and who owns it; an open item without an owner is escalated to the senior reviewer, who assigns one before issue. The list is produced even where it is empty, and an empty list says so.

A matter escalated during the engagement appears either as a finding or as an open item, and never disappears. The senior reviewer reconciles the escalations raised during the engagement against the deliverable before issue, and an escalation that appears in neither place is added; the reconciliation is retained.

Completeness is not the same as length, and a deliverable is not made more complete by restating material available elsewhere. Where the reader will need a document the firm holds, the deliverable cites it; where the reader will need a computation, the deliverable cites the model. A deliverable that reproduces its sources at length buries the findings that are the reason it exists, and the senior reviewer returns it for that reason as readily as for an omission.

A matter outside the engagement that the preparer nonetheless noticed is reported. It appears as a finding marked as outside scope, with a statement that the firm did not examine it and does not express a conclusion on it. The firm treats a noticed matter withheld because it was outside scope as a more serious failure than a matter never noticed, since the preparer made a judgement the reader was entitled to make.

Where the engagement could not be completed as scoped, the deliverable says so in the scope section rather than in the open items list alone. A reader who reaches the open items list has already read the conclusions, and a conclusion drawn on an incomplete scope is qualified by that fact from the moment it is read.

Section 9. Quantitative Presentation and Cross-Reference to the Conventions

Every figure in a deliverable is presented on the conventions the modelling conventions memorandum states, at the precision its schedules assign, with its unit and its scale declared. A figure presented on any other basis is corrected before issue, and the preparer may not resolve a difference between two figures by presenting them at different precisions.

A figure taken from a model cites the model and the version. A figure taken from a document cites the document and the page. A figure the preparer computed within the deliverable itself is shown with its inputs, because a deliverable is not a model and a computation buried in its prose cannot be re-performed.

Where a figure is stated in a currency other than the reporting currency, both the source amount and the translated amount are shown, and the translation cites the designated rate source and the date used. The preparer does not present the translated figure alone, even where the source amount appears elsewhere in the deliverable.

Section 10. Review, Sign-off, and Issue

A deliverable is reviewed by a senior reviewer who did not prepare it, against the tests in the table to this section. Each test is recorded as performed, and the record accompanies the issue; a review recorded as complete without the individual tests is not a review for the purposes of this guide and does not support issue.

Issue is the act of transmitting the deliverable outside the preparing team, and only the senior reviewer may issue. A draft may be shared within the team, marked as a draft on every page; a draft shared outside the team is treated as an issue and the reviewer's tests must have been completed before it is shared.

A deliverable is withdrawn if a test is later found to have failed, and the withdrawal notice identifies what failed and which conclusions are affected. A corrected deliverable is issued as a new issue with its own date, and the withdrawn version is retained; the firm does not replace a file in place, because a reader who quoted the withdrawn version must be able to see what it said.

Table 10.4 - Pre-issue tests, ownership and the effect of failure

Test	Performed by	When	Effect of failure
Every conclusion carries a citation	Senior reviewer	Before issue	Deliverable returned to the preparer
Every citation resolves to an indexed document	Senior reviewer	Before issue	Uncited document added or citation removed
Every severity term used appears in the closed list	Chief compliance officer	Before issue	Term replaced from the list or finding restated
Every register carries the fields its schedule specifies	Senior reviewer	Before issue	Missing field completed, never left blank
Open items list reconciles to escalations raised	Senior reviewer	Before issue	Unlisted escalation added
Figures reconcile to the model versions cited	Fund controller	Before issue	Deliverable held until reconciled
Limitations stated affirmatively	Senior reviewer	Before issue	Implied limitation made explicit
Edition of every policy cited is the edition in force	Chief compliance officer	Before issue	Citation corrected and conclusion revisited

Section 11. Defined Terms and House Style

Deliverable means a document or register issued from an engagement. Finding means a statement of what was found together with its evidence and consequence. Conclusion means the answer to a question the engagement asked. Open item means a matter the engagement required and the preparer could not close. Severity term means a term from the closed list in Schedule S, and closed list means that no other term may be used.

Prose is written in the third person and in complete sentences, and states what was done rather than what is generally done. Passive constructions that hide the actor are avoided: a sentence must say who examined, who certified and who concluded, since a reader cannot test a statement whose author is unnamed. Defined terms are capitalised only where the deliverable itself defines them.

Abbreviations are expanded on first use in every deliverable, not once across a set. Dates are written in full and in one form throughout a deliverable. A quotation from a source document is given verbatim within quotation marks with its citation, and any omission within a quotation is marked; paraphrase presented as quotation is treated as a misstatement of evidence.

Section 12. Administration and Version History

The chief compliance officer administers this guide together with Schedule S, and the head of legal administers the citation forms in section 6. Amendments are published with an effective date and notified to every person who has issued

a deliverable in the preceding period; the notification records who was notified, because the governing-edition rule in section 1 depends on preparers knowing which edition is current.

Superseded editions are retained with the date each ceased to have effect and are marked as archive copies on their face. An archive copy may be used to establish the form required of a deliverable issued while it was in force, and for no other purpose; a preparer who finds a superseded edition in a working folder replaces it with the current edition and reports how it came to be there.

The register of issued deliverables records, for each issue, the deliverable set, the issue date, the preparer, the reviewer, and the edition of this guide applied. The register is reconciled annually to the engagement records, and a deliverable in the engagement records that does not appear in the register is investigated rather than added.

Table 12.3 - Edition history of the deliverable style guide

Edition	Approved	In force from	Principal amendment	Status
Ed. 6	2019-08-13	2019-09-02	Consolidated house style and citation form	Superseded
Ed. 7	2021-12-06	2022-01-10	Evidence matrix introduced; conclusions required to carry citations	Superseded
Ed. 8	2023-05-15	2023-06-05	Severity terms restricted to a closed list held in a schedule	Superseded
Ed. 8 rev 2	2024-08-19	2024-09-09	Completeness standard made testable; open items list mandatory	Superseded
Ed. 9	2026-02-23	2026-03-02	Current edition; ordering, register discipline and issue controls restated	In force

Appendix A. Field forms used in registers and schedules

Every field in a register takes one of the forms below, and the schedule that specifies the register states which form each field takes. This appendix defines the forms; it does not specify any register's fields, and a preparer who cannot find a field in the specifying schedule escalates rather than choosing a form. The purpose of a closed set of forms is that a reader who has read one of the firm's registers can read the next without instruction.

A field that takes a value form carries a value and nothing else. Explanatory text belongs in the field the specifying schedule provides for it, and a preparer who writes an explanation into a value field has made the register uncountable: a reviewer testing completeness cannot distinguish a populated field from a comment. Where no explanation field exists and one is needed, the preparer escalates so the schedule can be extended.

A reference form must resolve. A reference to a document resolves to a document in the evidence index; a reference to another row resolves to a row reference that exists; a reference to a policy resolves to a named edition. The senior reviewer tests a sample of references in every register before issue, and a reference that does not resolve stops the issue rather than generating a note.

Where a field cannot be populated the preparer uses the stated form for an absence, which distinguishes a value that does not exist from one that could not be established. Both are findings in their own right, and a register that blanks them presents itself as more complete than it is; this is the single most common defect the firm finds in its own registers.

Schedule A.1 - Field forms, what each carries and how an absence is shown

Form	What the field carries	How an absence is shown	Common misuse
Date	A single date, written in full	Stated as no date exists, or as not established	A description of a date
Date pair	Two dates, each labelled by type	Each shown separately	One date carried as both
Party	The full legal name of the party	Stated as not identified	A short name or initials
Document reference	Document name and the clause or page	Stated as no document located	A folder or index entry
Row reference	The reference of another row in a named register	Stated as no related row	A description of the other row
Policy reference	Policy name, edition and effective date	Stated as no policy applies	A policy name with no edition
Term from a closed list	One term from the list the schedule names	Stated as no term applies, and escalated	A coined or softened term

Form	What the field carries	How an absence is shown	Common misuse
Amount	A figure with its unit, scale and currency	Stated as not quantified	A figure with an implied unit
Count	An integer	Stated as not counted	A count shown with decimals
Narrative	One or more complete sentences	Stated as not applicable, with the reason	A fragment or a single word
Owner	A named person and their function	Escalated to the senior reviewer for assignment	A function with no name
Status	One value from the lifecycle the schedule states	Stated as not yet started	A status invented for the row

Appendix B. Defects found in the firm's own deliverables

The defects below have each been found in a deliverable this firm issued, and each is recorded with the reader's problem it creates and the test that catches it. The list is used by senior reviewers before issue and by internal review afterwards, and it is extended when a new defect is found rather than on a review cycle.

Most of these defects are failures of form rather than of analysis, which is why this guide treats form as load-bearing. A conclusion with no citation, a register with a blank cell and a limitation left implied are all defects the preparer could see and the reader cannot; the reader instead forms a false impression of how well supported the deliverable is.

Three of the entries concern severity terms, and all three arise from the same cause: a preparer reaching for a word that describes their own confidence rather than the matter. The remedy is the closed list, and the test is mechanical, which is why the chief compliance officer rather than the reviewer performs it.

A defect found after issue is reported with the deliverable, the conclusions affected, and the recipients notified. The firm withdraws and reissues rather than correcting in place, and the report records both dates; a reader who quoted the withdrawn version must be able to see what it said and when it ceased to be the firm's position.

Schedule B.1 - Deliverable defects, the reader's problem and the catching test

Defect	Problem it creates for the reader	Test that catches it	Tested by
Conclusion stated with no citation	The conclusion cannot be tested	Every conclusion carries a citation	Senior reviewer
Citation to a document not in the index	The reader cannot retrieve the source	Citations reconciled to the index	Senior reviewer
Index entry nothing cites	Usually marks a finding removed without its evidence	Index reconciled to the body	Senior reviewer
Blank cell in a register	An absent value and an unestablished one look alike	No blank cells	Senior reviewer
Limitation implied by omission	The deliverable reads as more complete than it is	Limitations stated affirmatively	Senior reviewer
Severity term not in the closed list	Two deliverables cannot be compared	Terms checked against the list	Chief compliance officer
Severity term softened by an adverb	The schedule definition is silently narrowed	Terms checked against the list	Chief compliance officer
Severity term chosen to reflect weak evidence	Severity stops describing the matter	Unevidenced findings appear as open items	Chief compliance officer
Policy cited without its edition	The rule relied on is not identified	Editions checked on every policy citation	Chief compliance officer
Finding cross-referring to another for its evidence	A finding read alone appears unsupported	Each finding cites in full	Senior reviewer
Open items list omitted when empty	The reader cannot tell empty from overlooked	Empty lists stated as empty	Senior reviewer
Figure quoted without its model version	The figure cannot be reconciled	Figures reconciled to cited versions	Fund controller
Register row renumbered on restatement	External references stop resolving	Row references stable across restatements	Senior reviewer
Conclusion introduced in the scope section	The reader meets a conclusion before its qualifications	Ordering test against section 3	Senior reviewer

Appendix C. Competence, attestation, and the register of issues

A preparer may prepare a deliverable at any time, but may not be recorded as its preparer unless holding a current attestation of training on the edition of this guide in force. A senior reviewer may not issue a deliverable without the same attestation and without having reviewed at least one deliverable of the same type in the preceding period. The chief compliance officer maintains the register of attestations.

Attestations are renewed on each amendment of this guide rather than annually. An amendment that changes a requirement without an accompanying attestation cycle produces deliverables prepared under two standards, which is the failure the governing-edition rule in section 1 exists to prevent; the officer therefore reports the completion of the cycle to the committee.

The register of issued deliverables records the set, the issue date, the preparer, the reviewer and the edition of this guide applied. It is reconciled annually to the engagement records, and a deliverable found in the engagement records that is not in the register is investigated as a possible unreviewed issue rather than simply added to the register.

Where a deliverable is prepared by an adviser under an engagement letter, the letter requires this guide to be applied and names the firm's reviewer who will test compliance before issue. The adviser's own house style does not displace this guide; where the adviser's professional obligations require a different form, the difference is agreed in writing before the work begins and is disclosed in the deliverable.

Schedule C.1 - Competence requirements by role

Role	Attestation required	Renewal trigger	Additional requirement	Effect of a lapse
Preparer	Training on the edition in force	Each amendment of this guide	None	May not be recorded as preparer
Senior reviewer	Training on the edition in force	Each amendment of this guide	One deliverable of the type reviewed in the period	May not issue
Severity term reviewer	Training on the closed list schedule	Each amendment of that schedule	None	Issue stops pending review
Fund controller for figures	Training on the conventions memorandum	Each issue of that memorandum	None	Figures unreconciled; issue held
Adviser preparer	Written undertaking in the engagement letter	Each engagement	Named firm reviewer identified	Deliverable returned unissued
Engagement partner	Training on the edition in force	Each amendment of this guide	None	May not approve the engagement letter

Schedule C.2 - Fields of the register of issued deliverables

Field	Content	Completed by
Set reference	The reference of the deliverable set	Senior reviewer
Issue date	The date of transmission outside the preparing team	Senior reviewer
Deliverables in the set	Each deliverable by its register reference	Senior reviewer
Preparer	Named preparer and function	Senior reviewer
Reviewer	Named senior reviewer	Senior reviewer
Guide edition applied	Edition and effective date	Senior reviewer
Pre-issue tests recorded	Reference to the completed test record	Senior reviewer
Withdrawal	Date and reason, where the set was withdrawn	Senior reviewer
Superseding issue	The set reference that replaced this one	Senior reviewer

Appendix D. Marking, distribution, and cross-reference between deliverables

Every deliverable carries a marking that states who may receive it, and the marking appears on every page rather than on a cover sheet. A page separated from its deliverable is the normal way material escapes its intended audience, and a marking on the cover alone does not travel with the page that was copied out of it.

A deliverable prepared for the investment committee is not a deliverable prepared for limited partners, and neither is prepared by editing the other. Where the same finding must appear in both, it is written for each audience and both versions cite the same evidence; the firm does not produce an external document by deleting sections of an internal one, because what is deleted is invisible to the reviewer of the result.

Distribution is recorded. The register of issued deliverables names the recipients of every set, and a recipient added after issue is added to the record with the date. A deliverable found in the hands of a person not on the record is reported to the chief compliance officer as a distribution incident, and the report is made whether or not the person was entitled to receive it.

A cross-reference between deliverables cites the set reference, the deliverable and the row or section, and never a page number alone. Page numbers move on reissue and row references do not, which is why row references are stable across restatements; a cross-reference that has stopped resolving is corrected in the citing deliverable rather than by renumbering the cited one.

Schedule D.1 - Markings, permitted recipients and the rule for each

Marking	Permitted recipients	Rule on further distribution	Applied by
Internal - committee	Committee members and named attendees	No further distribution without the chair	Senior reviewer
Internal - deal team	The named deal team and its reviewers	No distribution outside the team	Preparer
Internal - compliance	Compliance and the general partner	No distribution to a deal team	Chief compliance officer
Confidential - limited partners	Limited partners of the named fund	As the fund agreement permits	Chief financial officer
Confidential - advisory committee	Members of the advisory committee	No further distribution	Chief financial officer
Confidential - counterparty	The named counterparty and its advisers	Subject to the confidentiality undertaking	Transaction counsel
Draft - not for distribution	The preparing team only	Treated as an issue if shared	Preparer
Extract	As the parent deliverable permits	Must state that it is an extract	Senior reviewer
Superseded	As the parent deliverable permitted	May not be cited as current	Senior reviewer

Schedule D.2 - Cross-reference forms between deliverables

Reference to	Elements required	Rule	Corrected by
A finding in the same set	Deliverable reference and row reference	Cite, never restate	The citing deliverable
A finding in an earlier set	Set reference, deliverable, row, and revisit status	State whether it has been revisited	The citing deliverable
A register row	Register name, version and row reference	Row references are stable across restatements	The citing deliverable
A model output	Model name, version and output reference	Never a page number alone	The citing deliverable
An adviser's conclusion	Author, document, date, and whether tested	State that it was adopted	The citing deliverable
A policy requirement	Policy name, edition and effective date	Edition is mandatory	The citing deliverable
An extract of a deliverable	Parent set reference and that it is an extract	Marking travels with the extract	The extract
