IC MANDATE AND HARD GATES

Governing provision

The ownership gate is 12.00% immediately following initial funding.

Controls, Exceptions, and Version Administration

IC Mandate and Hard Gates identifies its authority, effective date, scope, defined terms, mandatory controls, evidence owners, approvers, escalation paths, exceptions, monitoring, and version history.

An exception requires written rationale, compensating controls, approval, expiry, and continuing monitoring; a prior exception does not create a standing waiver.

Superseded drafts remain available for history but do not control a current transaction merely because they contain later edits or more detailed examples.

Section 1. Authority, Adoption, and Scope of this Mandate

This mandate is adopted by the general partner of the Ardent Peak funds and delegates to the investment committee the authority to commit fund capital, subject to the limits set out below. Edition 7 was approved on 2026-01-13 and took effect on 2026-01-19; it is the only edition in force, and any earlier edition retained in the firm's records is an archive copy that may be used to establish what the standard was on a past date but never to decide a current matter.

The mandate binds every person who prepares, reviews, certifies, presents or decides an investment matter for a fund managed by the firm, including secondees and advisers acting under an engagement letter. A person who is asked to act outside the mandate must decline and report the request to the committee secretary; the committee treats a failure to report as a breach of the mandate in its own right, independent of the merits of the underlying request.

Capital may be committed only by a resolution of the committee or under a delegation recorded in section 8. No partner, officer or employee may commit capital by conduct, by correspondence, or by allowing a counterparty to believe a commitment exists, and any such purported commitment is reported to the general partner and to the fund's counsel before it is answered.

Every threshold, percentage, ceiling and designated measurement basis applied under this mandate is held in Schedule 1, which the committee amends by the same majority required to amend the mandate itself. The body of the mandate states the rule, the test, the population, the evidence, the certifier and the consequence; the schedule states the figure. A reader who needs the operative number must take it from the schedule and record the schedule edition alongside it.

Section 2. Constitution of the Committee, Quorum, and Voting

The committee consists of the voting members appointed by the general partner from time to time and such non-voting attendees as the chair invites. Appointment and removal are effected in writing and take effect when recorded by the committee secretary, and the secretary maintains the roll of voting members as the sole record of who may vote at a given meeting.

A quorum is a majority of the voting members then in office who are not recused on the matter before the committee. Where recusals reduce the attending members below a quorum the matter is adjourned rather than decided by those remaining, and the secretary records the adjournment and its cause so that the reason a decision was delayed is visible on the face of the record.

A member with a personal, financial or fiduciary interest in a matter must disclose it before discussion begins and must withdraw for the vote. The disclosure and the withdrawal are minuted individually; a general standing disclosure filed at the start of the year does not satisfy this requirement, and a member who remains for a vote after disclosing an interest invalidates the vote on that matter.

Decisions are taken at a convened meeting or by written consent signed by the number of voting members the matter requires. Written consent may not be used for a matter that this mandate reserves to a convened meeting, and no

matter may be decided on a poll conducted by correspondence in which the members cannot see one another's positions before voting.

Schedule 2.4 - Voting basis and tie-break by decision type

Decision type	Members counted	Required consent	Tie-break	Recorded control
New position, single vehicle	Voting members then in office	Majority of a quorum	Chair may not break a tie in favour	Recusal recorded in the minute
New position, multiple vehicles	Voting members then in office	Majority of a quorum plus compliance sign-off	Chair may not break a tie in favour	Allocation record read into the minute
Follow-on within an established reserve	Voting members present	Majority of a quorum	Chair may break a tie	Reserve analyst attends
Follow-on exceeding an established reserve	All voting members	Unanimous consent of voting members not recused	No tie possible	Reserve breach memorandum required
Exception to a hard gate	All voting members	Unanimous consent of voting members not recused	No tie possible	Chief compliance officer attends
Restructuring of an existing position	Voting members then in office	Majority of a quorum	Chair may break a tie	Sponsoring partner may not chair
Full or partial realization	Voting members present	Majority of a quorum	Chair may break a tie	Valuation review note tabled
Write-down or write-off	Voting members then in office	Majority of a quorum	Chair may break a tie	Independent of the sponsoring partner
Adoption or amendment of this mandate	All voting members	Unanimous consent, with notice to limited partners	No tie possible	Prior edition retained as an archive copy

Section 3. Pre-Investment Hard Gates

3.1 Construction of a hard gate. Each standard in this section is a hard gate, which means the opportunity must clear it before the committee may vote to fund, and clearing it is a question of evidence rather than of judgement. A gate is expressed as a requirement, a test that determines whether the requirement is met, the population over which that test is measured, the evidence that must be on file, the person who certifies the evidence, and the consequence of failure. Where any of those six elements cannot be supplied, the gate is failed and not merely untested.

A gate is cleared only for the transaction, the vehicle and the measurement point for which it was tested. Clearing a gate at one measurement point does not clear it at another, and a gate cleared for one vehicle is not cleared for a parallel vehicle whose participation differs. Where a gate passes at one designated point and fails at another, the failure governs unless Schedule 1 designates a single point for that gate, in which case the result at the designated point governs and the other result is recorded as a supporting observation.

A gate may not be cleared prospectively. Evidence dated after the measurement point may be used to prove a fact that existed at the point, but it may not be used to create the fact; the distinction is recorded on the certification so a later reader can see which of the two happened. The deal team must obtain the certification before the matter is circulated for decision, and absent the certification the matter may not be included on the agenda.

3.2 Minimum ownership on funding. The fund's holding in the issuer, computed on the basis prescribed in Schedule 1 to this mandate, must equal or exceed the minimum ownership percentage specified in that schedule before any funding obligation is accepted. Deal analytics recomputes the holding from the issuer's capitalization record of record and compares the result against the schedule figure at the measurement point that Schedule 1 designates for this gate. The computation is measured over the whole capital structure as it stands at the designated point, including every instrument that converts or is exercisable at or before that point and every reserve required to be counted by the schedule.

The evidence of record is the signed recomputation worksheet, the capitalization extract it was built from, and the identification of the source instrument for each line of that extract. Deal analytics certifies the arithmetic and the head of the investing sector certifies that the extract is complete. If the recomputed holding falls below the schedule figure the opportunity fails this gate and may not be funded, and the deal team must either restructure the participation so the gate is met or seek an exception under section 7.

3.3 Governance representation secured by instrument. A board representation right, or an observer right where the committee has accepted one in its place, must be granted to the fund by an executed governance instrument and not by side assurance, before funding. Counsel reads the executed governance instrument against the term sheet and confirms

that the right runs to the fund by name or to a class the fund demonstrably belongs to, and that no condition to its exercise remains unsatisfied at funding.

The reading covers the governance instrument, every voting or drag arrangement that binds the same seat, and any charter provision that limits how the seat may be filled. Counsel's memorandum identifies the granting clause by section, the class entitled to designate, and any condition or lapse mechanic attached to the right. Transaction counsel certifies enforceability and the sponsoring partner certifies that the right obtained matches what the committee approved. Where the right exists only in correspondence or in an unexecuted draft the gate fails, and the committee's prior approval lapses until the executed instrument is produced.

3.4 Information and inspection rights. Contractual rights to periodic financial statements, to the capitalization record, and to inspect books and records must be in force at funding on terms sufficient for the fund to meet its own reporting obligations to its limited partners. The finance team maps each reporting obligation the fund owes to the corresponding contractual right it will rely on, and flags any obligation with no supporting right.

The mapping covers every recurring report and every ad hoc request the fund is obliged to satisfy during the expected holding period, not only the current reporting year. The completed obligation map, initialled by the preparer and the reviewer, is filed with the funding memorandum. The fund controller certifies the map, and where a qualification threshold governs entitlement to a right, counsel certifies that the fund satisfies it on the basis stated in the executed instrument. An unsupported reporting obligation is a gate failure; the committee may fund only if the gap is closed in the definitive documents or an exception is granted with a compensating undertaking.

3.5 Completeness of the capitalization record. Before a funding decision the deal team must obtain a capitalization record that ties every outstanding class, option, warrant and convertible instrument to a signed source document; absent that record the opportunity may not be presented to the committee. Each line of the record is traced to its instrument, and the reviewer confirms that the set of instruments on file accounts for the whole of the issuer's issued and reserved capital with no residual and no unexplained line. Tracing is performed over the complete instrument population, including instruments held by departed employees, instruments issued to advisers, and any instrument denominated in a currency other than the fund's reporting currency.

The trace worksheet records, for each line, the instrument name, its execution date, and the reviewer's initials. Deal analytics certifies the trace and counsel certifies that no instrument known to counsel is missing from the population. An untied line, or an instrument on file that appears nowhere in the record, stops the presentation until the discrepancy is recorded and resolved against the source instrument.

3.6 Conversion mechanics modelled from the instruments. Every convertible instrument in the capital structure must be modelled from its own executed terms, and the model must show the conversion outcome the instrument produces rather than an assumed or averaged treatment. Testing covers all convertible instruments without sampling, because a single instrument with an unusual basis or an unusual discount can change the outcome for every other holder.

The reviewer selects each instrument in turn and re-derives its conversion result from the instrument text, then confirms that the model reproduces that result to the precision required by the modelling conventions memorandum. Each instrument's tab carries a citation to the governing clause, the inputs taken from it, and the reviewer's re-derivation. Where an instrument has been modelled on an assumption rather than on its terms, the model is returned unapproved and the opportunity does not proceed to a vote on that model. The modeller certifies the derivation and a second reviewer independent of the model certifies the clause citations.

3.7 Integrity of the distribution stack. The order in which proceeds would be distributed among classes on a liquidity event must be derived from the charter and the executed financing documents, and the derived order must be reproduced in the funding memorandum. Counsel and the modeller jointly walk the stack from the most senior class to the residual and confirm that each step cites a charter provision or an executed contractual undertaking. The walk covers every class and sub-series then outstanding, every instrument that would convert on the modelled event, and any class whose seniority depends on a consent that has not yet been given.

The stack walk is filed as a schedule to the funding memorandum with a clause citation against each step and a note of any step that rests on a pending consent. Transaction counsel certifies the legal order and the modeller certifies that the

model implements the order as certified. A step that cannot be tied to a charter provision or an executed undertaking is treated as unresolved, and the committee may not rely on any distribution outcome derived through it.

3.8 Follow-on reserve adequacy. A follow-on reserve computed under the fund's reserve policy must be established and recorded against the position at the time of the initial funding decision; a position may not be funded with the reserve left to be determined later. The reserve analyst prepares the reserve computation on the view of the capital structure that the reserve policy designates for reserve sizing, and the committee tests the result against the uncommitted capital then available to the fund.

The adequacy test is measured across the whole of the fund's reserved positions rather than the single opportunity, so that a reserve which is adequate in isolation but unfundable in aggregate is caught before funding. The reserve computation, the uncommitted capital statement it was compared against, and the analyst's sign-off are filed together in the position file. The reserve analyst certifies the computation and the chief financial officer of the manager certifies the uncommitted capital statement. If aggregate reserves exceed uncommitted capital the gate fails, and no further reserve may be established until the committee has either released reserve elsewhere or approved a breach under the reserve policy.

3.9 Absence of undisclosed side arrangements. The issuer and each selling holder must confirm in writing that no side letter, management arrangement, indemnity or transfer restriction exists outside the documents delivered to the fund, and the confirmation must be dated at or after the final delivery of documents. The reviewer compares the confirmation date against the document delivery log and against the execution dates of all instruments received, and re-requests the confirmation if any instrument post-dates it. The confirmation is sought from the issuer and from every holder party to the transaction, including holders participating only through a transfer or a consent.

The signed confirmations and the delivery log are indexed together so the sequence of dates can be read without reconstructing it. The sponsoring partner certifies that the confirmations have been obtained from the full party list. An arrangement discovered after funding that should have been captured by the confirmation is reported to the committee at its next meeting and recorded in the position file as an open matter until it is resolved.

3.10 Placement eligibility and purchaser qualification. Participation must be structured so the issuance qualifies for the private placement exemption the issuer is relying on, and the fund must establish and document its own qualification as a purchaser before subscription documents are signed (17 C.F.R. § 230.506(b)). Compliance reviews the issuer's stated basis for the exemption, confirms that the fund's qualification documentation is current, and checks that no general solicitation is recorded in the transaction file (17 C.F.R. § 230.501).

The review covers the subscribing entity, any parallel or alternative investment vehicle participating alongside it, and any co-investor the fund has introduced to the issuer. The compliance file holds the qualification record for each subscribing entity and a note of the exemption basis the issuer has stated in its own documents. The chief compliance officer certifies eligibility; counsel certifies that the subscription documents are consistent with the stated basis. Subscription documents may not be executed while any qualification record is out of date, and a lapse discovered after signature is escalated to the chief compliance officer the same business day.

3.11 Equity compensation and deferred compensation review. The issuer's outstanding equity awards and any deferred compensation arrangement affecting the capital structure must be reviewed for compliance risk that could transfer economic cost to the fund after funding (I.R.C. § 409A). The sample is drawn from awards granted since the issuer's last independent valuation, and is extended to the full population where the first sample produces an unsupported award.

The reviewer samples award agreements against the plan document and the most recent independent valuation report relied on for award pricing, and reports any award priced without support (17 C.F.R. § 230.701). The review memorandum lists each award examined, the valuation report relied on for it, and the reviewer's conclusion on support. An unsupported award population is quantified and either indemnified in the definitive documents or reported to the committee as a priced exposure before the vote. Tax counsel or the fund's designated adviser certifies the conclusion, and the sponsoring partner records whether any identified exposure was priced into the transaction.

3.12 Independent valuation support for the entry price. The price at which the fund enters must be supported by a valuation analysis prepared or reviewed independently of the deal team, using a standard of value stated in the analysis

itself (FASB ASC Topic 820). The reading covers the analysis as delivered together with every appendix relied on for an input, because an input that appears only in an appendix is still an input to the conclusion.

The valuation team reads the analysis for internal consistency between the standard of value, the methods weighted, and the conclusion, and reports any method whose weighting is asserted rather than reasoned. The valuation team's review note, the analysis, and the appendices relied on are filed as one record in the position file. Where the analysis was prepared by the deal team without independent review the gate fails, and the committee may not treat the entry price as supported. The head of valuation certifies independence from the deal team and the adequacy of the review.

3.13 Counterparty screening and source of funds. Screening of the issuer, its controlling holders, and each co-investor must be completed and current before funds are released. Screening covers each party receiving funds, each party controlling a recipient, and each intermediary through which funds pass.

Operations re-runs screening within the release window rather than relying on the screening performed at signing, and records the run date against the release instruction. The screening output, the run date, and the reviewer identity are attached to the release instruction. A release instruction without a current screening run is rejected by the treasury function, and no partner may override that rejection. The head of operations certifies the run and the chief compliance officer certifies the disposition of any match.

3.14 Conflicts and allocation among funds. Where more than one vehicle managed by the firm is eligible to participate, the allocation among them must follow the allocation policy in force and be recorded before the committee votes. The compliance officer compares the proposed allocation against the policy's ordering and against the participation history of each eligible vehicle, and reports any departure with its stated reason.

Every vehicle eligible under its own investment period and mandate is included in the comparison, including a vehicle that has elected not to participate. The allocation record shows each eligible vehicle, the amount allocated to it, and the reason for any departure from the policy ordering. The chief compliance officer certifies conformity with the allocation policy. An unrecorded allocation is a gate failure; the vote is deferred until the record is complete, and a departure without a stated reason is reported in the quarterly compliance report.

3.15 Documentation completeness and signature verification. At funding, every document the committee's approval was conditioned on must be present in the closing set, fully executed, and verified as executed by a person other than the person who assembled the set. Verification covers every condition in the resolution and every counterpart of every document, including counterparts delivered by parties who signed after the closing set was circulated.

The verifier works from the condition list in the approval resolution and marks each condition either satisfied by a named executed document or outstanding, with no third category. The completed condition list, initialled by the verifier and dated, is the record of funding readiness and is retained with the closing set. Funds may not be released while any condition remains marked outstanding, and a condition marked satisfied by an unsigned counterpart is treated as outstanding. The committee secretary certifies that the condition list corresponds to the resolution as passed.

Schedule 3.16 - Hard gate register with owners, evidence and consequence

Ref	Mandate ref	Requirement	Test owner	Certifier	Evidence of record	Measured at	Consequence of failure
HG-01	3.2	Minimum ownership on funding	Deal analytics	Sector head	Recomputation worksheet	Per Schedule 1	Restructure or s7 exception
HG-02	3.3	Board or observer right granted	Transaction counsel	Sponsoring partner	Granting-clause memorandum	At execution	Approval lapses until produced
HG-03	3.4	Information and inspection rights	Fund controller	Transaction counsel	Reporting obligation map	At execution	Close gap or compensating undertaking
HG-04	3.5	Capitalization record ties to instruments	Deal analytics	Transaction counsel	Line-by-line trace worksheet	Before presentation	Presentation stopped
HG-05	3.6	Conversion mechanics from instrument terms	Modeller	Independent reviewer	Per-instrument re-derivation	Before vote	Model returned unapproved
HG-06	3.7	Distribution	Transaction	Modeller	Stack walk	Before vote	Outcome may

Ref	Mandate ref	Requirement	Test owner	Certifier	Evidence of record	Measured at	Consequence of failure
		stack derived and cited	counsel		schedule		not be relied on
HG-07	3.8	Follow-on reserve established	Reserve analyst	Chief financial officer	Reserve computation and capital statement	At funding decision	No further reserve until released
HG-08	3.9	No undisclosed side arrangements	Sponsoring partner	Committee secretary	Dated confirmations and delivery log	After final delivery	Reported as open matter
HG-09	3.10	Placement eligibility and qualification	Chief compliance officer	Transaction counsel	Qualification and exemption file	Before subscription	Signature withheld
HG-10	3.11	Equity and deferred compensation review	Tax adviser	Sponsoring partner	Award sample memorandum	Before vote	Indemnify or price the exposure
HG-11	3.12	Independent valuation support	Head of valuation	Committee chair	Review note and appendices	Before vote	Entry price unsupported
HG-12	3.13	Counterparty screening current	Head of operations	Chief compliance officer	Screening run attached to release	In release window	Treasury rejects release
HG-13	3.14	Allocation among eligible vehicles	Chief compliance officer	Committee secretary	Allocation record with reasons	Before vote	Vote deferred
HG-14	3.15	Closing conditions verified as executed	Committee secretary	Independent verifier	Initialled condition list	At release	Funds withheld

Governing provision and cross-references

The ownership gate is 12.00% immediately following initial funding.

This provision is read with the defined terms, the schedules to this instrument, and any consent or waiver recorded against it; a summary prepared from it does not vary it.

Section 4. Measurement Points, Populations, and Recomputation

A measurement point is a defined state of the transaction at which a test is performed, not a calendar date chosen for convenience. This mandate recognises the points listed in the schedule to this section; a test performed at any other point is a supporting analysis and is labelled as such. Where a gate does not name its point, Schedule 1 designates it, and the designation travels with the threshold rather than with the narrative.

The population of a test is the set of items over which it is measured, and it must be stated before the test is run. Two results computed at the same point over different populations are different results, and presenting one as though it were the other is a reportable error whether or not the difference is material to the decision. Every certification therefore records the population as well as the outcome.

A test must be recomputed, and the recomputation certified afresh, whenever an input to it changes after certification. A late-delivered counterpart, a withdrawn consent, a corrected capitalization line and a change in a designated basis are each an input change for this purpose. The committee may not rely on a certification whose inputs have changed, and the secretary marks such a certification as stale on the face of the register.

Where a recomputation produces a different outcome from the original, both outcomes are retained and the record shows which input changed. The original is never deleted or overwritten, because the sequence of results is itself evidence of how the matter developed and is frequently the only way to explain a decision to a reviewer who arrives after the fact.

Schedule 4.5 - Recognised measurement points and recomputation triggers

Point	Name	State measured	Source of record	Recomputation rule
MP-A	Committee decision point	The moment the resolution is put to the vote	Approval resolution as tabled	Not recomputed after the vote unless a condition changes

Point	Name	State measured	Source of record	Recomputation rule
MP-B	Initial funding point	Immediately after the first release of funds under the transaction	Closing set and funds flow statement	Recomputed if any counterpart is delivered after release
MP-C	Subsequent funding point	Immediately after each later release under the same transaction	Release instruction and satisfaction evidence	Recomputed at each release without exception
MP-D	Fully funded point	The state in which every contemplated release has occurred	Definitive documents read as a whole	Illustrative unless a schedule designates it
MP-E	Reserve sizing point	The point designated for reserve sizing by the reserve policy	Reserve computation of record	Recomputed on every re-forecast
MP-F	Periodic reporting point	The reporting date named in the measurement calendar	Measurement calendar and reporting pack	Recomputed each cycle
MP-G	Condition satisfaction point	The date a specific closing condition is certified satisfied	Initialled condition list	Recomputed if the certification is withdrawn
MP-H	Post-event point	Immediately after a conversion, exercise, forfeiture or transfer	Instrument and transfer record	Recomputed within the same reporting cycle

Section 5. Certification, Evidence of Record, and Permitted Reliance

A certification is a signed statement by a named person that a specified test was performed on specified evidence and produced a specified outcome. It is not an opinion on the merits of the opportunity, and a certifier may not add a qualification that leaves the outcome ambiguous; where the certifier cannot certify without qualification, the matter is escalated under section 7 instead of being certified conditionally.

Evidence of record is the specific document the certifier examined, identified so precisely that a second person can retrieve the same document and reach the same conclusion. A reference to a folder, a data room index entry or a document class is not evidence of record. Where the certifier relied on an extract, the extract and the document it came from are both filed.

A certifier may rely on the work of another person only where this mandate names that reliance, and the reliance is disclosed on the certification with the name of the person relied on. Reliance on an adviser is permitted where the adviser's engagement letter covers the question certified; reliance on the deal team for a test the deal team's own case depends on is not permitted in any circumstance.

Certifications are filed with the funding memorandum and indexed to the gate register, and the secretary confirms at each meeting that every gate on the register carries either a current certification or a recorded failure. A gate with neither is treated as failed for the purposes of the meeting, and the secretary records that the treatment arose from an absent certification rather than from an adverse test result.

Section 6. Gate Failure, Remediation, and Re-Presentation

A failed gate stops the matter. The sponsoring partner may withdraw the matter, remediate the failure and re-present it, or seek an exception under section 7; there is no fourth route, and in particular the committee may not fund a matter on the footing that the failure will be cured after release. A matter withdrawn after a failure is recorded as withdrawn after failure rather than simply withdrawn.

Remediation must address the fact the gate tested, not the evidence of it. Producing a differently worded confirmation, re-running a computation on a narrower population, or obtaining a certification from a different certifier does not remediate a failure and is reported to the chief compliance officer if attempted. The committee treats an attempt of that kind as a reportable control breach regardless of the outcome of the underlying test.

A re-presented matter is presented as a re-presentation, with the original failure, the remediation performed, and the date of each. The committee decides the matter afresh; the earlier approval of any part of it does not survive the failure, and a condition imposed on the earlier approval is reimposed only if the committee reimposes it explicitly.

Where a gate passed at an earlier measurement point and fails at a later one, the position is reported to the committee at its next scheduled meeting whether or not any further funding is contemplated, and the reserve analyst is

asked whether the reserve established for the position remains appropriate. The report identifies the input that changed between the two points.

The committee secretary maintains a record of every gate failure, its disposition and its final outcome, and reports the record to the general partner each quarter. The record is kept for the life of the fund because it is the primary evidence that the gates were operated rather than merely published, and it is produced to the fund's auditors on request.

Section 7. Exceptions, Conditions, and Escalation

An exception is a decision by the committee that a matter may proceed notwithstanding a failed gate. It requires the consent this mandate specifies for the decision type, a written rationale, an identified compensating control, a stated expiry, and a monitoring assignment. An exception that lacks any of those five elements is void, and the secretary refuses to record it rather than recording it as incomplete.

An exception applies only to the matter, the vehicle and the measurement point it names. It creates no precedent and no standing waiver, and a second matter presenting the same failure is escalated on its own facts. Where the committee finds itself granting the same exception repeatedly, the chair must put to the committee whether the underlying standard should be amended, and the minute records that the question was put.

An exception expires on its stated expiry without further action. Renewal requires a fresh decision on the facts as they then stand, supported by the monitoring reports produced since the grant, and the renewal record states what changed. An expired exception does not revive because the underlying matter is still open, and a position operating under an expired exception is reported as an unremediated failure.

Escalation follows the schedule to this section. The person who identifies the trigger escalates immediately and in writing, and may not defer escalation to gather further facts; the escalation may state that the facts are incomplete. Suppressing or delaying an escalation is treated as more serious than the matter escalated, and the chief compliance officer reports any such instance to the general partner directly.

Schedule 7.5 - Escalation triggers, routes and decision rights

Trigger	Escalate first to	Then to	Decision right	Standing period
Gate test cannot be performed for want of evidence	Sector head	Committee chair	Committee	Until evidence is produced
Gate test performed and failed	Sponsoring partner	Committee	Committee, unanimous	One decision cycle
Certifier declines to certify	Committee secretary	Committee chair	Committee	Until withdrawn in writing
Conflict identified after approval	Chief compliance officer	Committee chair	Committee	Immediate, before release
Screening match on a fund recipient	Head of operations	Chief compliance officer	Chief compliance officer	Release suspended
Aggregate reserves exceed uncommitted capital	Chief financial officer	Committee	Committee	Until reserves are rebalanced
Model finding discovered after a vote	Head of valuation	Committee chair	Committee	Vote revisited at next meeting
Exception approaching its stated expiry	Committee secretary	Sponsoring partner	Committee	Lapses on expiry without renewal

Section 8. Delegated Authority and Reserved Decisions

The committee delegates the acts listed in the schedule to this section on the terms stated there, and reserves everything not listed. A delegate acts in the name of the committee and is accountable to it; the delegate may not sub-delegate, and an act purportedly performed under a sub-delegation is reported to the secretary and treated as unauthorised until ratified.

No delegation extends to waiving a hard gate, granting an exception, releasing reserve to uncommitted capital, or amending Schedule 1. Those decisions are reserved to the committee however urgent the matter is said to be, and the chair has no power to act between meetings on a reserved matter beyond convening the committee at short notice.

Each delegate reports the exercise of the delegation on the cadence stated in the schedule, and the secretary tables the reports at the next meeting. Failure to report is itself reported; the committee has withdrawn delegations for non-reporting in the past and the schedule records the current position rather than the historical one.

Schedule 8.4 - Delegated authority, reporting cadence and limits

Act delegated	Primary delegate	Second signature	Reporting	Limit on the delegation
Execution of non-binding indications	Sponsoring partner	Sector head	Notified at next meeting	May not waive a hard gate
Engagement of diligence advisers	Sector head	Chief operating officer	Reported quarterly	Within the approved diligence budget
Negotiation of definitive documents	Transaction counsel	Sponsoring partner	Reported at the funding decision	No change to an approved condition
Certification of a gate test	Named certifier in section 5	Committee secretary	Filed with the memorandum	Not delegable to the deal team
Release of funds against a complete condition list	Head of operations	Chief financial officer	Logged at release	Blocked by any outstanding condition
Establishment of a reserve at the policy amount	Reserve analyst	Chief financial officer	Reported in the reserve pack	Not a decision to deploy
Release of reserve to uncommitted capital	Committee	Not delegable	Minuted	Requires re-forecast on file
Grant of an exception to a hard gate	Committee	Not delegable	Minuted with expiry	No standing waiver may be created
Approval of a model as fit for decision use	Head of valuation	Committee chair	Recorded on the model register	Withdrawn on any unremediated finding
Correction of a clerical error in a filed record	Committee secretary	Chair	Annotated, never overwritten	Original entry preserved

Section 9. Monitoring, Testing, and Reporting to the Committee

Monitoring under this mandate tests whether the gates were operated, not whether the investments performed. The activities in the schedule to this section are performed on the stated cadence by the stated function and reviewed by the stated reviewer, and each produces a named deliverable that is retained for the stated period. A cadence missed is reported in the same cycle it was missed.

Internal review re-performs a sample of certifications each quarter without notice to the certifier, and reports every instance in which re-performance produced a different outcome. The sample is drawn to cover each certifier over a rolling year rather than to cover the largest positions, because the control being tested is the certification process and not the size of the commitment.

The committee receives a monitoring pack at each meeting containing the gate register, the exception log with ageing, the open escalations, and the results of any re-performance completed since the last meeting. The chair may not accept the pack as read; each item is tabled, and an item the committee does not reach is carried forward and shown as carried forward.

Schedule 9.4 - Monitoring calendar, ownership and retention

Monitoring activity	Cadence	Performed by	Reviewed by	Deliverable	Retention
Re-performance of a sample of gate certifications	Quarterly	Internal review	Committee chair	Re-performance memorandum	Ten years
Reconciliation of the gate register to the minutes	Each meeting	Committee secretary	Chair	Annotated register extract	Life of the fund
Review of open exceptions and their expiries	Monthly	Chief compliance officer	Committee	Exception log with ageing	Ten years
Test of the capitalization trace on live positions	Semi-annual	Deal analytics	Head of valuation	Trace test results	Ten years
Confirmation that screening runs are current	Monthly	Head of operations	Chief compliance officer	Screening currency report	Seven years
Comparison of allocations against the allocation policy	Quarterly	Chief compliance officer	Committee	Allocation conformity report	Ten years
Review of models on the decision-use register	Annual	Head of valuation	Committee chair	Model register attestation	Life of the fund
Confirmation that this mandate remains the current edition	Annual	Committee secretary	Committee	Edition attestation	Life of the fund
Report of gate	Quarterly	Committee secretary	Limited partner	Gate disposition	Life of the fund

Monitoring activity	Cadence	Performed by	Reviewed by	Deliverable	Retention
failures and their disposition			advisory committee	summary	

Section 10. Precedence, Conflicts, and Relationship to Other Policies

Where this mandate and another policy of the firm both address a hard gate, this mandate governs and the other policy is read as supplementing it. Where the other policy would produce a different measurement basis, the basis designated for the gate governs the gate, and the other basis may be presented alongside it only as a subordinate view that is labelled as subordinate.

A conflict between this mandate and a fund's limited partnership agreement is resolved in favour of the agreement, and the committee secretary refers any such conflict to counsel before the matter is decided. A conflict between this mandate and a term the firm has agreed with a counterparty is resolved by escalation, not by the deal team's reading of which should yield.

Reviewers must not resolve an apparent conflict silently. The conflict is recorded, escalated and decided by the person with the decision right, and the record shows what the two documents said and which was applied. A reviewer who resolves a conflict without recording it has breached this mandate even where the resolution reached was the one the committee would have reached.

Section 11. Defined Terms Used in this Mandate

Hard gate means a standard in section 3 that must be cleared before a funding decision. Gate test means the procedure that determines whether the standard is met. Population means the set of items over which a gate test is measured. Certifier means the person named in section 5 or in the gate register who signs the certification, and certification means that signed statement.

Evidence of record means the identified document the certifier examined. Measurement point means a state of the transaction defined in section 4. Designated basis means the computation basis assigned to a gate by Schedule 1. Exception means a decision under section 7, and compensating control means the control identified in an exception as mitigating the failure it permits.

References to a section are to a section of this mandate; references to a schedule are to a schedule to this mandate as in force on the date the reference is applied. The singular includes the plural, a reference to a function includes the person for the time being performing it, and a term defined here bears the same meaning in every schedule unless the schedule states otherwise in terms.

Section 12. Administration, Records, and Version History

The committee secretary administers this mandate, maintains the roll of voting members, the gate register, the exception log and the version history, and is the custodian of every certification filed under it. Records are retained for the periods stated in Schedule 9.4 or for the life of the fund where that is longer, and are produced to the auditors and to the limited partner advisory committee on request.

An amendment to this mandate takes effect on the effective date the committee states, and the superseded edition is retained unchanged as an archive copy marked with the date it ceased to have effect. A matter decided before an amendment is judged by the edition in force when it was decided; a matter still open on the effective date is judged by the new edition from that date forward, and the record shows which edition each certification was made under.

A clerical error in a filed record is corrected by annotation, never by replacement, and the annotation is dated and initialled. Where a correction changes the outcome of a gate test the correction is treated as an input change under section 4 and the test is recomputed and recertified rather than annotated.

Schedule 12.4 - Version history of the investment committee mandate

Edition	Approved	Effective from	Principal change	Status
Ed. 1	2016-03-08	2016-04-01	Original mandate; gates stated as guidance only	Superseded by Ed. 2
Ed. 2	2018-05-22	2018-07-02	Gates made mandatory; certification requirement	Superseded by Ed. 3

Edition	Approved	Effective from	Principal change	Status
			introduced	
Ed. 3	2019-11-12	2020-01-02	Exception procedure added with expiry and monitoring	Superseded by Ed. 4
Ed. 4	2021-09-14	2021-10-04	Measurement points defined and separated from thresholds	Superseded by Ed. 5
Ed. 5	2023-02-07	2023-03-01	Thresholds moved out of the body into Schedule 1	Superseded by Ed. 6
Ed. 6	2024-10-15	2024-11-04	Screening and allocation gates added	Superseded by Ed. 7
Ed. 7	2026-01-13	2026-01-19	Current edition; population and recomputation rules restated	In force

Schedule 12.5 - Required fields of the exception log

Field	Required content	Source	Completed by
Log reference	Sequential reference issued by the secretary	Secretary's register	Committee secretary
Matter and vehicle	The transaction and the vehicle the exception applies to	Approval resolution	Committee secretary
Gate failed	The mandate reference of the failed gate	Gate register	Sponsoring partner
Failure described	What the test found, in the certifier's words	Certification	Certifier
Rationale	Why the committee permitted the matter to proceed	Minute of the meeting	Committee secretary
Compensating control	The control relied on and who operates it	Exception decision	Sponsoring partner
Consent recorded	The members consenting and any recusal	Minute of the meeting	Committee secretary
Expiry	The date the exception ceases to have effect	Exception decision	Committee secretary
Monitoring assignment	The function reporting on the exception and its cadence	Exception decision	Chief compliance officer
Disposition	Remediated, renewed, lapsed or escalated, with the date	Monitoring report	Chief compliance officer
