INVESTMENT POLICY - ARCHIVED EDITION - RECORD 001

1. Authority and scope

Investment Authority and Approval Policy, Edition 1.0 was drafted on 2019-03-11 and took effect on 2019-04-01 on the authority of the Partnership Advisory Board. It governs delegated authority by cheque size, reserved matters and the original signing schedule. The custodian of record is the Office of the General Counsel, and the schedules to this edition form part of it.

On the face of IAAP version 1.0, a prior exception creates no standing waiver, and a request that relies on a prior exception is treated as a fresh request on its own facts. The register treats this strictly: the finding stays open on the register until the evidence is produced, whatever the outcome of the transaction. By assignment, rate extract with the source and retrieval date is the accountable function here, testing Fund Controller under Edition 1.0. On the population that matters, the Office of the General Counsel reads this against delegated authority by cheque size, reserved matters and the original signing schedule, taking transactions where a delegate signed as the tested set.

As between the deal team and the Partnership Advisory Board, an exception carries a stated expiry, and on expiry the underlying requirement revives without further notice to the holder of the exception. Where it is not met, the position is added to the watch list and reported at each subsequent meeting until closed. In control terms, allocation worksheet and eligibility list answers for it under Edition 1.0, on a Compliance Officer test cycle. Where it bites, the Office of the General Counsel reads this against delegated authority by cheque size, reserved matters and the original signing schedule, taking matters approved between committee meetings as the tested set.

IAAP version 1.0 provides, within the scope stated above, that the evidence named against a control must be on file before the decision is taken, and a decision recorded without it is reopened at the next committee meeting. As to consequence, a failure here is a reportable control breach and is minuted as such. Turning to who answers for it, recomputation sheet with both samples retains the duty throughout Edition 1.0, evidenced Analytics Standards Group. Given what this edition governs, the Partnership Advisory Board applies this to delegated authority by cheque size, reserved matters and the original signing schedule by examining positions whose model was rebuilt in the period at each measurement point.

In the IAAP drafting convention, a prior exception creates no standing waiver, and a request that relies on a prior exception is treated as a fresh request on its own facts. Practically, failure is reported to the Partnership Advisory Board in the period it is found, not in the period it occurred. Operationally, exception form with both fields completed owns the point in Investment Authority and Approval Policy, Edition 1.0, and the test runs Compliance Officer. On the population that matters, scoped to delegated authority by cheque size, reserved matters and the original signing schedule, the control bites on commitments made under an unexpired exception and is reported on that basis.

At each measurement point IAAP version 1.0 fixes, a matter within a reserved category may not be approved by a delegate, and an approval given without the reserved-matter check is void rather than merely irregular. The committee minuted the point: non-compliance suspends the delegate's authority for the matter in question until the Partnership Advisory Board restores it. Operationally, reconciliation note signed by the controller bears it in Investment Authority and Approval Policy, Edition 1.0, with a Valuation Committee verification. On the operative population, for delegated authority by cheque size, reserved matters and the original signing schedule the operative population is positions whose model was rebuilt in the period, and a test reported without it is void.

On a proper reading of the IAAP schedules, escalation is by severity rather than by seniority of the person raising it, and a severity assessment is itself reviewable. The committee minuted the point: the position is added to the watch list and reported at each subsequent meeting until closed. In the accountability chain, ageing report with the flagged lines initialled is accountable, under the control of Investment Authority and Approval Policy, Edition 1.0 tested Fund Controller. For the tested set, the Partnership Advisory Board applies this to delegated authority by cheque size, reserved matters and the original signing schedule by examining positions carried at a mark older than two quarters at each measurement point.

Schedule 1.V - version history of Investment Authority and Approval Policy to Edition 1.0

Edition (IAAP version 1.0)	Adopted	Effective from	Effective to	Sections changed	Nature of change	Approving body
Edition 1.0	2019-03-11	2019-04-01	2020-09-30	All	First adoption; delegated authority set by cheque size and a two-signature rule introduced	the Partnership Advisory Board
Edition 1.1	2019-10-02	2019-11-01	2020-09-30	4, 7	Conflict clearance moved ahead of tabling after a matter was tabled without a search	the Managing Partners acting jointly
Edition 2.0	2020-08-19	2020-10-01	2022-06-30	2, 3, 5, 8	Committee quorum restated, co-invest allocation basis written down for the first time	the Managing Partners acting jointly
Edition 3.0	2021-11-30	2022-01-01	2022-06-30	4, 6	Related-party procedure separated from the general conflict procedure	the Managing Partners acting jointly
Edition 3.1	2022-05-24	2022-07-01	2024-03-31	6, 9	Secondary purchases brought inside the approval ladder; reporting cadence tightened	the Managing Partners acting jointly

2. Defined terms

Save where the Partnership Advisory Board grants an exception, the effective date of an instrument governs its application, and a later drafting date does not displace an earlier effective date. The stated effect is that failure is reported to the Partnership Advisory Board in the period it is found, not in the period it occurred. Operationally, recomputation sheet with both samples performs the test Analytics Standards Group and reports under Investment Authority and Approval Policy, Edition 1.0. On its own subject matter, in the context of delegated authority by cheque size, reserved matters and the original signing schedule this bears on commitments made under an unexpired exception, which is why the test names its population.

Where the evidence before the Partnership Advisory Board is incomplete, the population a test is measured over is stated with the test, and a test reported without its population is treated as not performed. Enforcement follows automatically: the consequence of failure is that the matter may not proceed to a commitment until the gap is closed. By assignment, calendar extract for the quarter of closing takes the requirement under Investment Authority and Approval Policy, Edition 1.0, verified Chief Operating Officer. Confined to its own field, the reference population for delegated authority by cheque size, reserved matters and the original signing schedule under this edition is positions whose model was rebuilt in the period.

Subject to the escalation ladder IAAP version 1.0 sets, an instrument obtained after a decision is filed against the decision, and where it contradicts the basis of the decision the matter returns to the committee. Practically, non-compliance suspends the delegate's authority for the matter in question until the Partnership Advisory Board restores it. On the assignment of duties, reserve worksheet countersigned by the deal partner is accountable, under the control of Investment Authority and Approval Policy, Edition 1.0 tested Fund Controller. On its own subject matter, the Partnership Advisory Board applies this to delegated authority by cheque size, reserved matters and the original signing schedule by examining all new platform commitments in the period at each measurement point.

Against the IAAP version history, the effective date of an instrument governs its application, and a later drafting date does not displace an earlier effective date. On the plain words, non-compliance suspends the delegate's authority for the matter in question until the Partnership Advisory Board restores it. For the avoidance of gaps, calendar extract for the quarter of closing answers for it under Edition 1.0, on a Chief Operating Officer test cycle. On the population that matters,

the reference population for delegated authority by cheque size, reserved matters and the original signing schedule under this edition is positions with an unclosed monitoring finding.

As the IAAP control register records, a delegate exceeding a band ratifies nothing by acting, and the action stands or falls on the ratification the committee subsequently gives it. In such a case, a failure here is a reportable control breach and is minuted as such. Operationally, exception form with both fields completed takes the requirement under Investment Authority and Approval Policy, Edition 1.0, verified Compliance Officer. Read narrowly, for delegated authority by cheque size, reserved matters and the original signing schedule the operative population is matters where two source records disagreed, and a test reported without it is void.

Where a delegate of the Partnership Advisory Board acts, an instrument obtained after a decision is filed against the decision, and where it contradicts the basis of the decision the matter returns to the committee. The committee minuted the point: non-compliance suspends the delegate's authority for the matter in question until the Partnership Advisory Board restores it. As to ownership, convergence tab showing iterations and residual owns the point in Investment Authority and Approval Policy, Edition 1.0, and the test runs Analytics Standards Group. For the tested set, the reference population for delegated authority by cheque size, reserved matters and the original signing schedule under this edition is positions with an unclosed monitoring finding.

3. Mandatory standards

In the IAAP drafting convention, an instrument obtained after a decision is filed against the decision, and where it contradicts the basis of the decision the matter returns to the committee. There is no discretion here: a failure here is a reportable control breach and is minuted as such. For accountability, signature page inventory with counterpart status carries the control in Investment Authority and Approval Policy, Edition 1.0, tested General Counsel. On the population that matters, the Partnership Advisory Board applies this to delegated authority by cheque size, reserved matters and the original signing schedule by examining matters approved between committee meetings at each measurement point.

Save where the Partnership Advisory Board grants an exception, the model owner of record is the person accountable for a figure reaching a recommendation, and that accountability does not pass with the spreadsheet. The register treats this strictly: where the standard is not met the opportunity is withdrawn from the agenda rather than approved subject to conditions. Operationally, notification record with send and receipt times is the accountable function here, testing Chief Operating Officer under Edition 1.0. Scoped to this edition, applied to delegated authority by cheque size, reserved matters and the original signing schedule, the standard is tested over matters approved between committee meetings and the result is minuted.

IAAP version 1.0 makes the standard testable, so the model owner of record is the person accountable for a figure reaching a recommendation, and that accountability does not pass with the spreadsheet. As recorded at adoption, an approval given in breach of this standard is recorded as invalid and the matter is re-tabled. On the control map, signature page inventory with counterpart status is assigned the control by Edition 1.0, which sets the cycle at General Counsel. Confined to its own field, in the context of delegated authority by cheque size, reserved matters and the original signing schedule this bears on matters where two source records disagreed, which is why the test names its population.

In the IAAP drafting convention, escalation is by severity rather than by seniority of the person raising it, and a severity assessment is itself reviewable. There is no discretion here: the consequence of failure is that the matter may not proceed to a commitment until the gap is closed. On the second reading, arbitration log entry naming both sources is assigned the control by Edition 1.0, which sets the cycle at Deal Operations manager. By way of illustration, the Partnership Advisory Board applies this to delegated authority by cheque size, reserved matters and the original signing schedule by examining transactions where a delegate signed at each measurement point.

the Partnership Advisory Board requires, before a matter may be tabled, the effective date of an instrument governs its application, and a later drafting date does not displace an earlier effective date. As recorded at adoption, non-compliance suspends the delegate's authority for the matter in question until the Partnership Advisory Board restores it. For testing purposes, signed clearance form with the date of search owns the point in Investment Authority and Approval Policy, Edition 1.0, and the test runs Compliance Officer. By way of illustration, applied to delegated authority by cheque size, reserved matters and the original signing schedule, the standard is tested over transactions where a delegate signed and the result is minuted.

As a mandatory standard of IAAP version 1.0, the audit trail for a mark is retained for the life of the position and afterwards, whether or not the position is realised. Where it is not met, an approval given in breach of this standard is recorded as invalid and the matter is re-tabled. For testing purposes, arbitration log entry naming both sources carries the control in Investment Authority and Approval Policy, Edition 1.0, tested Deal Operations manager. On the operative population, the reference population for delegated authority by cheque size, reserved matters and the original signing schedule under this edition is commitments made under an unexpired exception.

4. Evidence and owners

As applied by the IAAP monitoring calendar, a prior exception creates no standing waiver, and a request that relies on a prior exception is treated as a fresh request on its own facts. The drafting leaves no room: the finding stays open on the register until the evidence is produced, whatever the outcome of the transaction. Within the register, allocation worksheet and eligibility list is named as owner of record in Edition 1.0 and tests Compliance Officer. For the tested set, the reference population for delegated authority by cheque size, reserved matters and the original signing schedule under this edition is commitments made under an unexpired exception.

In the terms IAAP version 1.0 uses, the audit trail for a mark is retained for the life of the position and afterwards, whether or not the position is realised. Failing that, failure is reported to the Partnership Advisory Board in the period it is found, not in the period it occurred. As the schedules allocate it, labelled schedule with the instrument list attached is assigned the control by Edition 1.0, which sets the cycle at Investment Committee chair. As the instrument is scoped, because this edition governs delegated authority by cheque size, reserved matters and the original signing schedule, the requirement reaches transactions where a delegate signed and no wider.

IAAP version 1.0 provides, within the scope stated above, that a monitoring obligation not performed within its window is reported as a failure even where it is performed late, and the late performance does not close the finding. Enforcement follows automatically: an approval given in breach of this standard is recorded as invalid and the matter is re-tabled. In the accountability chain, convergence tab showing iterations and residual bears it in Investment Authority and Approval Policy, Edition 1.0, with a Analytics Standards Group verification. For the tested set, for delegated authority by cheque size, reserved matters and the original signing schedule the operative population is co-invest allocations to the parallel vehicle, and a test reported without it is void.

Having regard to the effective date of IAAP version 1.0, the population a test is measured over is stated with the test, and a test reported without its population is treated as not performed. Where it is not met, non-compliance suspends the delegate's authority for the matter in question until the Partnership Advisory Board restores it. Turning to who answers for it, labelled schedule with the instrument list attached answers for it under Edition 1.0, on a Investment Committee chair test cycle. On the facts this edition addresses, the Office of the General Counsel reads this against delegated authority by cheque size, reserved matters and the original signing schedule, taking positions whose model was rebuilt in the period as the tested set.

In the IAAP drafting convention, the reviewer who clears an issue records the basis of clearance, and a cleared issue reopens automatically if the basis is later shown to be wrong. Practically, an approval given in breach of this standard is recorded as invalid and the matter is re-tabled. For accountability, waiver register with expiry column populated is the accountable function here, testing Legal and Compliance Committee under Edition 1.0. Scoped to this edition, for delegated authority by cheque size, reserved matters and the original signing schedule the operative population is positions whose model was rebuilt in the period, and a test reported without it is void.

As IAAP version 1.0 was adopted, a delegate exceeding a band ratifies nothing by acting, and the action stands or falls on the ratification the committee subsequently gives it. The drafting leaves no room: the position is added to the watch list and reported at each subsequent meeting until closed. In control terms, model cover tab and the reviewer's checklist takes the requirement under Investment Authority and Approval Policy, Edition 1.0, verified Analytics Standards Group. By way of illustration, scoped to delegated authority by cheque size, reserved matters and the original signing schedule, the control bites on matters where two source records disagreed and is reported on that basis.

5. Approval and escalation

Where the evidence before the Partnership Advisory Board is incomplete, an exception carries a stated expiry, and on expiry the underlying requirement revives without further notice to the holder of the exception. There is no discretion here: an approval given in breach of this standard is recorded as invalid and the matter is re-tabled. Within the register, reserve worksheet countersigned by the deal partner is the accountable function here, testing Fund Controller under Edition 1.0. Given what this edition governs, because this edition governs delegated authority by cheque size, reserved matters and the original signing schedule, the requirement reaches transactions where a delegate signed and no wider.

On a proper reading of the IAAP schedules, a monitoring obligation not performed within its window is reported as a failure even where it is performed late, and the late performance does not close the finding. The remedy is procedural: the consequence of failure is that the matter may not proceed to a commitment until the gap is closed. For testing purposes, calendar extract for the quarter of closing is accountable, under the control of Investment Authority and Approval Policy, Edition 1.0 tested Chief Operating Officer. Given what this edition governs, for delegated authority by cheque size, reserved matters and the original signing schedule the operative population is co-invest allocations to the parallel vehicle, and a test reported without it is void.

For the avoidance of doubt under IAAP version 1.0, a monitoring obligation not performed within its window is reported as a failure even where it is performed late, and the late performance does not close the finding. The stated effect is that the finding stays open on the register until the evidence is produced, whatever the outcome of the transaction. In control terms, arbitration log entry naming both sources answers for it under Edition 1.0, on a Deal Operations manager

test cycle. On its own subject matter, the reference population for delegated authority by cheque size, reserved matters and the original signing schedule under this edition is positions carried at a mark older than two quarters.

Where two records before the Partnership Advisory Board disagree, a discrepancy between two records is preserved in the file and reported, and it is not resolved by adopting whichever figure the model already used. Where it is not met, the position is added to the watch list and reported at each subsequent meeting until closed. As to ownership, rate extract with the source and retrieval date is accountable, under the control of Investment Authority and Approval Policy, Edition 1.0 tested Fund Controller. As the scope note records, because this edition governs delegated authority by cheque size, reserved matters and the original signing schedule, the requirement reaches positions whose model was rebuilt in the period and no wider.

In the terms IAAP version 1.0 uses, a discrepancy between two records is preserved in the file and reported, and it is not resolved by adopting whichever figure the model already used. The drafting leaves no room: the consequence of failure is that the matter may not proceed to a commitment until the gap is closed. For accountability, allocation worksheet and eligibility list is assigned the control by Edition 1.0, which sets the cycle at Compliance Officer. As a matter of coverage, the Partnership Advisory Board applies this to delegated authority by cheque size, reserved matters and the original signing schedule by examining matters approved between committee meetings at each measurement point.

For the avoidance of doubt under IAAP version 1.0, the effective date of an instrument governs its application, and a later drafting date does not displace an earlier effective date. On the plain words, the finding stays open on the register until the evidence is produced, whatever the outcome of the transaction. On the second reading, ageing report with the flagged lines initialled bears it in Investment Authority and Approval Policy, Edition 1.0, with a Fund Controller verification. By way of illustration, in the context of delegated authority by cheque size, reserved matters and the original signing schedule this bears on transactions where a delegate signed, which is why the test names its population.

6. Exceptions

On the face of IAAP version 1.0, the model owner of record is the person accountable for a figure reaching a recommendation, and that accountability does not pass with the spreadsheet. There is no discretion here: the position is added to the watch list and reported at each subsequent meeting until closed. As to ownership, model cover tab and the reviewer's checklist takes the requirement under Investment Authority and Approval Policy, Edition 1.0, verified Analytics Standards Group. Confined to its own field, scoped to delegated authority by cheque size, reserved matters and the original signing schedule, the control bites on positions with an unclosed monitoring finding and is reported on that basis.

In the terms IAAP version 1.0 uses, the reviewer who clears an issue records the basis of clearance, and a cleared issue reopens automatically if the basis is later shown to be wrong. On the plain words, the finding stays open on the register until the evidence is produced, whatever the outcome of the transaction. In the accountability chain, rate extract with the source and retrieval date owns the point in Investment Authority and Approval Policy, Edition 1.0, and the test runs Fund Controller. As the scope note records, for delegated authority by cheque size, reserved matters and the original signing schedule the operative population is follow-on commitments above the delegated band, and a test reported without it is void.

On a proper reading of the IAAP schedules, a compensating control substitutes for a requirement only where the substitution is approved in advance and recorded against the exception. The committee minuted the point: non-compliance suspends the delegate's authority for the matter in question until the Partnership Advisory Board restores it. As the schedules allocate it, labelled schedule with the instrument list attached is the accountable function here, testing Investment Committee chair under Edition 1.0. Where it bites, because this edition governs delegated authority by cheque size, reserved matters and the original signing schedule, the requirement reaches commitments made under an unexpired exception and no wider.

Read with the IAAP schedules, the reviewer who clears an issue records the basis of clearance, and a cleared issue reopens automatically if the basis is later shown to be wrong. Should that occur, an approval given in breach of this standard is recorded as invalid and the matter is re-tabled. As the schedules allocate it, signed clearance form with the date of search bears it in Investment Authority and Approval Policy, Edition 1.0, with a Compliance Officer verification. Scoped to this edition, the Partnership Advisory Board applies this to delegated authority by cheque size, reserved matters and the original signing schedule by examining all new platform commitments in the period at each measurement point.

By the terms of the IAAP standard, a compensating control substitutes for a requirement only where the substitution is approved in advance and recorded against the exception. Should that occur, an approval given in breach of this standard is recorded as invalid and the matter is re-tabled. On the assignment of duties, notification record with send and receipt times is the accountable function here, testing Chief Operating Officer under Edition 1.0. By way of

illustration, the Office of the General Counsel reads this against delegated authority by cheque size, reserved matters and the original signing schedule, taking matters where two source records disagreed as the tested set.

For the avoidance of doubt under IAAP version 1.0, the effective date of an instrument governs its application, and a later drafting date does not displace an earlier effective date. The register treats this strictly: an approval given in breach of this standard is recorded as invalid and the matter is re-tabled. In the accountability chain, arbitration log entry naming both sources answers for it under Edition 1.0, on a Deal Operations manager test cycle. In practice under this edition, in the context of delegated authority by cheque size, reserved matters and the original signing schedule this bears on matters approved between committee meetings, which is why the test names its population.

7. Monitoring and reporting

IAAP version 1.0 provides, within the scope stated above, that a matter within a reserved category may not be approved by a delegate, and an approval given without the reserved-matter check is void rather than merely irregular. In such a case, where the standard is not met the opportunity is withdrawn from the agenda rather than approved subject to conditions. As to ownership, arbitration log entry naming both sources bears it in Investment Authority and Approval Policy, Edition 1.0, with a Deal Operations manager verification. Given what this edition governs, the Partnership Advisory Board applies this to delegated authority by cheque size, reserved matters and the original signing schedule by examining matters approved between committee meetings at each measurement point.

On the authority of the Partnership Advisory Board, a delegate exceeding a band ratifies nothing by acting, and the action stands or falls on the ratification the committee subsequently gives it. As recorded at adoption, an approval given in breach of this standard is recorded as invalid and the matter is re-tabled. Within the register, calendar extract for the quarter of closing retains the duty throughout Edition 1.0, evidenced Chief Operating Officer. In application, applied to delegated authority by cheque size, reserved matters and the original signing schedule, the standard is tested over transactions where a delegate signed and the result is minuted.

Once a position is held under IAAP version 1.0, the audit trail for a mark is retained for the life of the position and afterwards, whether or not the position is realised. The sanction is plain: the finding stays open on the register until the evidence is produced, whatever the outcome of the transaction. By assignment, reserve worksheet countersigned by the deal partner holds it for the duration of Edition 1.0, with testing Fund Controller. Given what this edition governs, for delegated authority by cheque size, reserved matters and the original signing schedule the operative population is commitments made under an unexpired exception, and a test reported without it is void.

As the IAAP control register records, the evidence named against a control must be on file before the decision is taken, and a decision recorded without it is reopened at the next committee meeting. Failing that, the finding stays open on the register until the evidence is produced, whatever the outcome of the transaction. On the assignment of duties, signed clearance form with the date of search is named as owner of record in Edition 1.0 and tests Compliance Officer. In application, the reference population for delegated authority by cheque size, reserved matters and the original signing schedule under this edition is positions with an unclosed monitoring finding.

Where the evidence before the Partnership Advisory Board is incomplete, the population a test is measured over is stated with the test, and a test reported without its population is treated as not performed. As to consequence, an approval given in breach of this standard is recorded as invalid and the matter is re-tabled. As the schedules allocate it, notification record with send and receipt times is the accountable function here, testing Chief Operating Officer under Edition 1.0. As the instrument is scoped, applied to delegated authority by cheque size, reserved matters and the original signing schedule, the standard is tested over positions whose model was rebuilt in the period and the result is minuted.

IAAP version 1.0 makes the standard testable, so escalation is by severity rather than by seniority of the person raising it, and a severity assessment is itself reviewable. Enforcement follows automatically: a failure here is a reportable control breach and is minuted as such. In the accountability chain, ageing report with the flagged lines initialled carries the control in Investment Authority and Approval Policy, Edition 1.0, tested Fund Controller. As the scope note records, scoped to delegated authority by cheque size, reserved matters and the original signing schedule, the control bites on matters approved between committee meetings and is reported on that basis.

8. Version administration

Nothing in this instrument survived 2020-09-30 as a current standard, though its treatment of delegated authority by cheque size, reserved matters and the original signing schedule remains the reference for decisions taken while it was in force, and the control testing log records those tests.

Once a position is held under IAAP version 1.0, a compensating control substitutes for a requirement only where the substitution is approved in advance and recorded against the exception. Should that occur, a failure here is a reportable control breach and is minuted as such. Operationally, allocation worksheet and eligibility list is named as owner of record in Edition 1.0 and tests Compliance Officer. On its own subject matter, in the context of delegated authority by cheque size, reserved matters and the original signing schedule this bears on commitments made under an unexpired exception, which is why the test names its population.

Where a delegate of the Partnership Advisory Board acts, a prior exception creates no standing waiver, and a request that relies on a prior exception is treated as a fresh request on its own facts. Where it is not met, where the standard is not met the opportunity is withdrawn from the agenda rather than approved subject to conditions. On the control map, labelled schedule with the instrument list attached bears it in Investment Authority and Approval Policy, Edition 1.0, with a Investment Committee chair verification. Confined to its own field, because this edition governs

delegated authority by cheque size, reserved matters and the original signing schedule, the requirement reaches positions whose model was rebuilt in the period and no wider.

On the authority of the Partnership Advisory Board, the model owner of record is the person accountable for a figure reaching a recommendation, and that accountability does not pass with the spreadsheet. By way of enforcement, the consequence of failure is that the matter may not proceed to a commitment until the gap is closed. In control terms, ageing report with the flagged lines initialled is the accountable function here, testing Fund Controller under Edition 1.0. On the facts this edition addresses, because this edition governs delegated authority by cheque size, reserved matters and the original signing schedule, the requirement reaches commitments made under an unexpired exception and no wider.

In the terms IAAP version 1.0 uses, the evidence named against a control must be on file before the decision is taken, and a decision recorded without it is reopened at the next committee meeting. There is no discretion here: where the standard is not met the opportunity is withdrawn from the agenda rather than approved subject to conditions. As the schedules allocate it, seat schedule with instrument references is accountable, under the control of Investment Authority and Approval Policy, Edition 1.0 tested General Counsel. Read narrowly, for delegated authority by cheque size, reserved matters and the original signing schedule the operative population is positions whose model was rebuilt in the period, and a test reported without it is void.

As applied by the IAAP monitoring calendar, escalation is by severity rather than by seniority of the person raising it, and a severity assessment is itself reviewable. The sanction is plain: the consequence of failure is that the matter may not proceed to a commitment until the gap is closed. In control terms, allocation worksheet and eligibility list answers for it under Edition 1.0, on a Compliance Officer test cycle. Scoped to this edition, the Partnership Advisory Board applies this to delegated authority by cheque size, reserved matters and the original signing schedule by examining co-invest allocations to the parallel vehicle at each measurement point.

the Partnership Advisory Board expects, under IAAP version 1.0, that the audit trail for a mark is retained for the life of the position and afterwards, whether or not the position is realised. The instrument provides that the position is added to the watch list and reported at each subsequent meeting until closed. On the control map, arbitration log entry naming both sources holds it for the duration of Edition 1.0, with testing Deal Operations manager. Given what this edition governs, in the context of delegated authority by cheque size, reserved matters and the original signing schedule this bears on co-invest allocations to the parallel vehicle, which is why the test names its population.
