SPONSOR CAPITAL PARTNERS
MINUTES OF A MEETING OF THE INVESTMENT COMMITTEE
Date: 18 May 2026
Time: 10:00 a.m. Eastern Time
Place: the Sponsor's offices
Present
Committee members present: P. Isherwood (Chair), C. Nakamura, J. Farrow, L. Beaumont. Also present, by invitation and without a vote: the deal team responsible for Project Kestrel.
The Chair confirmed a quorum and called the meeting to order.
1. Purpose of the Meeting
The Chair explained that this meeting's purpose was to review the proposed financing plan for Project Kestrel ahead of the Board's next scheduled review, distinct from the Board's own oversight role, which is limited to the acquisition vehicle rather than the fund's capital commitment to it.
The Chair reminded the Committee that its own review complements, rather than duplicates, the Board of the acquisition vehicle's separate oversight: the Board considers the Transaction from the acquisition vehicle's own perspective, while the Committee considers the fund's capital commitment and the financing plan's own credit characteristics, including the interaction with Harborview's internal credit policy as the prospective lender.
2. Financing Plan Review
The deal team presented the financing plan as then structured: a sponsor equity contribution, a revolving credit facility, and a term loan, together with the assumption of the target's existing municipal conduit financing at closing. The deal team noted that the target's senior unsecured notes were expected to remain outstanding, subject to resolution of the change-of-control analysis then in progress.
The deal team stated that the plan was being sized against Harborview's internal credit policy hard gate of 5.50x Consolidated EBITDA and its minimum fixed-charge coverage ratio covenant of 1.25x, and that the Consolidated EBITDA build supporting those tests had not yet been finalized pending completion of the quality-of-earnings work.
C. Nakamura asked whether the addback schedule underlying the Consolidated EBITDA build had been reconciled to the credit agreement's own definition. The deal team responded that reconciliation was in progress and would be presented at the Committee's next meeting together with the final terms.
J. Farrow asked about the municipal conduit financing being assumed at closing rather than repaid, and what effect that treatment would have on the net debt build supporting the leverage calculation. The deal team responded that the assumed obligation would be included in net debt under the credit agreement's own definition, and that the deal team was separately tracking whether the purchase agreement's own net debt definition, used for price-adjustment purposes, would treat the same obligation consistently, noting that the two definitions are not necessarily interchangeable.
P. Isherwood (Chair) asked the deal team to summarize how the target's ratings on the corporate notes and on the municipal conduit bonds should be understood together, given that the two obligations sit on different rating agency scales. The deal team responded that the corporate notes' rating and the municipal bonds' rating are not directly comparable and should not be blended into a single view of the target's credit quality, and that the financing plan's own leverage-based approach, rather than either rating in isolation, was the primary basis for the Committee's decision.
L. Beaumont raised the target's outstanding senior unsecured notes and asked whether their change-of-control repurchase provision, if triggered, would require the financing plan to size committed funding for full participation by noteholders. The deal team confirmed that the provision requires both a change of control and a ratings condition, that the analysis of whether the ratings condition would be satisfied here was still in progress, and that the financing plan as presented already assumed, conservatively, that committed funding would need to cover full noteholder participation if the repurchase obligation is

triggered.

3. Credit Policy Compliance Status

The deal team reported that no exception under Harborview's internal credit policy was anticipated on the current base case, but that the rating-sensitivity assessment required wherever pro forma leverage approaches the policy's rating-sensitivity threshold had not yet been completed and would be presented together with the final financing terms.

The Chair asked the deal team to confirm, before the Committee's next meeting, which edition of Harborview's internal credit policy the deal team was relying on for the hard gate cited above, noting that the deal team should rely on the edition then in force as recorded by Harborview's own Committee Secretary, rather than any interim guidance that may have circulated during an earlier round of negotiation.

4. Resolutions

Upon motion duly made and seconded, the following resolution was adopted unanimously:

RESOLVED, that the deal team is authorized to proceed with preparation of commitment papers for the financing plan presented at this meeting, subject to completion of the Consolidated EBITDA build, the rating-sensitivity assessment, and the change-of-control analysis, each to be presented to the Committee before any commitment is executed.

FURTHER RESOLVED, that the deal team is directed to obtain, before the Committee's next meeting, the published government yield curve for the valuation date rather than relying on a prior-quarter model input, for use in any relative-value or make-whole analysis presented in connection with the financing plan.

J. Farrow asked when the Committee should expect to see the final terms for approval. The deal team responded that it expected to bring final terms to the Committee's next meeting, subject to completion of the outstanding items identified above, and that it would circulate an updated timeline promptly if any of those items slipped.

The Chair asked the deal team to confirm that the financing plan's sensitivity to the addback schedule, once the reconciliation to the credit agreement's own definition was complete, would be presented alongside the base case rather than in place of it, consistent with the sensitivity analysis the Committee expected to see at every stage of the financing plan's development.

L. Beaumont, the Committee's newest member, asked for background on why the fund's own governance documents required Investment Committee review of the financing plan in addition to the acquisition vehicle's own Board review. The Chair explained that the Board's review addresses the acquisition vehicle's own obligations, while the Committee's review addresses the fund's capital at risk and the fund's own relationship with Harborview as a prospective lender, which the Board is not positioned to assess on the fund's behalf.

The deal team also updated the Committee on the status of the data room the target had opened for confirmatory diligence, confirming that the index of documents made available had been reconciled against the deal team's own request list and that the outstanding items previously flagged to the Board were expected to be delivered before the Committee's next meeting.

The Chair asked that the Committee's own minutes of this meeting be circulated to members promptly for review, given the volume of open items discussed, and that any correction be submitted to the Chair before the minutes were entered into the Committee's permanent record.

5. Other Business

The Chair noted that the Board of the acquisition vehicle would separately receive a diligence update at its own next meeting, and that the deal team should ensure the two bodies' materials remained consistent with one another notwithstanding their different focus.

There being no other business, the meeting was adjourned.
