MARKET SURVEY STATISTICAL APPENDIX - RECORD 004

Helioscope Robotics, Inc. - diligence file reference MARKET_APPENDICES-004

1. Research question and scope

Kessler Ward Research publishes this volume on pay-to-play, pro rata and most-favoured-nation terms alongside the term survey covering financings from 1 July 2023 to 31 March 2026. It asks how often continuing-participation and information-parity rights are granted, and to whom, over 1,216 admitted observations of which 1,045 disclose participation right granted. Admission required that the financing be one of the financings whose investors' rights agreement was obtained.

Framed as a research question, denominators for participation right granted rest on the disclosing subset alone, which means the count admitted under the screen is stated in the register caption and is never adjusted afterwards to improve a result. The share reported for most-favoured-nation clause is 4.3%, from 45 observations in a denominator of 1,045, and pay-to-play with pull-back is measured on that denominator so neither absorbs the other's cases. The publisher notes that instruments bearing on participation right granted came from 120 contributing firms for this edition.

Under the treatment adopted here, an observation contributes to pay-to-play, pro rata and most-favoured-nation terms once only, and the coding rule is applied uniformly even where the reviewer preferred the alternative, and that alternative is recorded against the decision. 25 observations were coded pay-to-play with pull-back, giving 2.4% against the 1,045 disclosing this field; pro rata to major investors only is reported beside it on the same base for comparability. A qualification applies here: where machine vision observations are thin, the participation right granted share is reported with its count rather than as a percentage alone.

By way of scope, an observation contributes to pay-to-play, pro rata and most-favoured-nation terms once only, and the measurement window is fixed at the edition date, and observations are not backfilled once the edition has been published. pro rata to all preferred accounts for 412 of the 1,045 disclosing observations, 39.4% of them, and pay-to-play with pull-back is tabulated on that identical base rather than on the wider population. Set against that, for the 2024 Q4 sub-period the participation right granted count is published with its own denominator rather than folded into the annual figure.

In this volume's presentation, limitations recorded for participation right granted bear directly on how far its shares travel: a change since the prior edition is attributed to new observations, to a recode, or to a correction, and never left unexplained. Reading the participation right granted partition row by row, none of these carries 247 observations and 23.6%, measured against 1,045; the pro rata to major investors only row is additive with it. On the same evidence, geographic coverage for participation right granted is strongest in Nordics and is reported as thin elsewhere.

Register 4.1 - observations screened for the pay-to-play, pro rata and most-favoured-nation terms population (1,216 admitted)

1. Research question and scope - part 2 of 3

A further extract of the 1. Research question and scope appears here, taken in order from the point at which the previous part ended. The break is editorial.

No basis of compilation changes at this break; whatever the 1. Research question and scope recorded about scope and method at its head continues to apply. Pagination alone determines where it falls.

Register 4.1 - observations screened for the pay-to-play, pro rata and most-favoured-nation terms population (1,216 admitted) (continued, part 2 of 3)

2. Population definition and screen

In the analyst's working notes, where pay-to-play, pro rata and most-favoured-nation terms is concerned the screen admits an observation only when a change since the prior edition is attributed to new observations, to a recode, or to a correction, and never left unexplained. For pro rata to major investors only the register yields 316 observations, 30.2% of the 1,045 that disclose participation right granted, and the adjacent row for pro rata to all preferred is computed identically. The working papers add that the screen for this volume reads: financings whose investors' rights agreement was obtained, measured over the window to 31 March 2026.

As between the variants, coding practice for participation right granted departs from loose market usage, in that the measurement window is fixed at the edition date, and observations are not backfilled once the edition has been published. pro rata to all preferred accounts for 412 of the 1,045 disclosing observations, 39.4% of them, and most-favoured-nation clause is tabulated on that identical base rather than on the wider population. The working papers add that where logistics software observations are thin, the participation right granted share is reported with its count rather than as a percentage alone.

Considered field by field, denominators for participation right granted rest on the disclosing subset alone, which means the screen is stated in full, so a reader who disagrees with it can identify which observations their own screen would drop. The share reported for pay-to-play with pull-back is 2.4%, from 25 observations in a denominator of 1,045, and pay-to-play with pull-back is measured on that denominator so neither absorbs the other's cases. Against that background, for the 2026 Q2 sub-period the participation right granted count is published with its own denominator rather than folded into the annual figure.

At the level of the individual instrument, sensitivity analysis reruns each participation right granted share under alternative treatments, and a term recorded as undisclosed is withheld from the denominator, the only treatment consistent with the disclosure rate printed beside it. Applied to pay-to-play with pull-back, that gives 25 observations against a usable denominator of 1,045, or 2.4%; the comparison against none of these rests on the same denominator, so the variants remain additive within the participation right granted partition. Against that background, observations sourced from a executed instrument are admitted for participation right granted but marked so in the source tier column.

3. Source hierarchy and admissibility

For the avoidance of doubt, sensitivity analysis reruns each participation right granted share under alternative treatments, and the coding rule is applied uniformly even where the reviewer preferred the alternative, and that alternative

is recorded against the decision. Applied to pro rata to major investors only, that gives 316 observations against a usable denominator of 1,045, or 30.2%; the comparison against pay-to-play with pull-back rests on the same denominator, so the variants remain additive within the participation right granted partition. Worth stating plainly: observations sourced from a unverified secondary are admitted for participation right granted but marked so in the source tier column.

Before any tabulation, composition of the pay-to-play, pro rata and most-favoured-nation terms sample changes between editions, and the screen is stated in full, so a reader who disagrees with it can identify which observations their own screen would drop. For pro rata to major investors only the register yields 316 observations, 30.2% of the 1,045 that disclose participation right granted, and the adjacent row for pro rata to major investors only is computed identically. Against that background, geographic coverage for participation right granted is strongest in Canada and is reported as thin elsewhere.

As the screen was applied, any engagement's own transaction is excluded from the pay-to-play, pro rata and most-favoured-nation terms comparison population, so the same company appearing in two financings contributes two observations only where both fall inside the measurement window. Reading the participation right granted partition row by row, pay-to-play with pull-back carries 25 observations and 2.4%, measured against 1,045; the pay-to-play with pull-back row is additive with it. In the same connection, observations sourced from a contemporaneous press report are admitted for participation right granted but marked so in the source tier column.

Once the exclusions are applied, where pay-to-play, pro rata and most-favoured-nation terms is concerned the screen admits an observation only when quartile spread carries information a mean conceals, particularly where a handful of financings sit far from the centre of the distribution. The participation right granted partition puts 247 observations under none of these and reports 23.6% on a denominator of 1,045; pro rata to all preferred is drawn from the same base so the two shares may be added. The composition tables show that observations sourced from a contemporaneous press report are admitted for participation right granted but marked so in the source tier column.

4. Coding rules for ambiguous instruments

As the screen was applied, composition of the pay-to-play, pro rata and most-favoured-nation terms sample changes between editions, and a term recorded as undisclosed is withheld from the denominator, the only treatment consistent with the disclosure rate printed beside it. 247 observations were coded none of these, giving 23.6% against the 1,045 disclosing this field; none of these is reported beside it on the same base for comparability. As a practical matter, geographic coverage for participation right granted is strongest in US Midwest and is reported as thin elsewhere.

Before any tabulation, definitions governing participation right granted are stated before any figure is reported, since the coding rule is applied uniformly even where the reviewer preferred the alternative, and that alternative is recorded against the decision. 25 observations were coded pay-to-play with pull-back, giving 2.4% against the 1,045 disclosing this field; pro rata to major investors only is reported beside it on the same base for comparability. The methodology note adds that instruments bearing on participation right granted came from 129 contributing firms for this edition.

In this volume's presentation, quartiles rather than means are published for pay-to-play, pro rata and most-favoured-nation terms, since an instrument obtained after the edition closed is held for the next edition rather than folded into a published table. 247 observations were coded none of these, giving 23.6% against the 1,045 disclosing this field; none of these is reported beside it on the same base for comparability. The reviewer also recorded that within Series C the participation right granted partition is reported separately, because its disclosure rate differs from the population rate.

As between the variants, the population underlying pay-to-play, pro rata and most-favoured-nation terms was fixed before any participation right granted figure was computed, because the published share and the composition-adjusted share appear side by side, and where they diverge the attribution column says which. The participation right granted partition puts 25 observations under pay-to-play with pull-back and reports 2.4% on a denominator of 1,045; pro rata to major investors only is drawn from the same base so the two shares may be added. Equally, observations sourced from a contemporaneous press report are admitted for participation right granted but marked so in the source tier column.

Table 4.2 - participation right granted frequency on a usable denominator of 1,045

Participation right granted	Observations	Usable denominator	Share of usable	Prior edition share	Movement
pro rata to all preferred	412	1,045	39.4%	45.0%	-5.6 pp
pro rata to major investors only	316	1,045	30.2%	41.0%	-10.7 pp
pay-to-play with pull-back	25	1,045	2.4%	9.9%	-7.5 pp
most-favoured-nation clause	45	1,045	4.3%	1.7%	+2.6 pp
none of these	247	1,045	23.6%	2.5%	+21.1 pp
not disclosed (excluded from denominator)	171	1,216	14.1%	-	-

5. Disclosure treatment and denominators

Of the 1,216 observations admitted for pay-to-play, pro rata and most-favoured-nation terms, 1,045 disclose participation right granted and 171 do not, a disclosure rate of 85.9%. Shares for participation right granted are therefore computed on 1,045; treating the silent observations as though the term were absent would understate how often it is taken.

On a strict reading of the screen, composition of the pay-to-play, pro rata and most-favoured-nation terms sample changes between editions, and an observation excluded on review keeps its exclusion reason in the register, so the screen can be audited rather than trusted. Applied to pro rata to all preferred, that gives 412 observations against a usable denominator of 1,045, or 39.4%; the comparison against pay-to-play with pull-back rests on the same denominator, so the variants remain additive within the participation right granted partition. A related point: geographic coverage for participation right granted is strongest in Canada and is reported as thin elsewhere.

Read against the prior edition, coding practice for participation right granted departs from loose market usage, in that the published share and the composition-adjusted share appear side by side, and where they diverge the attribution column says which. Reading the participation right granted partition row by row, pro rata to all preferred carries 412 observations and 39.4%, measured against 1,045; the most-favoured-nation clause row is additive with it. Set against that, the screen for this volume reads: financings whose investors' rights agreement was obtained, measured over the window to 31 March 2026.

Against the source hierarchy, this volume treats pay-to-play, pro rata and most-favoured-nation terms as its measured field, and a change since the prior edition is attributed to new observations, to a recode, or to a correction, and never left unexplained. Reading the participation right granted partition row by row, pay-to-play with pull-back carries 25 observations and 2.4%, measured against 1,045; the pro rata to all preferred row is additive with it. In the same connection, the screen for this volume reads: financings whose investors' rights agreement was obtained, measured over the window to 31 March 2026.

As a matter of coding, outliers in the pay-to-play, pro rata and most-favoured-nation terms tables are retained and documented rather than trimmed, which means the published share and the composition-adjusted share appear side by side, and where they diverge the attribution column says which. pro rata to major investors only accounts for 316 of the 1,045 disclosing observations, 30.2% of them, and most-favoured-nation clause is tabulated on that identical base rather than on the wider population. Worth stating plainly: where autonomous systems observations are thin, the participation right granted share is reported with its count rather than as a percentage alone.

6. Reported distributions

On a strict reading of the screen, because instruments disclose participation right granted unevenly, the coding rule is applied uniformly even where the reviewer preferred the alternative, and that alternative is recorded against the decision. Counting only disclosing observations, pro rata to major investors only reaches 30.2%, being 316 of 1,045; the figure for none of these shares that denominator and no observation is counted twice between them. Set against that, geographic coverage for participation right granted is strongest in US South and is reported as thin elsewhere.

By way of scope, an analyst recoding a participation right granted observation must record the alternative, because quartile spread carries information a mean conceals, particularly where a handful of financings sit far from the centre of

the distribution. Reading the participation right granted partition row by row, pro rata to all preferred carries 412 observations and 39.4%, measured against 1,045; the pay-to-play with pull-back row is additive with it. The working papers add that instruments bearing on participation right granted came from 120 contributing firms for this edition.

Once the exclusions are applied, any engagement's own transaction is excluded from the pay-to-play, pro rata and most-favoured-nation terms comparison population, so the count admitted under the screen is stated in the register caption and is never adjusted afterwards to improve a result. Applied to pro rata to major investors only, that gives 316 observations against a usable denominator of 1,045, or 30.2%; the comparison against most-favoured-nation clause rests on the same denominator, so the variants remain additive within the participation right granted partition. Against that background, within Series C the participation right granted partition is reported separately, because its disclosure rate differs from the population rate.

Framed as a research question, quartiles rather than means are published for pay-to-play, pro rata and most-favoured-nation terms, since the measurement window is fixed at the edition date, and observations are not backfilled once the edition has been published. For pro rata to all preferred the register yields 412 observations, 39.4% of the 1,045 that disclose participation right granted, and the adjacent row for pro rata to all preferred is computed identically. On the same evidence, within Series A the participation right granted partition is reported separately, because its disclosure rate differs from the population rate.

6. Reported distributions - part 2 of 3

A further extract of the 6. Reported distributions appears here, taken in order from the point at which the previous part ended.

Readers should carry the 6. Reported distributions's stated conventions across the break, since this part adds no definition of its own. No row is omitted at the join.

Register 4.1 - observations screened for the pay-to-play, pro rata and most-favoured-nation terms population (1,216 admitted) (continued, part 2 of 3)

Participation right granted observation	Stage	Sector	Geography	Quarter	Source tier	Status	Exclusion reason
		software			us press report		

7. Segment cuts

For a reader auditing the screen, the population underlying pay-to-play, pro rata and most-favoured-nation terms was fixed before any participation right granted figure was computed, because the reader can reconstruct every reported percentage from the numerator and the denominator printed in the same row. The participation right granted partition puts 25 observations under pay-to-play with pull-back and reports 2.4% on a denominator of 1,045; pro rata to major investors only is drawn from the same base so the two shares may be added. The composition tables show that instruments bearing on participation right granted came from 131 contributing firms for this edition.

Looking across the window, trend commentary on pay-to-play, pro rata and most-favoured-nation terms separates a movement in terms from a movement in the sample, and the published share and the composition-adjusted share appear side by side, and where they diverge the attribution column says which. Reading the participation right granted partition row by row, none of these carries 247 observations and 23.6%, measured against 1,045; the pay-to-play with pull-back row is additive with it. Set against that, where autonomous systems observations are thin, the participation right granted share is reported with its count rather than as a percentage alone.

Framed as a research question, sensitivity analysis reruns each participation right granted share under alternative treatments, and a change since the prior edition is attributed to new observations, to a recode, or to a correction, and never left unexplained. For none of these the register yields 247 observations, 23.6% of the 1,045 that disclose participation right granted, and the adjacent row for pro rata to major investors only is computed identically. Equally, observations sourced from a unverified secondary are admitted for participation right granted but marked so in the source tier column.

On a strict reading of the screen, two provisions in tension over participation right granted are resolved by the coding rule rather than by judgement, and the same company appearing in two financings contributes two observations only where both fall inside the measurement window. 45 observations were coded most-favoured-nation clause, giving 4.3% against the 1,045 disclosing this field; pay-to-play with pull-back is reported beside it on the same base for comparability. By the same token, instruments bearing on participation right granted came from 110 contributing firms for this edition.

Table 4.9 - movement in participation right granted against the prior edition, by cause

Participation right granted movement	Prior edition	This edition	Underlying change	Attributed cause
pro rata to all preferred	42.5%	44.0%	68 new observations	new observations only
pro rata to major investors only	33.4%	44.5%	96 new observations	new observations only
pay-to-play with pull-back	30.7%	48.6%	87 new observations	recode of two observations
most-favoured-nation clause	59.7%	57.2%	62 new observations	recode of two observations
none of these	58.2%	37.6%	95 new observations	recode of two observations

8. Trend analysis and composition change

Framed as a research question, any engagement's own transaction is excluded from the pay-to-play, pro rata and most-favoured-nation terms comparison population, so the count admitted under the screen is stated in the register caption and is never adjusted afterwards to improve a result. The participation right granted partition puts 316 observations under pro rata to major investors only and reports 30.2% on a denominator of 1,045; most-favoured-nation clause is drawn from the same base so the two shares may be added. A qualification applies here: instruments bearing on participation right granted came from 123 contributing firms for this edition.

On the methodology, where pay-to-play, pro rata and most-favoured-nation terms is concerned the screen admits an observation only when the published share and the composition-adjusted share appear side by side, and where they diverge the attribution column says which. Applied to most-favoured-nation clause, that gives 45 observations against a usable denominator of 1,045, or 4.3%; the comparison against pay-to-play with pull-back rests on the same denominator, so the variants remain additive within the participation right granted partition. The methodology note adds that where

industrial robotics observations are thin, the participation right granted share is reported with its count rather than as a percentage alone.

By way of scope, source tiering governs what may be asserted about participation right granted, so the count admitted under the screen is stated in the register caption and is never adjusted afterwards to improve a result. Applied to none of these, that gives 247 observations against a usable denominator of 1,045, or 23.6%; the comparison against none of these rests on the same denominator, so the variants remain additive within the participation right granted partition. The register records that only where a filed instrument established it is the $20m to $50m revenue band applied to participation right granted.

Against the source hierarchy, definitions governing participation right granted are stated before any figure is reported, since the count admitted under the screen is stated in the register caption and is never adjusted afterwards to improve a result. For pay-to-play with pull-back the register yields 25 observations, 2.4% of the 1,045 that disclose participation right granted, and the adjacent row for none of these is computed identically. It bears noting that only where a filed instrument established it is the $2m to $8m revenue band applied to participation right granted.

9. Sensitivity to missing data

Considered field by field, an analyst recoding a participation right granted observation must record the alternative, because a change since the prior edition is attributed to new observations, to a recode, or to a correction, and never left unexplained. The share reported for most-favoured-nation clause is 4.3%, from 45 observations in a denominator of 1,045, and none of these is measured on that denominator so neither absorbs the other's cases. One consequence is that instruments bearing on participation right granted came from 136 contributing firms for this edition.

As between the variants, any engagement's own transaction is excluded from the pay-to-play, pro rata and most-favoured-nation terms comparison population, so a reader needing the underlying instrument can identify it from the register reference without asking the publisher for the file. none of these accounts for 247 of the 1,045 disclosing observations, 23.6% of them, and pro rata to all preferred is tabulated on that identical base rather than on the wider population. The composition tables show that only where a filed instrument established it is the $8m to $20m revenue band applied to participation right granted.

At the level of the individual instrument, definitions governing participation right granted are stated before any figure is reported, since the count admitted under the screen is stated in the register caption and is never adjusted afterwards to improve a result. 316 observations were coded pro rata to major investors only, giving 30.2% against the 1,045 disclosing this field; most-favoured-nation clause is reported beside it on the same base for comparability. Set against that, observations sourced from a executed instrument are admitted for participation right granted but marked so in the source tier column.

In the analyst's working notes, because instruments disclose participation right granted unevenly, the disclosing subset is smaller than the population, and reporting against the population would overstate how often the term is absent. Counting only disclosing observations, pro rata to all preferred reaches 39.4%, being 412 of 1,045; the figure for none of these shares that denominator and no observation is counted twice between them. The publisher notes that geographic coverage for participation right granted is strongest in DACH and is reported as thin elsewhere.

10. Comparison with the prior edition

On a strict reading of the screen, an observation contributes to pay-to-play, pro rata and most-favoured-nation terms once only, and no figure here rests on a single unverified secondary source without that being visible in the source tier column. 316 observations were coded pro rata to major investors only, giving 30.2% against the 1,045 disclosing this field; pro rata to major investors only is reported beside it on the same base for comparability. Equally, where autonomous systems observations are thin, the participation right granted share is reported with its count rather than as a percentage alone.

Read against the prior edition, readers comparing this edition's participation right granted tables with the prior edition should note that the coding rule is applied uniformly even where the reviewer preferred the alternative, and that alternative is recorded against the decision. The participation right granted partition puts 25 observations under pay-to-play with pull-back and reports 2.4% on a denominator of 1,045; none of these is drawn from the same base so the two

shares may be added. Equally, the screen for this volume reads: financings whose investors' rights agreement was obtained, measured over the window to 31 March 2026.

In the analyst's working notes, silence about participation right granted is not a negative observation here: the reader can reconstruct every reported percentage from the numerator and the denominator printed in the same row. For pro rata to major investors only the register yields 316 observations, 30.2% of the 1,045 that disclose participation right granted, and the adjacent row for pay-to-play with pull-back is computed identically. By the same token, only where a filed instrument established it is the $2m to $8m revenue band applied to participation right granted.

Looking across the window, silence about participation right granted is not a negative observation here: an instrument obtained after the edition closed is held for the next edition rather than folded into a published table. Counting only disclosing observations, none of these reaches 23.6%, being 247 of 1,045; the figure for pro rata to all preferred shares that denominator and no observation is counted twice between them. As a practical matter, geographic coverage for participation right granted is strongest in DACH and is reported as thin elsewhere.

Table 4.3 - pay-to-play, pro rata and most-favoured-nation terms distribution by stage, with documented outliers

Stage within the participation_rights population	n	Minimum	25th percentile	Median	75th percentile	Maximum	Outliers
Series A	79	$29,000,000	$34,000,000	$39,000,000	$58,000,000	$103,000,000	0
Series B	71	$13,000,000	$25,000,000	$37,000,000	$51,000,000	$65,000,000	3
Series C	54	$8,000,000	$14,000,000	$23,000,000	$34,000,000	$74,000,000	0
Series D and later	49	$13,000,000	$25,000,000	$36,000,000	$42,000,000	$61,000,000	2
Growth	95	$9,000,000	$15,000,000	$21,000,000	$39,000,000	$68,000,000	1

11. Limitations

In this volume's presentation, an observation contributes to pay-to-play, pro rata and most-favoured-nation terms once only, and an instrument obtained after the edition closed is held for the next edition rather than folded into a published table. Applied to pro rata to major investors only, that gives 316 observations against a usable denominator of 1,045, or 30.2%; the comparison against most-favoured-nation clause rests on the same denominator, so the variants remain additive within the participation right granted partition. For completeness, for the 2025 Q2 sub-period the participation right granted count is published with its own denominator rather than folded into the annual figure.

Judged by the disclosure rate, quartiles rather than means are published for pay-to-play, pro rata and most-favoured-nation terms, since the screen is stated in full, so a reader who disagrees with it can identify which observations their own screen would drop. For pay-to-play with pull-back the register yields 25 observations, 2.4% of the 1,045 that disclose participation right granted, and the adjacent row for pro rata to major investors only is computed identically. The publisher notes that observations sourced from a executed instrument are admitted for participation right granted but marked so in the source tier column.

Framed as a research question, readers comparing this edition's participation right granted tables with the prior edition should note that the reader can reconstruct every reported percentage from the numerator and the denominator printed in the same row. Counting only disclosing observations, pro rata to all preferred reaches 39.4%, being 412 of 1,045; the figure for none of these shares that denominator and no observation is counted twice between them. Equally, where fleet telematics observations are thin, the participation right granted share is reported with its count rather than as a percentage alone.

As between the variants, silence about participation right granted is not a negative observation here: the measurement window is fixed at the edition date, and observations are not backfilled once the edition has been published. Reading the participation right granted partition row by row, none of these carries 247 observations and 23.6%, measured against 1,045; the pay-to-play with pull-back row is additive with it. The reviewer also recorded that for the 2023 Q2 sub-period the participation right granted count is published with its own denominator rather than folded into the annual figure.

12. Definitions

As a matter of coding, source tiering governs what may be asserted about participation right granted, so the count admitted under the screen is stated in the register caption and is never adjusted afterwards to improve a result. For pro rata to all preferred the register yields 412 observations, 39.4% of the 1,045 that disclose participation right granted, and the adjacent row for pro rata to all preferred is computed identically. In the same connection, the screen for this volume reads: financings whose investors' rights agreement was obtained, measured over the window to 31 March 2026.

As a matter of coding, an observation contributes to pay-to-play, pro rata and most-favoured-nation terms once only, and the coding rule is applied uniformly even where the reviewer preferred the alternative, and that alternative is recorded against the decision. The share reported for none of these is 23.6%, from 247 observations in a denominator of 1,045, and pro rata to major investors only is measured on that denominator so neither absorbs the other's cases. In the same connection, observations sourced from a executed instrument are admitted for participation right granted but marked so in the source tier column.

As a matter of coding, field-level disclosure rates for participation right granted are published beside every share, so the screen is stated in full, so a reader who disagrees with it can identify which observations their own screen would drop. For pro rata to major investors only the register yields 316 observations, 30.2% of the 1,045 that disclose participation right granted, and the adjacent row for pro rata to all preferred is computed identically. The working papers add that observations sourced from a executed instrument are admitted for participation right granted but marked so in the source tier column.

Measured over the whole window, the population underlying pay-to-play, pro rata and most-favoured-nation terms was fixed before any participation right granted figure was computed, because a term recorded as undisclosed is withheld from the denominator, the only treatment consistent with the disclosure rate printed beside it. The participation right granted partition puts 25 observations under pay-to-play with pull-back and reports 2.4% on a denominator of 1,045; pro rata to all preferred is drawn from the same base so the two shares may be added. Against that background, observations sourced from a contemporaneous press report are admitted for participation right granted but marked so in the source tier column.
