MARKET SURVEY STATISTICAL APPENDIX - RECORD 010

Helioscope Robotics, Inc. - diligence file reference MARKET_APPENDICES-010

1. Research question and scope

Kessler Ward Research publishes this volume on down rounds, recapitalisations and structured terms alongside the term survey covering financings from 1 July 2023 to 31 March 2026. It asks how often a round prices below the prior round, and what structure accompanies it, over 1,033 admitted observations of which 847 disclose round outcome. The screen admitting them reads: financings where a prior priced round is identifiable for comparison.

As a matter of coding, limitations recorded for round outcome bear directly on how far its shares travel: an observation excluded on review keeps its exclusion reason in the register, so the screen can be audited rather than trusted. Counting only disclosing observations, recapitalisation reaches 15.0%, being 127 of 847; the figure for priced below prior round shares that denominator and no observation is counted twice between them. The register records that only where a filed instrument established it is the $8m to $20m revenue band applied to round outcome.

For the avoidance of doubt, coding practice for round outcome departs from loose market usage, in that the coding rule is applied uniformly even where the reviewer preferred the alternative, and that alternative is recorded against the decision. For priced above prior round the register yields 202 observations, 23.8% of the 847 that disclose round outcome, and the adjacent row for recapitalisation is computed identically. Against that background, observations sourced from a state or agency filing are admitted for round outcome but marked so in the source tier column.

By way of scope, this volume treats down rounds, recapitalisations and structured terms as its measured field, and the count admitted under the screen is stated in the register caption and is never adjusted afterwards to improve a result. Reading the round outcome partition row by row, structured with a ratchet carries 44 observations and 5.2%, measured against 847; the priced below prior round row is additive with it. The publisher notes that only where a filed instrument established it is the over $50m revenue band applied to round outcome.

Before any tabulation, quartiles rather than means are published for down rounds, recapitalisations and structured terms, since the count admitted under the screen is stated in the register caption and is never adjusted afterwards to improve a result. Counting only disclosing observations, flat to prior round reaches 23.3%, being 197 of 847; the figure for priced above prior round shares that denominator and no observation is counted twice between them. In the same connection, the screen for this volume reads: financings where a prior priced round is identifiable for comparison, measured over the window to 31 March 2026.

Register 10.1 - observations screened for the down rounds, recapitalisations and structured terms population (1,033 admitted)

1. Research question and scope - part 2 of 3

Where the 1. Research question and scope was interrupted by the page, it picks up again below, and the numbering is continuous throughout the schedule. The break is editorial.

Definitions given once for the 1. Research question and scope are relied on again rather than restated, the compilation basis being identical.

Register 10.1 - observations screened for the down rounds, recapitalisations and structured terms population (1,033 admitted) (continued, part 2 of 3)

1. Research question and scope - part 3 of 3

The 1. Research question and scope begun above continues from this point, and its row references run consecutively across the parts rather than restarting. Pagination alone determines where it falls.

Whatever caveat the 1. Research question and scope carried at its head travels with these rows, and no additional caveat attaches to this part. No row is omitted at the join.

Register 10.1 - observations screened for the down rounds, recapitalisations and structured terms population (1,033 admitted) (continued, part 3 of 3)

2. Population definition and screen

At the level of the individual instrument, readers comparing this edition's round outcome tables with the prior edition should note that the reader can reconstruct every reported percentage from the numerator and the denominator printed in the same row. Reading the round outcome partition row by row, priced above prior round carries 202 observations and 23.8%, measured against 847; the structured with a ratchet row is additive with it. Equally, observations sourced from a executed instrument are admitted for round outcome but marked so in the source tier column.

Considered field by field, definitions governing round outcome are stated before any figure is reported, since an observation excluded on review keeps its exclusion reason in the register, so the screen can be audited rather than trusted. The round outcome partition puts 127 observations under recapitalisation and reports 15.0% on a denominator of 847; priced above prior round is drawn from the same base so the two shares may be added. Against that background, where fleet telematics observations are thin, the round outcome share is reported with its count rather than as a percentage alone.

For the avoidance of doubt, quartiles rather than means are published for down rounds, recapitalisations and structured terms, since a reader needing the underlying instrument can identify it from the register reference without asking the publisher for the file. flat to prior round accounts for 197 of the 847 disclosing observations, 23.3% of them, and structured with a ratchet is tabulated on that identical base rather than on the wider population. A related point: instruments bearing on round outcome came from 133 contributing firms for this edition.

Put in terms of denominators, research design for round outcome begins from the population rather than the tabulation, because no figure here rests on a single unverified secondary source without that being visible in the source tier column. For priced above prior round the register yields 202 observations, 23.8% of the 847 that disclose round outcome, and the adjacent row for structured with a ratchet is computed identically. The methodology note adds that where warehouse automation observations are thin, the round outcome share is reported with its count rather than as a percentage alone.

3. Source hierarchy and admissibility

Against the source hierarchy, limitations recorded for round outcome bear directly on how far its shares travel: the reader can reconstruct every reported percentage from the numerator and the denominator printed in the same row. The round outcome partition puts 197 observations under flat to prior round and reports 23.3% on a denominator of 847; structured with a ratchet is drawn from the same base so the two shares may be added. The methodology note adds that where manufacturing software observations are thin, the round outcome share is reported with its count rather than as a percentage alone.

Judged by the disclosure rate, the population underlying down rounds, recapitalisations and structured terms was fixed before any round outcome figure was computed, because the tier an observation came from constrains what this appendix will assert about it, and that constraint is printed rather than assumed. The share reported for structured with a

ratchet is 5.2%, from 44 observations in a denominator of 847, and structured with a ratchet is measured on that denominator so neither absorbs the other's cases. As a practical matter, only where a filed instrument established it is the over $50m revenue band applied to round outcome.

Set beside the composition tables, limitations recorded for round outcome bear directly on how far its shares travel: no figure here rests on a single unverified secondary source without that being visible in the source tier column. Reading the round outcome partition row by row, priced below prior round carries 277 observations and 32.7%, measured against 847; the recapitalisation row is additive with it. Set against that, the screen for this volume reads: financings where a prior priced round is identifiable for comparison, measured over the window to 31 March 2026.

Considered field by field, coding practice for round outcome departs from loose market usage, in that a reader needing the underlying instrument can identify it from the register reference without asking the publisher for the file. The share reported for flat to prior round is 23.3%, from 197 observations in a denominator of 847, and priced above prior round is measured on that denominator so neither absorbs the other's cases. The working papers add that the screen for this volume reads: financings where a prior priced round is identifiable for comparison, measured over the window to 31 March 2026.

4. Coding rules for ambiguous instruments

As a matter of coding, an analyst recoding a round outcome observation must record the alternative, because the screen is stated in full, so a reader who disagrees with it can identify which observations their own screen would drop. recapitalisation accounts for 127 of the 847 disclosing observations, 15.0% of them, and recapitalisation is tabulated on that identical base rather than on the wider population. By the same token, only where a filed instrument established it is the $20m to $50m revenue band applied to round outcome.

Measured over the whole window, any engagement's own transaction is excluded from the down rounds, recapitalisations and structured terms comparison population, so the tier an observation came from constrains what this appendix will assert about it, and that constraint is printed rather than assumed. Applied to recapitalisation, that gives 127 observations against a usable denominator of 847, or 15.0%; the comparison against priced below prior round rests on the same denominator, so the variants remain additive within the round outcome partition. Equally, geographic coverage for round outcome is strongest in DACH and is reported as thin elsewhere.

As a matter of coding, research design for round outcome begins from the population rather than the tabulation, because a change since the prior edition is attributed to new observations, to a recode, or to a correction, and never left unexplained. Reading the round outcome partition row by row, priced below prior round carries 277 observations and 32.7%, measured against 847; the flat to prior round row is additive with it. A related point: for the 2025 Q4 sub-period the round outcome count is published with its own denominator rather than folded into the annual figure.

Turning to the register, the population underlying down rounds, recapitalisations and structured terms was fixed before any round outcome figure was computed, because a change since the prior edition is attributed to new observations, to a recode, or to a correction, and never left unexplained. recapitalisation accounts for 127 of the 847 disclosing observations, 15.0% of them, and priced above prior round is tabulated on that identical base rather than on the wider population. Equally, instruments bearing on round outcome came from 116 contributing firms for this edition.

Table 10.2 - round outcome frequency on a usable denominator of 847

Round outcome	Observations	Usable denominator	Share of usable	Prior edition share	Movement
priced above prior round	202	847	23.8%	18.2%	+5.7 pp
flat to prior round	197	847	23.3%	12.5%	+10.7 pp
priced below prior round	277	847	32.7%	31.1%	+1.7 pp
recapitalisation	127	847	15.0%	25.1%	-10.2 pp
structured with a ratchet	44	847	5.2%	13.1%	-7.9 pp
not disclosed (excluded from denominator)	186	1,033	18.0%	-	-

5. Disclosure treatment and denominators

Round outcome is disclosed by 847 of the 1,033 observations this volume admits, leaving 186 silent, a disclosure rate of 82.0%. Shares for round outcome are therefore computed on 847; treating the silent observations as though the term were absent would understate how often it is taken.

In the analyst's working notes, field-level disclosure rates for round outcome are published beside every share, so the same company appearing in two financings contributes two observations only where both fall inside the measurement window. The round outcome partition puts 202 observations under priced above prior round and reports 23.8% on a denominator of 847; structured with a ratchet is drawn from the same base so the two shares may be added. The register records that instruments bearing on round outcome came from 138 contributing firms for this edition.

Put in terms of denominators, an observation contributes to down rounds, recapitalisations and structured terms once only, and the count admitted under the screen is stated in the register caption and is never adjusted afterwards to improve a result. Reading the round outcome partition row by row, priced above prior round carries 202 observations and 23.8%, measured against 847; the flat to prior round row is additive with it. For completeness, the screen for this volume reads: financings where a prior priced round is identifiable for comparison, measured over the window to 31 March 2026.

As a matter of coding, where down rounds, recapitalisations and structured terms is concerned the screen admits an observation only when the measurement window is fixed at the edition date, and observations are not backfilled once the edition has been published. The round outcome partition puts 202 observations under priced above prior round and reports 23.8% on a denominator of 847; flat to prior round is drawn from the same base so the two shares may be added. A related point: the screen for this volume reads: financings where a prior priced round is identifiable for comparison, measured over the window to 31 March 2026.

Once the exclusions are applied, an observation contributes to down rounds, recapitalisations and structured terms once only, and the tier an observation came from constrains what this appendix will assert about it, and that constraint is printed rather than assumed. The round outcome partition puts 277 observations under priced below prior round and reports 32.7% on a denominator of 847; priced below prior round is drawn from the same base so the two shares may be added. By the same token, geographic coverage for round outcome is strongest in US Northeast and is reported as thin elsewhere.

6. Reported distributions

Against the source hierarchy, any engagement's own transaction is excluded from the down rounds, recapitalisations and structured terms comparison population, so quartile spread carries information a mean conceals, particularly where a handful of financings sit far from the centre of the distribution. 277 observations were coded priced below prior round, giving 32.7% against the 847 disclosing this field; priced below prior round is reported beside it on the same base for comparability. The composition tables show that geographic coverage for round outcome is strongest in US South and is reported as thin elsewhere.

Turning to the register, sensitivity analysis reruns each round outcome share under alternative treatments, and the count admitted under the screen is stated in the register caption and is never adjusted afterwards to improve a result. Applied to priced above prior round, that gives 202 observations against a usable denominator of 847, or 23.8%; the comparison against recapitalisation rests on the same denominator, so the variants remain additive within the round outcome partition. A related point: where logistics software observations are thin, the round outcome share is reported with its count rather than as a percentage alone.

At the level of the individual instrument, contributing firms supply instruments bearing on round outcome rather than summaries of them, and the count admitted under the screen is stated in the register caption and is never adjusted afterwards to improve a result. 277 observations were coded priced below prior round, giving 32.7% against the 847 disclosing this field; priced below prior round is reported beside it on the same base for comparability. Equally, instruments bearing on round outcome came from 136 contributing firms for this edition.

As recorded in the decision log, the population underlying down rounds, recapitalisations and structured terms was fixed before any round outcome figure was computed, because the disclosing subset is smaller than the population, and reporting against the population would overstate how often the term is absent. 277 observations were coded priced below

prior round, giving 32.7% against the 847 disclosing this field; flat to prior round is reported beside it on the same base for comparability. Set against that, geographic coverage for round outcome is strongest in Nordics and is reported as thin elsewhere.

6. Reported distributions - part 2 of 3

For length, the 6. Reported distributions is presented in 3 parts; this is the next of them, and the rows continue the same sequence. The parts are to be read together.

Nothing in this part varies how the 6. Reported distributions was compiled, and the headings given at the start remain the operative ones. No row is omitted at the join.

Register 10.1 - observations screened for the down rounds, recapitalisations and structured terms population (1,033 admitted) (continued, part 2 of 3)

6. Reported distributions - part 3 of 3

Set out next is the balance of the 6. Reported distributions, in the sequence in which the rows were originally compiled. No row is omitted at the join.

Definitions given once for the 6. Reported distributions are relied on again rather than restated, the compilation basis being identical. Pagination alone determines where it falls.

Register 10.1 - observations screened for the down rounds, recapitalisations and structured terms population (1,033 admitted) (continued, part 3 of 3)

7. Segment cuts

Judged by the disclosure rate, the population underlying down rounds, recapitalisations and structured terms was fixed before any round outcome figure was computed, because the disclosing subset is smaller than the population, and reporting against the population would overstate how often the term is absent. Applied to priced above prior round, that gives 202 observations against a usable denominator of 847, or 23.8%; the comparison against flat to prior round rests on the same denominator, so the variants remain additive within the round outcome partition. As a practical matter, where fleet telematics observations are thin, the round outcome share is reported with its count rather than as a percentage alone.

In the publisher's own terms, where down rounds, recapitalisations and structured terms is concerned the screen admits an observation only when the reader can reconstruct every reported percentage from the numerator and the denominator printed in the same row. Counting only disclosing observations, priced above prior round reaches 23.8%, being 202 of 847; the figure for priced below prior round shares that denominator and no observation is counted twice between them. Against that background, geographic coverage for round outcome is strongest in Canada and is reported as thin elsewhere.

On the methodology, definitions governing round outcome are stated before any figure is reported, since no figure here rests on a single unverified secondary source without that being visible in the source tier column. Reading the round outcome partition row by row, recapitalisation carries 127 observations and 15.0%, measured against 847; the recapitalisation row is additive with it. A qualification applies here: instruments bearing on round outcome came from 119 contributing firms for this edition.

Against the source hierarchy, segment cuts of round outcome describe the observed sample only, and an observation excluded on review keeps its exclusion reason in the register, so the screen can be audited rather than trusted. priced below prior round accounts for 277 of the 847 disclosing observations, 32.7% of them, and recapitalisation is tabulated on that identical base rather than on the wider population. Set against that, for the 2025 Q2 sub-period the round outcome count is published with its own denominator rather than folded into the annual figure.

Table 10.3 - down rounds, recapitalisations and structured terms distribution by stage, with documented outliers

Stage within the structured population	n	Minimum	25th percentile	Median	75th percentile	Maximum	Outliers
Series A	208	$27,000,000	$35,000,000	$48,000,000	$61,000,000	$69,000,000	0
Series B	215	$19,000,000	$27,000,000	$30,000,000	$50,000,000	$92,000,000	1
Series C	68	$24,000,000	$36,000,000	$42,000,000	$58,000,000	$88,000,000	3
Series D and later	208	$11,000,000	$23,000,000	$35,000,000	$47,000,000	$89,000,000	1
Growth	232	$20,000,000	$25,000,000	$37,000,000	$43,000,000	$84,000,000	0

8. Trend analysis and composition change

Considered field by field, denominators for round outcome rest on the disclosing subset alone, which means the tier an observation came from constrains what this appendix will assert about it, and that constraint is printed rather than assumed. For priced below prior round the register yields 277 observations, 32.7% of the 847 that disclose round outcome, and the adjacent row for flat to prior round is computed identically. Against that background, geographic coverage for round outcome is strongest in UK and Ireland and is reported as thin elsewhere.

So far as disclosure permits, sensitivity analysis reruns each round outcome share under alternative treatments, and the measurement window is fixed at the edition date, and observations are not backfilled once the edition has been published. For structured with a ratchet the register yields 44 observations, 5.2% of the 847 that disclose round outcome, and the adjacent row for flat to prior round is computed identically. The methodology note adds that the screen for this volume reads: financings where a prior priced round is identifiable for comparison, measured over the window to 31 March 2026.

On a strict reading of the screen, the population underlying down rounds, recapitalisations and structured terms was fixed before any round outcome figure was computed, because a reader needing the underlying instrument can identify it from the register reference without asking the publisher for the file. 202 observations were coded priced above prior round, giving 23.8% against the 847 disclosing this field; recapitalisation is reported beside it on the same base for comparability. Worth stating plainly: observations sourced from a unverified secondary are admitted for round outcome but marked so in the source tier column.

For a reader auditing the screen, segment cuts of round outcome describe the observed sample only, and the reader can reconstruct every reported percentage from the numerator and the denominator printed in the same row. Counting only disclosing observations, priced above prior round reaches 23.8%, being 202 of 847; the figure for structured with a ratchet shares that denominator and no observation is counted twice between them. It follows that instruments bearing on round outcome came from 123 contributing firms for this edition.

9. Sensitivity to missing data

Considered field by field, this volume treats down rounds, recapitalisations and structured terms as its measured field, and a term recorded as undisclosed is withheld from the denominator, the only treatment consistent with the disclosure rate printed beside it. For structured with a ratchet the register yields 44 observations, 5.2% of the 847 that disclose round outcome, and the adjacent row for recapitalisation is computed identically. The publisher notes that within Series C the round outcome partition is reported separately, because its disclosure rate differs from the population rate.

For the avoidance of doubt, contributing firms supply instruments bearing on round outcome rather than summaries of them, and an instrument obtained after the edition closed is held for the next edition rather than folded into a published table. The round outcome partition puts 197 observations under flat to prior round and reports 23.3% on a denominator of 847; recapitalisation is drawn from the same base so the two shares may be added. The working papers add that within Series A the round outcome partition is reported separately, because its disclosure rate differs from the population rate.

Before any tabulation, because instruments disclose round outcome unevenly, the disclosing subset is smaller than the population, and reporting against the population would overstate how often the term is absent. Counting only disclosing observations, structured with a ratchet reaches 5.2%, being 44 of 847; the figure for priced below prior round shares that denominator and no observation is counted twice between them. On the same evidence, the screen for this volume reads: financings where a prior priced round is identifiable for comparison, measured over the window to 31 March 2026.

In the publisher's own terms, readers comparing this edition's round outcome tables with the prior edition should note that the published share and the composition-adjusted share appear side by side, and where they diverge the attribution column says which. For structured with a ratchet the register yields 44 observations, 5.2% of the 847 that disclose round outcome, and the adjacent row for priced below prior round is computed identically. It follows that within Series C the round outcome partition is reported separately, because its disclosure rate differs from the population rate.

10. Comparison with the prior edition

Looking across the window, readers comparing this edition's round outcome tables with the prior edition should note that a change since the prior edition is attributed to new observations, to a recode, or to a correction, and never left unexplained. 202 observations were coded priced above prior round, giving 23.8% against the 847 disclosing this field; priced above prior round is reported beside it on the same base for comparability. In the same connection, only where a filed instrument established it is the over $50m revenue band applied to round outcome.

As the screen was applied, field-level disclosure rates for round outcome are published beside every share, so no figure here rests on a single unverified secondary source without that being visible in the source tier column. The share reported for flat to prior round is 23.3%, from 197 observations in a denominator of 847, and priced below prior round is measured on that denominator so neither absorbs the other's cases. On the same evidence, where industrial robotics observations are thin, the round outcome share is reported with its count rather than as a percentage alone.

In the analyst's working notes, outliers in the down rounds, recapitalisations and structured terms tables are retained and documented rather than trimmed, which means an observation excluded on review keeps its exclusion reason in the register, so the screen can be audited rather than trusted. The share reported for flat to prior round is 23.3%, from 197 observations in a denominator of 847, and priced above prior round is measured on that denominator so neither absorbs the other's cases. The publisher notes that the screen for this volume reads: financings where a prior priced round is identifiable for comparison, measured over the window to 31 March 2026.

Framed as a research question, because instruments disclose round outcome unevenly, the coding rule is applied uniformly even where the reviewer preferred the alternative, and that alternative is recorded against the decision. Reading the round outcome partition row by row, structured with a ratchet carries 44 observations and 5.2%, measured against 847; the priced above prior round row is additive with it. One consequence is that where industrial robotics observations are thin, the round outcome share is reported with its count rather than as a percentage alone.

Table 10.4 - down rounds, recapitalisations and structured terms cell counts by sector and stage, each cell carrying its own denominator

Sector within the structured population	Series A	Series B	Series C	Series D and later	Growth	Row total
industrial robotics	23	25	11	13	27	99
warehouse automation	12	21	11	3	12	59
logistics software	33	8	6	27	9	83
supply-chain analytics	28	13	20	19	12	92
machine vision	34	3	20	19	14	90
autonomous	11	36	9	18	7	81

Sector within the structured population	Series A	Series B	Series C	Series D and later	Growth	Row total
systems						
manufacturing software	7	5	3	21	16	52
fleet telematics	35	11	26	4	4	80
Column total	183	122	106	124	101	636

11. Limitations

Measured over the whole window, because instruments disclose round outcome unevenly, the same company appearing in two financings contributes two observations only where both fall inside the measurement window. recapitalisation accounts for 127 of the 847 disclosing observations, 15.0% of them, and recapitalisation is tabulated on that identical base rather than on the wider population. As a practical matter, within Series A the round outcome partition is reported separately, because its disclosure rate differs from the population rate.

As the screen was applied, contributing firms supply instruments bearing on round outcome rather than summaries of them, and the published share and the composition-adjusted share appear side by side, and where they diverge the attribution column says which. The round outcome partition puts 44 observations under structured with a ratchet and reports 5.2% on a denominator of 847; recapitalisation is drawn from the same base so the two shares may be added. The register records that for the 2025 Q2 sub-period the round outcome count is published with its own denominator rather than folded into the annual figure.

As between the variants, trend commentary on down rounds, recapitalisations and structured terms separates a movement in terms from a movement in the sample, and the reader can reconstruct every reported percentage from the numerator and the denominator printed in the same row. For recapitalisation the register yields 127 observations, 15.0% of the 847 that disclose round outcome, and the adjacent row for flat to prior round is computed identically. The publisher notes that geographic coverage for round outcome is strongest in DACH and is reported as thin elsewhere.

For the avoidance of doubt, readers comparing this edition's round outcome tables with the prior edition should note that the reader can reconstruct every reported percentage from the numerator and the denominator printed in the same row. 44 observations were coded structured with a ratchet, giving 5.2% against the 847 disclosing this field; flat to prior round is reported beside it on the same base for comparability. A qualification applies here: observations sourced from a state or agency filing are admitted for round outcome but marked so in the source tier column.

12. Definitions

Framed as a research question, limitations recorded for round outcome bear directly on how far its shares travel: the screen is stated in full, so a reader who disagrees with it can identify which observations their own screen would drop. For recapitalisation the register yields 127 observations, 15.0% of the 847 that disclose round outcome, and the adjacent row for priced above prior round is computed identically. As a practical matter, within Series C the round outcome partition is reported separately, because its disclosure rate differs from the population rate.

As a matter of coding, because instruments disclose round outcome unevenly, no figure here rests on a single unverified secondary source without that being visible in the source tier column. Counting only disclosing observations, priced above prior round reaches 23.8%, being 202 of 847; the figure for recapitalisation shares that denominator and no observation is counted twice between them. The reviewer also recorded that within Growth the round outcome partition is reported separately, because its disclosure rate differs from the population rate.

So far as disclosure permits, quartiles rather than means are published for down rounds, recapitalisations and structured terms, since a term recorded as undisclosed is withheld from the denominator, the only treatment consistent with the disclosure rate printed beside it. For priced above prior round the register yields 202 observations, 23.8% of the 847 that disclose round outcome, and the adjacent row for priced above prior round is computed identically. As a practical matter, only where a filed instrument established it is the $2m to $8m revenue band applied to round outcome.

In the analyst's working notes, an analyst recoding a round outcome observation must record the alternative, because the tier an observation came from constrains what this appendix will assert about it, and that constraint is printed rather than assumed. recapitalisation accounts for 127 of the 847 disclosing observations, 15.0% of them, and priced

above prior round is tabulated on that identical base rather than on the wider population. The composition tables show that the screen for this volume reads: financings where a prior priced round is identifiable for comparison, measured over the window to 31 March 2026.

Read against the prior edition, denominators for round outcome rest on the disclosing subset alone, which means a term recorded as undisclosed is withheld from the denominator, the only treatment consistent with the disclosure rate printed beside it. 277 observations were coded priced below prior round, giving 32.7% against the 847 disclosing this field; recapitalisation is reported beside it on the same base for comparability. The register records that observations sourced from a executed instrument are admitted for round outcome but marked so in the source tier column.

Put in terms of denominators, outliers in the down rounds, recapitalisations and structured terms tables are retained and documented rather than trimmed, which means a term recorded as undisclosed is withheld from the denominator, the only treatment consistent with the disclosure rate printed beside it. Counting only disclosing observations, flat to prior round reaches 23.3%, being 197 of 847; the figure for priced below prior round shares that denominator and no observation is counted twice between them. For completeness, for the 2025 Q1 sub-period the round outcome count is published with its own denominator rather than folded into the annual figure.
