CUSTOMER AND COMMERCIAL DILIGENCE REVIEW - RECORD 002

Helioscope Robotics, Inc. - diligence file reference CUSTOMER_DILIGENCE-002

Scope of the Caldera Cold Chain account review

Caldera Cold Chain was selected for account-level fieldwork because it sits in temperature-controlled grocery distribution across 3 operating sites, a footprint wide enough that a single unhappy building would not by itself explain the relationship temperature management describes as cool, unresolved reliability grievance in freezer aisles. Fieldwork covered the order documents, the executed acceptance protocols, the metered usage extracts, the support export, and the renewal correspondence, with 4 reference conversations held directly rather than through the company. Ferdinand Achterberg-Lo was interviewed by video call with a follow-up email on 2026-03-08 and gave the longest of those conversations at 56 minutes. Notes taken on 2026-04-05 record Emeka Onwuachi praising that implementation engineers were candid about what the pilot would not prove beside the complaint that the analytics module is priced separately and was never budgeted. Caldera Cold Chain relies on the renewal correspondence file for its own account of the position, and it shows what each party put in writing about intent. Rafferty Osgood-Blaine would re-buy on the basis of yes, and has already sponsored an expansion, having first complained that reporting cannot be reconciled against the customer's own labour standard. The credit note sequence for Caldera Cold Chain was produced on request and shows what was conceded and in which period. Notes taken on 2026-03-08 record Ferdinand Achterberg-Lo praising that implementation engineers were candid about what the pilot would not prove beside the complaint that traffic management degrades when aisle congestion exceeds design load. The site labour standard for Caldera Cold Chain was produced on request and shows the baseline against which benefits are claimed. Beatrix Ollenhauer answered on re-buy with undecided pending the current escalation and would not be drawn further on price or on term. Caldera Cold Chain let us check the site labour standard against the customer's own copy, and it shows the baseline against which benefits are claimed. Notes taken on 2026-03-08 record Rowland Achterhof praising that spare-parts logistics were faster than the incumbent conveyor vendor beside the complaint that reporting cannot be reconciled against the customer's own labour standard. Caldera Cold Chain was asked for the works council consultation note precisely because it bears on the labour constraints on further automation. Ferdinand Achterberg-Lo answered on re-buy with no, would run a competitive process first and would not be drawn further on price or on term.

Devrim Oksuz agreed to speak on the record about procurement history, which is unusual and worth stating, because most buy-side reference programmes reach only the operating sponsor and then generalise about commercial intent from an operator's view. What we could reach was uneven: the operating layer answered freely, whereas Hallie Tsuruoka deferred two questions on renewal budget to the procurement function. We draw no adverse inference, but it does mean the renewal probability recorded later in this file rests on procurement statements that were not independently corroborated. Notes taken on 2026-04-05 record Emeka Onwuachi praising that implementation engineers were candid about what the pilot would not prove beside the complaint that the analytics module is priced separately and was never budgeted. Caldera Cold Chain let us check the conditional acceptance certificate against the customer's own copy, and it shows which items were carried forward as punch. Praise from Noor Al-Rashidi took the form that implementation engineers were candid about what the pilot would not prove, and it came without prompting. The pilot charter obtained from Caldera Cold Chain was read in full rather than in extract, since it shows what the parties agreed the pilot had to prove. Ferdinand Achterberg-Lo, introduced by Caldera Cold Chain as a willing reference, nonetheless complained that traffic management degrades when aisle congestion exceeds design load. The site labour standard for Caldera Cold Chain was produced on request and shows the baseline against which benefits are claimed. Leocadia Ferrante, the shift superintendent, outbound, spoke on 2026-03-21 and praised that firmware rollbacks were quick when a release misbehaved, answering the re-buy question with no, would run a competitive process first. Reading the credit note sequence for Caldera Cold Chain is what establishes what was conceded and in which period. Ferdinand Achterberg-Lo, the inventory control supervisor, spoke on 2026-03-08 and praised that implementation engineers were candid about what the pilot would not prove, answering the re-buy question with no, would run a competitive process first. The works council consultation note held by Caldera Cold Chain is the document that decides the point, relied upon for the labour constraints on further automation. Perrine Lacoste-Mbeki, the procurement category manager, spoke on 2026-02-23 and praised that implementation engineers were candid about what the pilot would not prove, answering the re-buy question with yes, but only for high-velocity zones.

Documents obtained from the company were reconciled to documents obtained from the customer wherever both existed, and the 16 milestones that ran more than twenty days late were traced to a named cause rather than accepted as generic implementation drift. Readers should note three limitations: the metered volumes come from the company's own console and cannot be independently recomputed, the customer declined to release its labour standard in full, and payment behaviour was assessed from the aged receivable listing rather than from bank records. Nothing in this file states or implies a view on the transaction under negotiation; it addresses the durability of one commercial relationship. Perrine Lacoste-Mbeki volunteered that implementation engineers were candid about what the pilot would not prove, and the claim on dock-to-stock hours on inbound receipts was substantiated: figures tie to the customer's own weekly operations pack. The conditional acceptance certificate held by Caldera Cold Chain is the document that decides the point, relied upon for which items were carried forward as punch. Notes taken on 2026-03-24 record Noor Al-Rashidi praising that implementation engineers were candid about what the pilot would not prove beside the complaint that the analytics module is priced separately and was never budgeted. Caldera Cold Chain relies on the conditional acceptance certificate for its own account of the position, and it shows which items were carried forward as punch. Because Beatrix Ollenhauer sees the fleet every shift, the first question put was about dock-to-stock hours on inbound receipts, answered at 36 per cent. The support ticket export sits on the Caldera Cold Chain file and is the source for how each incident was classified for severity. Perrine Lacoste-Mbeki, introduced by Caldera Cold Chain as a willing reference, nonetheless complained that overage billing surprised the site in two consecutive quarters. Caldera Cold Chain was asked for the pilot charter precisely because it bears on what the parties agreed the pilot had to prove. Ferdinand Achterberg-Lo, the inventory control supervisor, spoke on 2026-03-08 and praised that implementation engineers were candid about what the pilot would not prove, answering the re-buy question with no, would run a competitive process first. The renewal correspondence file obtained from Caldera Cold Chain was read in full rather than in extract, since it shows what each party put in writing about intent. Because Rowland Achterhof sees the fleet every shift, the first question put was about reduction in temporary labour headcount at peak, answered at 35 per cent.

Said, shown and reported: how the Caldera Cold Chain evidence was handled

Three categories of statement are kept apart throughout this file, and the separation is not pedantry: what a customer said, what a document shows, and what the company reported are different kinds of evidence with different reliability. Statements are attributed to a named person, documents are cited by name and date, and management representations are labelled as such rather than absorbed into narrative. A point supported by all three is treated as settled. Whatever the company's materials claim, Dashiell Okonjo described the position on order cycle time from release to pack-out as unverifiable: the customer declined to release underlying data. The amended order form held by Caldera Cold Chain is the document that decides the point, relied upon for nothing, because it was never produced. Perrine Lacoste-Mbeki, introduced by Caldera Cold Chain as a willing reference, nonetheless complained that overage billing surprised the site in two consecutive quarters. Caldera Cold Chain relies on the pilot charter for its own account of the position, and it shows what the parties agreed the pilot had to prove. Talking to Perrine Lacoste-Mbeki for 61 minutes by telephone produced the claim that dock-to-stock hours on inbound receipts improved by 32 per cent, substantiated: figures tie to the customer's own weekly operations pack. Caldera Cold Chain was asked for the joint escalation minutes precisely because it bears on what was agreed when the relationship was under strain. Dashiell Okonjo, the site general manager, spoke on 2026-04-13 and praised that spare-parts logistics were faster than the incumbent conveyor vendor, answering the re-buy question with no, would run a competitive process first. Reading the credit note sequence for Caldera Cold Chain is what establishes what was conceded and in which period. Notes taken on 2026-03-24 record Noor Al-Rashidi praising that implementation engineers were candid about what the pilot would not prove beside the complaint that the analytics module is priced separately and was never budgeted. The renewal correspondence file sits on the Caldera Cold Chain file and is the source for what each party put in writing about intent. Talking to Ferdinand Achterberg-Lo for 56 minutes by video call with a follow-up email produced the claim that dock-to-stock hours on inbound receipts improved by 16 per cent, not substantiated: the interviewee described it as an impression.

Disagreement is the useful case, and it was resolved in favour of the document only where the document is contemporaneous and unambiguous. Unresolved conflicts are recorded as conflicts, because a diligence file that resolves every conflict has usually resolved them by preferring whichever source was easiest to obtain. Devrim Oksuz and the company's account owner disagree on at least two matters of fact in this account, and both versions appear in the

comparison schedule with the documentary position beside them. Talking to Leocadia Ferrante for 34 minutes by video call with a follow-up email produced the claim that overtime hours in the outbound department improved by 25 per cent, substantiated: figures tie to the customer's own weekly operations pack. The executed acceptance test protocol sits on the Caldera Cold Chain file and is the source for the tested criteria and the signatures on them. Emeka Onwuachi answered on re-buy with yes, and has already sponsored an expansion and would not be drawn further on price or on term. Caldera Cold Chain was asked for the works council consultation note precisely because it bears on the labour constraints on further automation. Rowland Achterhof, the vice president of distribution, spoke on 2026-03-08 and praised that spare-parts logistics were faster than the incumbent conveyor vendor, answering the re-buy question with no comment; referred the question to procurement. The amended order form held by Caldera Cold Chain is the document that decides the point, relied upon for nothing, because it was never produced. Beatrix Ollenhauer, speaking as regional maintenance and reliability manager, said that the analytics module is priced separately and was never budgeted and pressed the point twice before the call ended. The conditional acceptance certificate held by Caldera Cold Chain is the document that decides the point, relied upon for which items were carried forward as punch. Perrine Lacoste-Mbeki, introduced by Caldera Cold Chain as a willing reference, nonetheless complained that overage billing surprised the site in two consecutive quarters. Caldera Cold Chain let us check the site labour standard against the customer's own copy, and it shows the baseline against which benefits are claimed. Rowland Achterhof, the vice president of distribution, spoke on 2026-03-08 and praised that spare-parts logistics were faster than the incumbent conveyor vendor, answering the re-buy question with no comment; referred the question to procurement.

Reliance is stated for every source used, since an investor reading this file needs to know which conclusions would move if one document turned out to be unreliable. Reliance was withheld from two sources, in both cases because provenance could not be established: an undated extract and a summary prepared for us rather than in the ordinary course. Purpose-made summaries carry little weight, and that is a general principle rather than a comment on anyone's good faith. Reading the console meter extract for Caldera Cold Chain is what establishes the volume the company recorded. Leocadia Ferrante, speaking as shift superintendent, outbound, said that the analytics module is priced separately and was never budgeted and pressed the point twice before the call ended. The renewal correspondence file sits on the Caldera Cold Chain file and is the source for what each party put in writing about intent. Beatrix Ollenhauer answered on re-buy with undecided pending the current escalation and would not be drawn further on price or on term. The works council consultation note at Caldera Cold Chain carries more weight than any summary, since it shows the labour constraints on further automation. Beatrix Ollenhauer answered on re-buy with undecided pending the current escalation and would not be drawn further on price or on term. The renewal correspondence file sits on the Caldera Cold Chain file and is the source for what each party put in writing about intent. Emeka Onwuachi treats the relationship as one where implementation engineers were candid about what the pilot would not prove, and the reduction in temporary labour headcount at peak figure offered was 21 per cent. The conditional acceptance certificate held by Caldera Cold Chain is the document that decides the point, relied upon for which items were carried forward as punch. Rafferty Osgood-Blaine, speaking as warehouse systems manager, said that reporting cannot be reconciled against the customer's own labour standard and pressed the point twice before the call ended. Caldera Cold Chain relies on the renewal correspondence file for its own account of the position, and it shows what each party put in writing about intent.

Reference-call record: Caldera Cold Chain

The Caldera Cold Chain workpaper shows that re-buy intent divides along the operations and procurement line rather than by site, and the schedule below is the evidence for it, drawn from 3 records rather than from a summary prepared for us. Devrim Oksuz reads the same way: no interviewee refused to speak, which is unusual for a base of this size. This Caldera Cold Chain review chose this grain deliberately, because an account-level average at Caldera Cold Chain conceals the site-to-site variation that decides how this relationship behaves at renewal. Because Beatrix Ollenhauer sees the fleet every shift, the first question put was about dock-to-stock hours on inbound receipts, answered at 36 per cent. Noor Al-Rashidi gave 47 minutes on 2026-03-24 and made one quantified claim, on order cycle time from release to pack-out, of 20 per cent. Dashiell Okonjo, speaking as site general manager, said that on-site engineering days were consumed by defects rather than tuning and pressed the point twice before the call ended. Noor Al-Rashidi answered on re-buy with probably, with a shorter initial term and would not be drawn further on price or on term. Idunn Haraldsen, speaking as IT applications manager for the host WMS, said that the analytics module is priced separately and was never

budgeted and pressed the point twice before the call ended. Idunn Haraldsen, speaking as IT applications manager for the host WMS, said that the analytics module is priced separately and was never budgeted and pressed the point twice before the call ended. Perrine Lacoste-Mbeki, introduced by Caldera Cold Chain as a willing reference, nonetheless complained that overage billing surprised the site in two consecutive quarters. Rafferty Osgood-Blaine would re-buy on the basis of yes, and has already sponsored an expansion, having first complained that reporting cannot be reconciled against the customer's own labour standard.

Hallie Tsuruoka carries two qualifications: the log records what was said, not whether it is correct, and re-buy answers were given without any price being put on the table. The Tracy team also observed, when the schedule was put to the customer, that the strongest advocates are the people who use the fleet console daily, which is consistent with what the documents show without being proved by them. The Caldera Cold Chain estate accepted the schedule as a fair summary of the underlying records, subject to those qualifications and to the open items listed in this review. Whatever the company's materials claim, Emeka Onwuachi described the position on reduction in temporary labour headcount at peak as unverifiable: the customer declined to release underlying data. Perrine Lacoste-Mbeki, introduced by Caldera Cold Chain as a willing reference, nonetheless complained that overage billing surprised the site in two consecutive quarters. Notes taken on 2026-04-05 record Emeka Onwuachi praising that implementation engineers were candid about what the pilot would not prove beside the complaint that the analytics module is priced separately and was never budgeted. Noor Al-Rashidi would re-buy on the basis of probably, with a shorter initial term, having first complained that the analytics module is priced separately and was never budgeted. Rowland Achterhof was reached by video call with a follow-up email and gave a re-buy answer of no comment; referred the question to procurement, which sits oddly beside the praise that spare-parts logistics were faster than the incumbent conveyor vendor. Because Rowland Achterhof sees the fleet every shift, the first question put was about reduction in temporary labour headcount at peak, answered at 35 per cent. Rafferty Osgood-Blaine, introduced by Caldera Cold Chain as a willing reference, nonetheless complained that reporting cannot be reconciled against the customer's own labour standard. Rafferty Osgood-Blaine, the warehouse systems manager, spoke on 2026-03-26 and praised that the account team escalated without being chased, answering the re-buy question with yes, and has already sponsored an expansion.

Schedule 2.1 - Caldera Cold Chain: reference-call log and re-buy intent

Interviewee	Role	Call date	Would re-buy	Praised	Criticised	Claim substantiated
Ferdinand Achterberg-Lo	inventory control supervisor	2026-03-08	no, would run a competitive process first	implementation engineers were candid about what the pilot would not prove	traffic management degrades when aisle congestion exceeds design load	not substantiated
Rowland Achterhof	vice president of distribution	2026-03-08	no comment; referred the question to procurement	spare-parts logistics were faster than the incumbent conveyor vendor	reporting cannot be reconciled against the customer's own labour standard	contradicted
Beatrix Ollenhauer	regional maintenance and reliability manager	2026-03-04	undecided pending the current escalation	robots tolerated the mixed pallet and tote presentations on the floor	the analytics module is priced separately and was never budgeted	partly substantiated

Usage and invoice reconciliation supporting the Caldera Cold Chain review

Devrim Oksuz puts on the record that overage arises seasonally and not because the entitlement was set too low at signature, and the schedule below is the evidence for it, drawn from 3 records rather than from a summary prepared for us. Hallie Tsuruoka carries a further observation: entitlement was keyed from a superseded order form in at least one period. Caldera Cold Chain management is reported at this grain to make comparison possible, because an account-level average at Caldera Cold Chain conceals the site-to-site variation that decides how this relationship behaves at renewal. Caldera Cold Chain carried overage in April of 6,475 picks, which the invoice reflects and the site disputes on definition rather than count. Caldera Cold Chain in December shows entitlement of 102,242 against consumption of 117,562, recorded as written off as a goodwill concession. Caldera Cold Chain was credited in October with $0, against an invoiced amount of $48,704. Billing for January charged Caldera Cold Chain $44,800 on a metered volume of 97,526,

and the exception was no exception raised. Caldera Cold Chain carried overage in July of 15,847 picks, which the invoice reflects and the site disputes on definition rather than count. Meter and invoice diverge in August at Caldera Cold Chain by $149, which the parties treat as no exception raised. Caldera Cold Chain was credited in September with $0, against an invoiced amount of $44,800. Caldera Cold Chain in September shows entitlement of 102,242 against consumption of 82,730, recorded as no exception raised.

The Tracy team must be read subject to two limits: the reconciliation is period by period because an annual view hides offsetting errors, and metered volumes come from the company's console and cannot be independently recomputed. The Caldera Cold Chain estate also observed, when the schedule was put to the customer, that the variance column is small in every period and never nets to nothing, which is consistent with what the documents show without being proved by them. This Caldera Cold Chain review accepted the schedule as a fair summary of the underlying records, subject to those qualifications and to the open items listed in this review. Caldera Cold Chain metered December at 117,562 picks against an entitlement of 102,242, and was invoiced $49,702. Caldera Cold Chain was credited in April with $0, against an invoiced amount of $44,800. Reconciling June leaves Caldera Cold Chain with a variance of $50, no exception raised. Caldera Cold Chain's position for January was settled as no exception raised, on an invoice of $44,800. Console records for January at Caldera Cold Chain show 98,259 picks, and the invoice followed at $44,800. Console records for January at Caldera Cold Chain show 98,259 picks, and the invoice followed at $44,800. Billing for August charged Caldera Cold Chain $44,963 on a metered volume of 102,753, and the exception was no exception raised. Reconciling December leaves Caldera Cold Chain with a variance of $-219, no exception raised.

Schedule 2.2 - Caldera Cold Chain: usage-to-invoice reconciliation by period

Period	Metered volume	Entitlement	Overage	Invoiced	Credits	Variance	Disposition
2023-01	98,259	102,242	0	$44,800	nil	$-149	no exception raised
2023-02	68,950	102,242	0	$44,800	nil	$249	no exception raised
2023-03	108,291	102,242	6,049	$46,735	nil	$-208	no exception raised

Deployment sequence and go-live history at Caldera Cold Chain

Tracy (CAL-01) took the first site survey on 2022-07-18 against a plan of 2022-05-18, and the 61-day difference was attributed to labour agreement consultation with the site works council. What followed ran in the usual order: radio-frequency readiness, interface build against the host warehouse-management system, sandbox integration testing, then a pilot cell before any protocol was executed. Tracy (CAL-01) reached pilot go-live on 2023-03-20, which is inside the window the order form contemplated. At Tracy the gate for final acceptance certificate was planned for 2023-08-05 and closed on 2023-10-02, the delay being seasonal peak freeze: no cutovers permitted during the retail quarter. Caldera Cold Chain let us check the aged receivable listing against the customer's own copy, and it shows how promptly this customer actually pays. Acceptance slipped 61 days at Woodland before conditional acceptance certificate was recorded as conditional acceptance issued. The conditional acceptance certificate at Caldera Cold Chain carries more weight than any summary, since it shows which items were carried forward as punch. Where the plan assumed a clean run, Woodland instead took 10 extra days over integration test in the customer sandbox, for wireless survey failed in the high-bay aisles, access points re-sited. Caldera Cold Chain relies on the renewal correspondence file for its own account of the position, and it shows what each party put in writing about intent. Although Tracy treats it as outside anyone's control, final acceptance certificate still moved to 2023-10-02 for seasonal peak freeze: no cutovers permitted during the retail quarter. The amended order form obtained from Caldera Cold Chain was read in full rather than in extract, since it shows nothing, because it was never produced. Acceptance slipped 55 days at Patterson before acceptance test protocol execution was recorded as closed. The conditional acceptance certificate held by Caldera Cold Chain is the document that decides the point, relied upon for which items were carried forward as punch. Turning to Patterson, the tracker puts conditional acceptance certificate at 2023-09-23 where the plan said 2023-09-15, the gap being seasonal peak freeze: no cutovers permitted during the retail quarter.

Interface work is where this deployment differed from the company's published sequence, because Caldera Cold Chain runs a host system whose release calendar it does not control and would not move. Message design absorbed most of the elapsed time, and two of the mapping rounds were driven by customer master data on slot dimensions rather than

by anything the company controlled. That distinction matters for how slippage is attributed, and it is examined against the documents later in this file rather than settled here. The renewal correspondence file sits on the Caldera Cold Chain file and is the source for what each party put in writing about intent. Tracy lost time because seasonal peak freeze: no cutovers permitted during the retail quarter, and final acceptance certificate moved to 2023-10-02 from a planned 2023-08-05. Caldera Cold Chain was asked for the credit note sequence precisely because it bears on what was conceded and in which period. On the evidence from Tracy, conditional acceptance certificate slipped 21 days and the status now reads conditional acceptance issued. Caldera Cold Chain was asked for the works council consultation note precisely because it bears on the labour constraints on further automation. Tracy closed acceptance test protocol execution on 2023-04-05 and the certificate records 0 open items. Caldera Cold Chain relies on the aged receivable listing for its own account of the position, and it shows how promptly this customer actually pays. Turning to Patterson, the tracker puts conditional acceptance certificate at 2023-09-23 where the plan said 2023-09-15, the gap being seasonal peak freeze: no cutovers permitted during the retail quarter. Reading the support ticket export for Caldera Cold Chain is what establishes how each incident was classified for severity. Patterson (CAL-02) reached pilot cell go-live on 2023-06-21, status closed, with 0 punch items open at that gate. Reading the console meter extract for Caldera Cold Chain is what establishes the volume the company recorded.

Hallie Tsuruoka described the deployment as slower than promised but not badly run, and offered the charger electrical works as an example of a delay the site itself caused and did not blame the vendor for. Company implementation notes read differently, recording the same period as awaiting customer readiness without naming the electrical permit, so the two records agree on the fact and disagree on the framing. The disagreement is preserved rather than resolved because the pattern recurs across several accounts in this pack and is itself a finding. Certificates held at Patterson put conditional acceptance certificate on 2023-09-23 and explain the 8 days by seasonal peak freeze: no cutovers permitted during the retail quarter. Caldera Cold Chain relies on the joint escalation minutes for its own account of the position, and it shows what was agreed when the relationship was under strain. Turning to Patterson, the tracker puts final acceptance certificate at 2024-03-31 where the plan said 2024-01-26, the gap being facility readiness: mezzanine steel and charger bays incomplete. The works council consultation note obtained from Caldera Cold Chain was read in full rather than in extract, since it shows the labour constraints on further automation. Although Patterson treats it as outside anyone's control, site survey and slotting scan still moved to 2022-11-12 for labour agreement consultation with the site works council. The host interface message log sits on the Caldera Cold Chain file and is the source for how the interface behaved on receipt confirmations. Once Patterson had dealt with customer master-data cleanup for slot dimensions ran long, the site completed punch-list closure review on 2023-12-21. The amended order form for Caldera Cold Chain was produced on request and shows nothing, because it was never produced. At Tracy the gate for pilot cell go-live was planned for 2023-03-17 and closed on 2023-03-20, the delay being host WMS upgrade re-sequenced the interface build. The aged receivable listing held by Caldera Cold Chain is the document that decides the point, relied upon for how promptly this customer actually pays. Progress at Patterson shows punch-list closure review signed off on 2023-12-21 against 2023-10-27 as planned.

Buying centre and procurement dynamics at Caldera Cold Chain

Devrim Oksuz, Category Manager for Automation controls the paper and Hallie Tsuruoka, Chief Supply Chain Officer controls the budget, and in temperature-controlled grocery distribution that split usually decides how a renewal is priced rather than whether it happens. Separate conversations were held with each, which is how the divergence in their accounts of the overage dispute came to light. The dispute had not been documented between them, which suggests the account team is managing two conversations rather than one relationship. Idunn Haraldsen volunteered that implementation engineers were candid about what the pilot would not prove, and the claim on overtime hours in the outbound department was unverifiable: the customer declined to release underlying data. Caldera Cold Chain carried overage in March of 6,049 picks, which the invoice reflects and the site disputes on definition rather than count. Notes taken on 2026-03-26 record Rafferty Osgood-Blaine praising that the account team escalated without being chased beside the complaint that reporting cannot be reconciled against the customer's own labour standard. Billing for June charged Caldera Cold Chain $49,734 on a metered volume of 117,663, and the exception was partially credited; the balance remains contested. Emeka Onwuachi treats the relationship as one where implementation engineers were candid about what the pilot would not prove, and the reduction in temporary labour headcount at peak figure offered was 21 per cent.

Credits reaching Caldera Cold Chain in the February cycle came to $0, and the balance remains as no exception raised. Idunn Haraldsen volunteered that implementation engineers were candid about what the pilot would not prove, and the claim on overtime hours in the outbound department was unverifiable: the customer declined to release underlying data. Billing for March charged Caldera Cold Chain $44,800 on a metered volume of 100,197, and the exception was re-invoiced after the entitlement was corrected. Leocadia Ferrante would re-buy on the basis of no, would run a competitive process first, having first complained that the analytics module is priced separately and was never budgeted. Caldera Cold Chain metered May at 98,493 picks against an entitlement of 102,242, and was invoiced $44,800. Perrine Lacoste-Mbeki volunteered that implementation engineers were candid about what the pilot would not prove, and the claim on dock-to-stock hours on inbound receipts was substantiated: figures tie to the customer's own weekly operations pack.

Signature authority sits above both contacts for any increase in committed spend, and the threshold was described to us in terms of a capital approval process rather than a number. Expansion competes for capital against other projects, and the current queue at this customer is dominated by a conveyor retrofit and a transport-management system replacement. Those projects do not indicate a loss of confidence, which is worth saying because a flat renewal at this account will look like stalled expansion in a cohort chart. Meter and invoice diverge in January at Caldera Cold Chain by $-149, which the parties treat as no exception raised. Ferdinand Achterberg-Lo, the inventory control supervisor, spoke on 2026-03-08 and praised that implementation engineers were candid about what the pilot would not prove, answering the re-buy question with no, would run a competitive process first. Consumption recorded for Caldera Cold Chain in April ran to 108,717 picks, 6,475 of them above entitlement. Dashiell Okonjo, the site general manager, spoke on 2026-04-13 and praised that spare-parts logistics were faster than the incumbent conveyor vendor, answering the re-buy question with no, would run a competitive process first. Console records for February at Caldera Cold Chain show 84,337 picks, and the invoice followed at $44,800. Rafferty Osgood-Blaine, the warehouse systems manager, spoke on 2026-03-26 and praised that the account team escalated without being chased, answering the re-buy question with yes, and has already sponsored an expansion. Credits reaching Caldera Cold Chain in the December cycle came to $0, and the balance remains as no exception raised. Rowland Achterhof answered on re-buy with no comment; referred the question to procurement and would not be drawn further on price or on term. Reconciling June leaves Caldera Cold Chain with a variance of $50, no exception raised. Leocadia Ferrante, speaking as shift superintendent, outbound, said that the analytics module is priced separately and was never budgeted and pressed the point twice before the call ended. Meter and invoice diverge in July at Caldera Cold Chain by $-50, which the parties treat as no exception raised.

Procurement's stated intent is to benchmark, and the benchmarking it described is real: a specification was drafted and two vendors were approached informally. Nothing has gone out formally, and the sponsor said he would resist one on the grounds that a re-integration would cost more than any discount obtained. Commercially the sponsor view is what protects the renewal, and the account plan we were shown does not mention it. Caldera Cold Chain in March shows entitlement of 102,242 against consumption of 108,291, recorded as no exception raised. Because Rowland Achterhof sees the fleet every shift, the first question put was about reduction in temporary labour headcount at peak, answered at 35 per cent. Credits reaching Caldera Cold Chain in the May cycle came to $0, and the balance remains as no exception raised. Dashiell Okonjo treats the relationship as one where spare-parts logistics were faster than the incumbent conveyor vendor, and the order cycle time from release to pack-out figure offered was 28 per cent. Credits reaching Caldera Cold Chain in the May cycle came to $0, and the balance remains as no exception raised. Beatrix Ollenhauer, introduced by Caldera Cold Chain as a willing reference, nonetheless complained that the analytics module is priced separately and was never budgeted. Caldera Cold Chain carried overage in July of 15,847 picks, which the invoice reflects and the site disputes on definition rather than count. Ferdinand Achterberg-Lo, the inventory control supervisor, spoke on 2026-03-08 and praised that implementation engineers were candid about what the pilot would not prove, answering the re-buy question with no, would run a competitive process first. Overage in May at Caldera Cold Chain came to 0 picks, entitlement having been fixed at signature. Ferdinand Achterberg-Lo, introduced by Caldera Cold Chain as a willing reference, nonetheless complained that traffic management degrades when aisle congestion exceeds design load. Consumption recorded for Caldera Cold Chain in August ran to 82,730 picks, 0 of them above entitlement.

Caldera Cold Chain: contract shape and account profile

Contracting with Caldera Cold Chain Partners, Inc. began on 2022-01-10 under an initial term of 48 months, structured as fixed term with a single five-year extension option, and priced as hardware purchase plus annual software

and support. Annual contract value sits in the band 0.9m to 1.1m, on net sixty, annual in advance, which places it in the upper half of the customer base by size without making it dominant. Woodland carries the densest fleet at 30 robots and is the site every reference conversation returns to, favourably or otherwise. Praise from Beatrix Ollenhauer took the form that robots tolerated the mixed pallet and tote presentations on the floor, and it came without prompting. At Patterson the gate for integration test in the customer sandbox was planned for 2023-05-08 and closed on 2023-05-18, the delay being customer IT change-freeze extended by two sprint cycles. Idunn Haraldsen volunteered that implementation engineers were candid about what the pilot would not prove, and the claim on overtime hours in the outbound department was unverifiable: the customer declined to release underlying data. Patterson lost time because customer master-data cleanup for slot dimensions ran long, and network and radio-frequency readiness review moved to 2023-02-10 from a planned 2022-12-13. Idunn Haraldsen, speaking as IT applications manager for the host WMS, said that the analytics module is priced separately and was never budgeted and pressed the point twice before the call ended. The slip of 8 days at Patterson on conditional acceptance certificate is the one the customer raises first, and it traces to seasonal peak freeze: no cutovers permitted during the retail quarter. Leocadia Ferrante, introduced by Caldera Cold Chain as a willing reference, nonetheless complained that the analytics module is priced separately and was never budgeted. Woodland logged acceptance test protocol execution on 2023-05-23; the customer attributes the slip to supplier lead time on the conveyor tie-in guard package. Talking to Idunn Haraldsen for 38 minutes by video call with a follow-up email produced the claim that overtime hours in the outbound department improved by 16 per cent, unverifiable: the customer declined to release underlying data. At Woodland the gate for network and radio-frequency readiness review closed on 2022-10-19 inside the planned window, and no cause needs recording. Rafferty Osgood-Blaine, the warehouse systems manager, spoke on 2026-03-26 and praised that the account team escalated without being chased, answering the re-buy question with yes, and has already sponsored an expansion.

Devrim Oksuz, Category Manager for Automation owns the commercial relationship, and Hallie Tsuruoka, Chief Supply Chain Officer sponsors it operationally, a split that matters because the two functions do not describe the relationship in the same terms. Procurement is markedly cooler than the floor, and management's own characterisation of the account as cool, unresolved reliability grievance in freezer aisles sits closer to the operating view than to what procurement told us. Renewal is scheduled for 2028-01-10, with notice due by 2027-10-12 under a 90-day window. At Patterson the gate for wms interface build and message mapping was planned for 2023-02-28 and closed on 2023-03-30, the delay being labour agreement consultation with the site works council. Beatrix Ollenhauer answered on re-buy with undecided pending the current escalation and would not be drawn further on price or on term. Where the plan assumed a clean run, Woodland instead took 52 extra days over wms interface build and message mapping, for validation protocol rewritten after a quality-assurance review. Rowland Achterhof answered on re-buy with no comment; referred the question to procurement and would not be drawn further on price or on term. Tracy closed acceptance test protocol execution on 2023-04-05 and the certificate records 0 open items. Ferdinand Achterberg-Lo, the inventory control supervisor, spoke on 2026-03-08 and praised that implementation engineers were candid about what the pilot would not prove, answering the re-buy question with no, would run a competitive process first. Nothing needed explaining at Woodland for site survey and slotting scan, which was reached on 2022-09-23 as planned. Whatever the company's materials claim, Idunn Haraldsen described the position on overtime hours in the outbound department as unverifiable: the customer declined to release underlying data. Nothing needed explaining at Woodland for site survey and slotting scan, which was reached on 2022-09-23 as planned. Notes taken on 2026-03-08 record Rowland Achterhof praising that spare-parts logistics were faster than the incumbent conveyor vendor beside the complaint that reporting cannot be reconciled against the customer's own labour standard. At Patterson the gate for acceptance test protocol execution was planned for 2023-07-03 and closed on 2023-08-27, the delay being seasonal peak freeze: no cutovers permitted during the retail quarter.

Fleet size across the estate stands at 70 robots spread over Tracy, Patterson, Woodland, and the distribution is uneven enough that account health is really the health of two or three buildings. That unevenness is the feature worth carrying forward: a strong building can carry a weak one through a renewal cycle, and a weak building can generate the ticket volume and credit exposure that later frames the commercial negotiation. Aleksy Wisniewski holds the account on the company side and has done so without interruption, which is more continuity than several other files in this pack show. Once Tracy had dealt with validation protocol rewritten after a quality-assurance review, the site completed network and radio-frequency readiness review on 2022-10-12. Perrine Lacoste-Mbeki, the procurement category

manager, spoke on 2026-02-23 and praised that implementation engineers were candid about what the pilot would not prove, answering the re-buy question with yes, but only for high-velocity zones. Acceptance slipped 55 days at Patterson before acceptance test protocol execution was recorded as closed. Emeka Onwuachi treats the relationship as one where implementation engineers were candid about what the pilot would not prove, and the reduction in temporary labour headcount at peak figure offered was 21 per cent. Woodland closed network and radio-frequency readiness review on 2022-10-19 and the certificate records 0 open items. Notes taken on 2026-03-24 record Noor Al-Rashidi praising that implementation engineers were candid about what the pilot would not prove beside the complaint that the analytics module is priced separately and was never budgeted. Acceptance slipped 65 days at Patterson before final acceptance certificate was recorded as final acceptance granted. Notes taken on 2026-03-08 record Ferdinand Achterberg-Lo praising that implementation engineers were candid about what the pilot would not prove beside the complaint that traffic management degrades when aisle congestion exceeds design load. At Tracy the gate for acceptance test protocol execution closed on 2023-04-05 inside the planned window, and no cause needs recording. Rafferty Osgood-Blaine would re-buy on the basis of yes, and has already sponsored an expansion, having first complained that reporting cannot be reconciled against the customer's own labour standard. Woodland logged integration test in the customer sandbox on 2023-03-02; the customer attributes the slip to wireless survey failed in the high-bay aisles, access points re-sited.

Acceptance certificates and open punch items at Caldera Cold Chain

Conditional acceptance was issued at all 3 sites, each certificate carrying a punch list rather than a clean signature, and 3 of 3 sites have since reached final acceptance. Open punch items across the estate number 47, and they are not cosmetic: they include interface behaviour on receipt confirmations and traffic management in two aisles that the site regards as design issues. Each certificate was read in full. Acceptance slipped 14 days at Woodland before final acceptance certificate was recorded as final acceptance granted. The executed acceptance test protocol sits on the Caldera Cold Chain file and is the source for the tested criteria and the signatures on them. Once Patterson had dealt with customer master-data cleanup for slot dimensions ran long, the site completed network and radio-frequency readiness review on 2023-02-10. Caldera Cold Chain was asked for the joint escalation minutes precisely because it bears on what was agreed when the relationship was under strain. Certificates held at Patterson put conditional acceptance certificate on 2023-09-23 and explain the 8 days by seasonal peak freeze: no cutovers permitted during the retail quarter. The site labour standard for Caldera Cold Chain was produced on request and shows the baseline against which benefits are claimed. Where the plan assumed a clean run, Woodland instead took 10 extra days over integration test in the customer sandbox, for wireless survey failed in the high-bay aisles, access points re-sited. Caldera Cold Chain was asked for the pilot charter precisely because it bears on what the parties agreed the pilot had to prove. Although Tracy treats it as outside anyone's control, site survey and slotting scan still moved to 2022-07-18 for labour agreement consultation with the site works council. Caldera Cold Chain was asked for the support ticket export precisely because it bears on how each incident was classified for severity. Woodland logged acceptance test protocol execution on 2023-05-23; the customer attributes the slip to supplier lead time on the conveyor tie-in guard package.

Revenue recognition is not this workstream's question, but acceptance status touches it, because the order form ties a retention to final acceptance at each site. Retentions outstanding are scheduled below and were agreed with the site rather than taken from the company's ledger, which is why two of the figures differ from the amounts management reported to us. The variance is referred to the finance workstream rather than resolved in this file. Turning to Patterson, the tracker puts conditional acceptance certificate at 2023-09-23 where the plan said 2023-09-15, the gap being seasonal peak freeze: no cutovers permitted during the retail quarter. The renewal correspondence file for Caldera Cold Chain was produced on request and shows what each party put in writing about intent. On the evidence from Tracy, conditional acceptance certificate slipped 21 days and the status now reads conditional acceptance issued. Reading the support ticket export for Caldera Cold Chain is what establishes how each incident was classified for severity. Timing at Woodland held for site survey and slotting scan, which closed on 2022-09-23 as scheduled. The amended order form held by Caldera Cold Chain is the document that decides the point, relied upon for nothing, because it was never produced. Nothing needed explaining at Woodland for network and radio-frequency readiness review, which was reached on 2022-10-19 as planned. The host interface message log for Caldera Cold Chain was produced on request and shows how the interface behaved on receipt confirmations. Tracy (CAL-01) shows acceptance test protocol execution completed on 2023-04-05, status closed, with nothing carried forward on the schedule. Caldera Cold Chain was asked for the pilot charter precisely

because it bears on what the parties agreed the pilot had to prove. At Patterson the gate for conditional acceptance certificate was planned for 2023-09-15 and closed on 2023-09-23, the delay being seasonal peak freeze: no cutovers permitted during the retail quarter.

Tracy (CAL-01) illustrates the pattern that repeats across the estate: conditional acceptance on 2023-05-29 with 1 items open, a closure review that slipped, and a final certificate whose status is now final acceptance granted. The fleet is plainly in productive use regardless, and the punch lists are best read as a live negotiating position rather than as evidence that the deployment failed. The site was asked which reading it holds, and it accepted the second while declining to sign anything that says so. The renewal correspondence file for Caldera Cold Chain was produced on request and shows what each party put in writing about intent. Woodland logged punch-list closure review on 2023-12-12; the customer attributes the slip to labour agreement consultation with the site works council. The joint escalation minutes obtained from Caldera Cold Chain was read in full rather than in extract, since it shows what was agreed when the relationship was under strain. Woodland logged pilot cell go-live on 2023-04-06; the customer attributes the slip to labour agreement consultation with the site works council. Caldera Cold Chain let us check the executed acceptance test protocol against the customer's own copy, and it shows the tested criteria and the signatures on them. Timing at Woodland held for site survey and slotting scan, which closed on 2022-09-23 as scheduled. The host interface message log held by Caldera Cold Chain is the document that decides the point, relied upon for how the interface behaved on receipt confirmations. Although Tracy treats it as outside anyone's control, final acceptance certificate still moved to 2023-10-02 for seasonal peak freeze: no cutovers permitted during the retail quarter. The executed acceptance test protocol sits on the Caldera Cold Chain file and is the source for the tested criteria and the signatures on them. Once Patterson had dealt with facility readiness: mezzanine steel and charger bays incomplete, the site completed final acceptance certificate on 2024-03-31. The site labour standard at Caldera Cold Chain carries more weight than any summary, since it shows the baseline against which benefits are claimed.

Caldera Cold Chain - buying-centre coverage

Hallie Tsuruoka evidences that the account team's own map omits two people we found to be influential, and the schedule below is the evidence for it, drawn from 3 records rather than from a summary prepared for us. The Tracy team reads the same way: coverage of the buying centre is good on operations and thin on finance. The Tracy site is drawn at this grain on purpose, because an account-level average at Caldera Cold Chain conceals the site-to-site variation that decides how this relationship behaves at renewal. Patterson (CAL-02) cleared network and radio-frequency readiness review on 2023-02-10 against a plan of 2022-12-13, a difference of 59 days recorded against customer master-data cleanup for slot dimensions ran long. Rafferty Osgood-Blaine, introduced by Caldera Cold Chain as a willing reference, nonetheless complained that reporting cannot be reconciled against the customer's own labour standard. Tracy (CAL-01) reached site survey and slotting scan on 2022-07-18, status closed, with 0 punch items open at that gate. Dashiell Okonjo treats the relationship as one where spare-parts logistics were faster than the incumbent conveyor vendor, and the order cycle time from release to pack-out figure offered was 28 per cent. Woodland (CAL-03) cleared acceptance test protocol execution on 2023-05-23 against a plan of 2023-04-30, a difference of 23 days recorded against supplier lead time on the conveyor tie-in guard package. Notes taken on 2026-03-08 record Rowland Achterhof praising that spare-parts logistics were faster than the incumbent conveyor vendor beside the complaint that reporting cannot be reconciled against the customer's own labour standard. Progress at Woodland shows conditional acceptance certificate signed off on 2023-09-06 against 2023-07-07 as planned. Beatrix Ollenhauer, introduced by Caldera Cold Chain as a willing reference, nonetheless complained that the analytics module is priced separately and was never budgeted.

The Caldera Cold Chain estate needs two caveats stated: roles are as the contact described them and not as the customer's directory shows, and the map covers the sites reviewed and not the customer's whole organisation. This Caldera Cold Chain review also observed, when the schedule was put to the customer, that the two contacts who control the outcome were both interviewed separately, which is consistent with what the documents show without being proved by them. The Woodland building accepted the schedule as a fair summary of the underlying records, subject to those qualifications and to the open items listed in this review. Ferdinand Achterberg-Lo raised the complaint that traffic management degrades when aisle congestion exceeds design load, and put the improvement in dock-to-stock hours on inbound receipts at 16 per cent. Turning to Tracy, the tracker puts network and radio-frequency readiness review at 2022-10-12 where the plan said 2022-08-25, the gap being validation protocol rewritten after a quality-assurance review. Notes

taken on 2026-03-26 record Rafferty Osgood-Blaine praising that the account team escalated without being chased beside the complaint that reporting cannot be reconciled against the customer's own labour standard. Punch items numbering 0 remained at Woodland when acceptance test protocol execution was signed on 2023-05-23. Idunn Haraldsen was reached by video call with a follow-up email and gave a re-buy answer of probably, with a shorter initial term, which sits oddly beside the praise that implementation engineers were candid about what the pilot would not prove. The slip of 48 days at Tracy on integration test in the customer sandbox is the one the customer raises first, and it traces to floor coating and line marking delayed by a contractor dispute. Ferdinand Achterberg-Lo, introduced by Caldera Cold Chain as a willing reference, nonetheless complained that traffic management degrades when aisle congestion exceeds design load. Turning to Tracy, the tracker puts integration test in the customer sandbox at 2023-02-22 where the plan said 2023-01-05, the gap being floor coating and line marking delayed by a contractor dispute.

Schedule 2.3 - Caldera Cold Chain: relationship map and coverage of contacts

Contact	Role	Function	Interviewed	Influence on renewal
Devrim Oksuz	Category Manager for Automation	procurement	yes	primary decision maker
Hallie Tsuruoka	Chief Supply Chain Officer	executive sponsor	yes	signs the order form
Gustav Rennhack	inventory control supervisor	quality	no	raises most of the tickets

Entitlement consumption by site: Caldera Cold Chain

This Caldera Cold Chain review sets out that one site consistently underuses its entitlement and is a downgrade candidate, and the schedule below is the evidence for it, drawn from 4 records rather than from a summary prepared for us. The Woodland building adds a second point: seasonal peaks lift utilisation above entitlement at two sites simultaneously. Devrim Oksuz's team settled on this level of detail for a reason, because an account-level average at Caldera Cold Chain conceals the site-to-site variation that decides how this relationship behaves at renewal. Tracy triggered credits of $5,376 following resolution attainment of 84 per cent. Credits reaching Caldera Cold Chain in the November cycle came to $0, and the balance remains as no exception raised. Recurring at Tracy through that quarter was traffic deadlock at an aisle intersection, across 26 tickets. Caldera Cold Chain's ledger for April shows overage of 0 picks, credits of $1,484 and a variance of $-100, resolved: meter reconciliation accepted by both parties. Patterson (CAL-02) logged 22 tickets in 2023-Q1 including 0 at severity one, with resolution attainment of 77 per cent. Caldera Cold Chain carried overage in July of 15,847 picks, which the invoice reflects and the site disputes on definition rather than count. Although the console reported no outage at Tracy, the site still raised 29 tickets in 2023-Q1. Overage in March at Caldera Cold Chain came to 0 picks, entitlement having been fixed at signature.

Diligence on Caldera Cold Chain carries two qualifications: utilisation above one hundred per cent does not automatically produce a charge, and picks metered exclude re-picks that the site says should be excluded. The Tracy site also observed, when the schedule was put to the customer, that the densest site runs closest to its entitlement and produces most of the overage, which is consistent with what the documents show without being proved by them. Caldera Cold Chain management accepted the schedule as a fair summary of the underlying records, subject to those qualifications and to the open items listed in this review. Recurring at Tracy through that quarter was fleet console latency during shift change, across 17 tickets. Consumption recorded for Caldera Cold Chain in October ran to 114,444 picks, 12,202 of them above entitlement. Although the console reported no outage at Tracy, the site still raised 7 tickets in 2024-Q2. Reconciling April leaves Caldera Cold Chain with a variance of $0, no exception raised. Tracy produced 2 severity-one events in 2023-Q1, and resolution attainment of 97 per cent triggered credits of $0. Caldera Cold Chain's ledger for September shows overage of 0 picks, credits of $0 and a variance of $-199, no exception raised. Tracy (CAL-01) shows interface message backlog after a host restart as the complaint theme, on 17 tickets in 2023-Q4. Console records for November at Caldera Cold Chain show 101,451 picks, and the invoice followed at $44,800.

Schedule 2.4 - Caldera Cold Chain: entitlement against consumption by site

Site	Period	Picks metered	Entitled picks	Utilisation (%)	Overage exposure
Tracy (CAL-01)	2023-01	30,881	32,133	96.1	nil
Tracy (CAL-01)	2023-02	21,670	32,133	67.4	nil
Tracy (CAL-01)	2023-03	34,034	32,133	105.9	$570
Tracy (CAL-01)	2023-04	28,946	32,133	90.1	nil

Pilot scope and success criteria at Caldera Cold Chain

The pilot at Tracy ran a single zone rather than a whole building, which is the right way to de-risk a deployment and the wrong way to prove a business case. The charter defined what the pilot had to show, and that charter is dated before go-live on 2023-03-20, which is better governance than several accounts in this pack can show. Two criteria were written qualitatively, and predictably those are the two the parties later argued about. Punch items numbering 0 remained at Tracy when final acceptance certificate was signed on 2023-10-02. Tracy (CAL-01) met response targets 97 per cent of the time, and resolution targets rather less often. On the evidence from Tracy, conditional acceptance certificate slipped 21 days and the status now reads conditional acceptance issued. Reviewing the 2024-Q4 quarter, Tracy shows 17 tickets and a recurring theme of fleet console latency during shift change. Certificates held at Woodland put final acceptance certificate on 2024-01-07 and explain the 14 days by customer master-data cleanup for slot dimensions ran long. Tracy (CAL-01) met response targets 88 per cent of the time, and resolution targets rather less often. Deployment records at Woodland leave acceptance test protocol execution closing on 2023-05-23, status closed. Tracy triggered credits of $5,691 following resolution attainment of 81 per cent. Certificates held at Patterson put integration test in the customer sandbox on 2023-05-18 and explain the 10 days by customer IT change-freeze extended by two sprint cycles. Woodland (CAL-03) met response targets 88 per cent of the time, and resolution targets rather less often. Woodland is one of the few sites where network and radio-frequency readiness review ran to plan, closing on 2022-10-19.

Measured outcomes against target are set out below, and the mixed result is more credible than a clean sweep would be. Fleet availability and rate were satisfied, while recovery time from traffic deadlock and interface message success were the criteria where the pilot did not reach the stated target. The source of each measurement is recorded deliberately, because a figure from the fleet console and a figure from the host system are not the same evidence even when they agree. Recurring at Patterson through that quarter was charger handshake failures on one dock, across 7 tickets. Although Tracy treats it as outside anyone's control, pilot cell go-live still moved to 2023-03-20 for host WMS upgrade re-sequenced the interface build. Attainment figures from Woodland show 89 per cent on response against 92 per cent on resolution. Woodland (CAL-03) cleared acceptance test protocol execution on 2023-05-23 against a plan of 2023-04-30, a difference of 23 days recorded against supplier lead time on the conveyor tie-in guard package. Although the console reported no outage at Woodland, the site still raised 12 tickets in 2023-Q2. Woodland closed network and radio-frequency readiness review on 2022-10-19 and the certificate records 0 open items. Recurring at Tracy through that quarter was interface message backlog after a host restart, across 7 tickets. Certificates held at Tracy put wms interface build and message mapping on 2022-12-23 and explain the 27 days by host WMS upgrade re-sequenced the interface build. Tracy (CAL-01) met response targets 99 per cent of the time, and resolution targets rather less often. Woodland lost time because customer master-data cleanup for slot dimensions ran long, and final acceptance certificate moved to 2024-01-07 from a planned 2023-12-24. Tracy (CAL-01) logged 29 tickets in 2022-Q4 including 0 at severity one, with resolution attainment of 78 per cent.

Hallie Tsuruoka regarded the pilot as sufficient to justify the rollout and said so without hedging, which is the commercially relevant fact whatever the criteria table shows. The pilot succeeded on the only test that mattered commercially, and the unmet criteria became punch items rather than reasons to stop. The deferral resurfaces at renewal, visible in this account as an argument at acceptance about what had actually been promised. Woodland (CAL-03) is where safety scanner nuisance stops near the pack line recurs, and the quarter to 2024-Q3 shows 0 severity-one events. Deployment records at Patterson leave network and radio-frequency readiness review closing on 2023-02-10, status closed. Tracy (CAL-01) met response targets 94 per cent of the time, and resolution targets rather less often. The slip of 61 days at Woodland on conditional acceptance certificate is the one the customer raises first, and it traces to host WMS upgrade re-sequenced the interface build. Attainment figures from Tracy show 86 per cent on response against 81 per cent on resolution. Certificates held at Tracy put pilot cell go-live on 2023-03-20 and explain the 3 days by host WMS upgrade re-sequenced the interface build. Reviewing the 2024-Q1 quarter, Tracy shows 29 tickets and a recurring theme of charger handshake failures on one dock. Woodland lost time because host WMS upgrade re-sequenced the interface build, and conditional acceptance certificate moved to 2023-09-06 from a planned 2023-07-07. Tracy (CAL-01) logged 29 tickets in 2022-Q4 including 0 at severity one, with resolution attainment of 78 per cent. Punch items numbering 0 remained at Tracy when final acceptance certificate was signed on 2023-10-02. Patterson reached 83 per cent on response and 74 per cent on resolution, and credits of $4,694 followed.

Caldera Cold Chain - benefit-claim testing

Caldera Cold Chain's file puts on the record that baseline periods were chosen after the fact in most cases, and the schedule below is the evidence for it, drawn from 3 records rather than from a summary prepared for us. The Caldera Cold Chain workpaper reads the same way: the strongest evidenced claim concerns labour and the weakest concerns accuracy. The Tracy site carries the detail at record level deliberately, because an account-level average at Caldera Cold Chain conceals the site-to-site variation that decides how this relationship behaves at renewal. Consumption recorded for Caldera Cold Chain in April ran to 108,717 picks, 6,475 of them above entitlement. Notes taken on 2026-03-08 record Ferdinand Achterberg-Lo praising that implementation engineers were candid about what the pilot would not prove beside the complaint that traffic management degrades when aisle congestion exceeds design load. Overage in May at Caldera Cold Chain came to 0 picks, entitlement having been fixed at signature. Notes taken on 2026-03-24 record Noor Al-Rashidi praising that implementation engineers were candid about what the pilot would not prove beside the complaint that the analytics module is priced separately and was never budgeted. Meter and invoice diverge in March at Caldera Cold Chain by $-208, which the parties treat as no exception raised. Because Rowland Achterhof sees the fleet every shift, the first question put was about reduction in temporary labour headcount at peak, answered at 35 per cent. Caldera Cold Chain in June shows entitlement of 102,242 against consumption of 117,663, recorded as partially credited; the balance remains contested. Ferdinand Achterberg-Lo answered on re-buy with no, would run a competitive process first and would not be drawn further on price or on term.

Devrim Oksuz comes with two limits on its use: magnitudes are as stated verbally and were not rounded by us, and an unverifiable claim is not a false claim and is not treated as one. Hallie Tsuruoka also observed, when the schedule was put to the customer, that one claim is contradicted by the customer's own operations pack, which is consistent with what the documents show without being proved by them. The Tracy team accepted the schedule as a fair summary of the underlying records, subject to those qualifications and to the open items listed in this review. Because Beatrix Ollenhauer sees the fleet every shift, the first question put was about dock-to-stock hours on inbound receipts, answered at 36 per cent. Caldera Cold Chain's position for March was settled as re-invoiced after the entitlement was corrected, on an invoice of $44,800. Beatrix Ollenhauer, introduced by Caldera Cold Chain as a willing reference, nonetheless complained that the analytics module is priced separately and was never budgeted. Meter and invoice diverge in January at Caldera Cold Chain by $-149, which the parties treat as no exception raised. Beatrix Ollenhauer, introduced by Caldera Cold Chain as a willing reference, nonetheless complained that the analytics module is priced separately and was never budgeted. Caldera Cold Chain metered April at 92,103 picks against an entitlement of 102,242, and was invoiced $44,800. Notes taken on 2026-03-26 record Rafferty Osgood-Blaine praising that the account team escalated without being chased beside the complaint that reporting cannot be reconciled against the customer's own labour standard. Caldera Cold Chain was credited in October with $0, against an invoiced amount of $48,704.

Schedule 2.5 - Caldera Cold Chain: quantified benefit claims tested against evidence

Interviewee	Metric claimed	Claimed improvement	Evidence offered	Diligence verdict
Ferdinand Achterberg-Lo	dock-to-stock hours on inbound receipts	16 per cent	labour management system extract	not substantiated: the interviewee described it as an impression
Rowland Achterhof	reduction in temporary labour headcount at peak	35 per cent	weekly operations pack	contradicted: the customer's own report shows a smaller improvement
Beatrix Ollenhauer	dock-to-stock hours on inbound receipts	36 per cent	weekly operations pack	partly substantiated: one of the two sites supports the claim

Churn, downgrades and win-back evidence around Caldera Cold Chain

Ossuary Ridge Beverage is the clearest loss in the base, having let a 24-month contract expire without extension, and the stated reason is instructive rather than embarrassing: the case-picking mix at those two sites never suited a tote-based fleet. That is a sales-qualification issue, not reliability, and it bears on how much weight an investor should give the company's win rate. Caldera Cold Chain sits at the opposite end of that spectrum on fit, which is part of why it was selected for this file. Patterson (CAL-02) shows interface message backlog after a host restart as the complaint theme, on 6 tickets in 2023-Q2. Looking across at Northriding Automotive, the renewal structure reads as auto-renew in twenty-four-month increments. Patterson reached 83 per cent on response and 74 per cent on resolution, and credits of $4,694

followed. Arborlight Home is described internally as hot on volume, hostile on overage billing, and the movement expected at renewal is expansion signed for a second wave of robots. Reviewing the 2023-Q3 quarter, Tracy shows 26 tickets and a recurring theme of traffic deadlock at an aisle intersection. Brackenhill Pet Nutrition deploys 116 robots across 3 sites and is banded at 1.1m to 1.3m. Although the console reported no outage at Patterson, the site still raised 22 tickets in 2023-Q1. Ossuary Ridge Beverage carries an ACV band of 0.4m to 0.5m on net thirty, and the risk trigger identified there is unresolved severity-one recurrence in the freezer aisles. Attainment figures from Tracy show 91 per cent on response against 68 per cent on resolution. Grindelwald Precision carries an ACV band of 0.3m to 0.4m on net thirty, and the risk trigger identified there is labour agreement restricts further automation at the site. Reviewing the 2022-Q4 quarter, Tracy shows 29 tickets and a recurring theme of traffic deadlock at an aisle intersection.

Sablecreek Apparel shows the quieter pattern, a partial non-renewal in which the returns line was withdrawn while two sites continued, and the site now shows a zero-robot entry that the company's site count still includes. Counting a dormant site inflates the footprint, and the same treatment appears in one other account, so the aggregate site figure in the company's materials needs a footnote rather than a correction. The win-back record is sparse, amounting in two cases to a proposal issued and never followed up. Attainment figures from Woodland show 95 per cent on response against 97 per cent on resolution. Halcyon Medical Supply renews on 2026-05-24, and Juniper Halloran-Voss owns that conversation on the company side. Ticket volume reached 22 at Woodland in 2023-Q3, of which 0 were classified at the highest severity. Terrence Aboagye-Whitlock runs procurement at Crestmoor Office Products, where the executive sponsor is Marguerite Delacroix-Ohm. Severity being classified by the vendor, Woodland recorded only 1 events at the top severity in 2022-Q4. Set beside Ossuary Ridge Beverage, which runs 2 sites at 43 robots, this account is the better documented of the two. Recurring at Patterson through that quarter was safety scanner nuisance stops near the pack line, across 12 tickets. Comparison with Grindelwald Precision is instructive, since it prices on per-robot subscription with an on-site engineer allocation and pays on net thirty. Severity being classified by the vendor, Patterson recorded only 1 events at the top severity in 2023-Q4. Halcyon Medical Supply renews on 2026-05-24, and Juniper Halloran-Voss owns that conversation on the company side. Tracy (CAL-01) shows interface message backlog after a host restart as the complaint theme, on 7 tickets in 2024-Q2.

Stated reasons for loss were taken from customer correspondence where it exists and from the account owner's note where it does not, and the two sources differ in tone more than in substance. Customers cite fit and price, whereas the internal notes lean toward customer readiness and internal politics at the account, which is the direction one would expect from a vendor record. Competitive displacement does not appear in the loss record, which is a genuinely favourable feature of the loss profile and is stated as such. Ticket volume reached 22 at Woodland in 2023-Q3, of which 0 were classified at the highest severity. Tidewater Marine Spares is banded at 20 to 40 per cent on renewal, the trigger being budget reallocated to a conveyor retrofit. Although the console reported no outage at Woodland, the site still raised 12 tickets in 2023-Q2. Brackenhill Pet Nutrition deploys 116 robots across 3 sites and is banded at 1.1m to 1.3m. Severity being classified by the vendor, Patterson recorded only 1 events at the top severity in 2024-Q2. Looking across at Zephyrine Beauty Brands, the renewal structure reads as initial term running; expansion order under negotiation. Although the console reported no outage at Patterson, the site still raised 9 tickets in 2024-Q3. Looking across at Northriding Automotive, the renewal structure reads as auto-renew in twenty-four-month increments. Woodland produced 1 severity-one events in 2022-Q4, and resolution attainment of 84 per cent triggered credits of $4,456. Looking across at Northriding Automotive, the renewal structure reads as auto-renew in twenty-four-month increments. Patterson (CAL-02) met response targets 82 per cent of the time, and resolution targets rather less often.

Comparison of the accounts given supporting the Caldera Cold Chain review

Caldera Cold Chain's file makes clear that management has not addressed one topic in writing at all, and the schedule below is the evidence for it, drawn from 3 records rather than from a summary prepared for us. The Caldera Cold Chain workpaper goes further: the document trail supports the customer more often than it supports management. The Caldera Cold Chain estate chose this grain deliberately, because an account-level average at Caldera Cold Chain conceals the site-to-site variation that decides how this relationship behaves at renewal. Patterson (CAL-02) reached network and radio-frequency readiness review on 2023-02-10, status closed, with 0 punch items open at that gate. Rafferty Osgood-Blaine, the warehouse systems manager, spoke on 2026-03-26 and praised that the account team escalated without being chased, answering the re-buy question with yes, and has already sponsored an expansion. Once

Patterson had dealt with facility readiness: mezzanine steel and charger bays incomplete, the site completed final acceptance certificate on 2024-03-31. Notes taken on 2026-03-26 record Rafferty Osgood-Blaine praising that the account team escalated without being chased beside the complaint that reporting cannot be reconciled against the customer's own labour standard. Acceptance slipped 48 days at Tracy before integration test in the customer sandbox was recorded as closed. Asked what worked, Dashiell Okonjo said that spare-parts logistics were faster than the incumbent conveyor vendor; asked what did not, the answer was that on-site engineering days were consumed by defects rather than tuning. Progress at Woodland shows acceptance test protocol execution signed off on 2023-05-23 against 2023-04-30 as planned. Noor Al-Rashidi gave 47 minutes on 2026-03-24 and made one quantified claim, on order cycle time from release to pack-out, of 20 per cent.

Devrim Oksuz should be read with two qualifications: a topic omitted here is a topic on which nothing was contested, and customer statements are summarised from interview notes and were not put back for approval. Hallie Tsuruoka also observed, when the schedule was put to the customer, that on two topics the documents are silent and the disagreement cannot be closed, which is consistent with what the documents show without being proved by them. The Tracy team accepted the schedule as a fair summary of the underlying records, subject to those qualifications and to the open items listed in this review. Timing at Tracy held for acceptance test protocol execution, which closed on 2023-04-05 as scheduled. Because Noor Al-Rashidi sees the fleet every shift, the first question put was about order cycle time from release to pack-out, answered at 20 per cent. Where the plan assumed a clean run, Tracy instead took 61 extra days over site survey and slotting scan, for labour agreement consultation with the site works council. Noor Al-Rashidi gave 47 minutes on 2026-03-24 and made one quantified claim, on order cycle time from release to pack-out, of 20 per cent. Patterson logged punch-list closure review on 2023-12-21; the customer attributes the slip to customer master-data cleanup for slot dimensions ran long. Dashiell Okonjo, the site general manager, spoke on 2026-04-13 and praised that spare-parts logistics were faster than the incumbent conveyor vendor, answering the re-buy question with no, would run a competitive process first. Woodland (CAL-03) cleared acceptance test protocol execution on 2023-05-23 against a plan of 2023-04-30, a difference of 23 days recorded against supplier lead time on the conveyor tie-in guard package. Ferdinand Achterberg-Lo, the inventory control supervisor, spoke on 2026-03-08 and praised that implementation engineers were candid about what the pilot would not prove, answering the re-buy question with no, would run a competitive process first.

Schedule 2.6 - Caldera Cold Chain: said, shown and reported compared

Topic	Customer statement	Document evidence	Company reported position	Diligence treatment
credit owed	the site states it happened later than recorded	the message log supports the company	management reports a smaller exposure	carried forward for management response
response time attainment	the interviewee accepts the company account	the executed certificate supports the customer	management reports full attainment	treated as immaterial to value but noted
go-live date	the customer describes the position as unresolved	the message log supports the company	management has not addressed the point in writing	recorded as an open disagreement
